

## Unable to change the value of a data item during Animation using Net Express

When using the Examine feature of the Net Express Animator, if you click on the "Change" button a grayed out window will appear that will not permit you to change the value of the data item.

One possible cause is that one of the Micro Focus OCX modules was not registered properly during installation or that the version registered is too old.

The OCX is valueedit.ocx. That file can be found in c:\program files\common files\Micro Focus, where the last part of the directory structure could also be Merant, depending on the product installation that you have.

Go to a command prompt and then do a directory change to go to the above mentioned location and register the OCX, i.e. regsvr32 valueedit.ocx

If you are still experiencing the problem then I would suggest that you contact your local SupportLine office to pursue.

This is document number 17476 that is part of the Micro Focus Knowledge base that is available at <http://supportline.microfocus.com>
