

# **The new standard for terminal emulation**

---

## OVERVIEW

- Micro Focus is pleased to announce the general availability of RUMBA 8.2 and Web-to-Host 6.2, the latest versions of our premier terminal emulation suite. RUMBA connects a Windows desktop to mainframe, AS/400 (midrange) and UNIX environments. Often called “green screen” terminals, terminal emulators are the most used application when connecting to core business systems in enterprise environments. Web-to-Host (W2H) has all the power and functionality of RUMBA but instead of running as a desktop application, it runs within industry leading Web browsers.

## THREE REASONS TO CHOOSE MICRO FOCUS FOR TERMINAL EMULATION

### Work the way you want

- Using RUMBA or W2H, end users will be able to work smarter and more effectively than ever. Micro Focus has leveraged its heritage and experience in host connectivity to deliver a terminal emulation product that is reliable, secure, and built for performance.

### Increase productivity

- With RUMBA’s new interface, and expanded feature set, everyday tasks are streamlined and simplified. The user interface is more intuitive than ever, and an expanded feature set provides your business with choice to streamline processes and delivery higher quality service to your customers.

### Improve quality

- Protect confidential information with powerful encryption technologies while protecting external users with firewall friendly access. With RUMBA or W2H, organizations will continue running business operations with industry leading data security, integrity, and quality. The proven efficiency of the RUMBA terminal emulation solution ensures high quality service delivery.

## COMMITTED TO INNOVATION

- Every business faces change. Mitigating risk as a business changes is key to the successful implementing of any new initiative. Acquisitions, mergers, new operating platforms, security standards, hardware upgrades, regulatory compliance and consumer requests all contribute to the changes bombarding business. Organizations investing in Micro Focus can be confident that as the pace of business change accelerates, their terminal emulation solutions will always keep up. In addition, their Terminal Emulation solutions from Micro Focus will continue to offer cutting edge innovations to further propel their business forward to meet their business needs.
- In the past year, RUMBA and W2H have been updated with many new customer driven features including:
  - Windows 7 and modern browser platforms certification, RUMBA customers upgrading now or in the future are guaranteed compatibility
  - Enhanced end user productivity features, such as Microsoft Office integration, an improved end user experience offering tile and zoom capabilities, and dynamic linking support to enable business integration.
  - New UI Views – now RUMBA provides two different versions of the user interface, which users can switch between at any time.
    - Ribbon. Originally introduced by Microsoft Office 2007, this interface organizes commands into a ‘ribbon’ across the top of the application window. The commands shown are context sensitive and change according to the tab that has been selected. This delivers an improved and initiative emulation experience.
    - Classic. An interface similar to that used in previous versions of RUMBA, for users experienced with older versions of RUMBA and to provide a transition for old interface users to the new interface.
  - Support for Application Virtualization platforms such as Microsoft’s App-V, and Citrix’s XenApp products.

## THE BOTTOM LINE – DRIVING COST SAVINGS AND INCREASED REVENUE GENERATION THROUGH BUSINESS EFFICIENCY

➤ RUMBA 8.2, W2H 6.2 and FTP 4.5.2 are significant upgrades to already stable and successful products. Micro Focus believes in this market and continues to increase its investment in resources towards the active development of these products. As customers upgrade operating systems and browser platforms, there are two questions that need to be answered:

- 1) Will this product continue to run flawlessly, or will my business experience an outage?
- 2) Will this make my end users more productive, allowing me to reduce my costs?

The answer to both of these questions is YES. As customers upgrade operating systems and browser platforms, especially Windows 7 and Internet Explorer, RUMBA and W2H will work flawlessly as Micro Focus continues to invest and innovate in this technology.

Productivity features that are added to the product, like Office integration, dynamic linking, and the tile and zoom interface, will make end users more productive and expand options for business to further streamline business processes.

By choosing Micro Focus RUMBA and W2H, customers are getting more than terminal emulation products. They are getting a committed business partner dedicated to supporting, enhancing, protecting, and driving the success of their business – today, and well into the future.

Contact Micro Focus to learn how customers across all industries are saving money and enabling their end users to be more productive using RUMBA and W2H.

### About Micro Focus

Micro Focus, a member of the FTSE 250, provides innovative software that allows companies to dramatically improve the business value of their enterprise applications. Micro Focus Enterprise Application Modernization and Management software enables customers' business applications to respond rapidly to market changes and embrace modern architectures with reduced cost and risk.
