# Event Broker 1.0 Release Notes

This release introduces HPE Security ArcSight Data Platform Event Broker (ADP Event Broker). The ADP Event Broker 1.0 (ArcSightEventBroker-1.0.0.155.0) centralizes event processing, helps you to scale your ArcSight environment, and opens up ArcSight events to third party solutions. It enables you to take advantage of scalable, high-throughput, multi-broker clusters for publishing and subscribing to event data.

The ADP Event Broker provides a packaged version of Apache Kafka. After you install and configure an Event Broker Kafka broker or cluster of brokers, you can use ADP SmartConnectors to publish data, and subscribe to that data with ADP Logger, Apache Hadoop, or your own consumer.

The ADP Event Broker Administrator's Guide describes how to install, configure, and manage the Event Broker.

## Supported Platforms and Browsers

For details on Event Broker 1.0 platform and browser support, refer to the ADP Support Matrix document available from the [ArcSight Product Documentation Community on Protect 724](#).

## Event Broker Documentation

In addition to these Release Notes, the ArcSight Data Platform Support Matrix, and the ArcSight Data Platform Event Broker Administrator's Guide are available for this release. These documents are available in PDF format for download from the [ArcSight Product Documentation Community on Protect 724](#).

- *ArcSight Data Platform 2.0 Support Matrix*: Provides integrated support information such as platform and browser support for ADP Event Broker, Logger, and SmartConnectors.
- *ArcSight Data Platform Event Broker 1.0 Administrator's Guide*: Describes how to install, configure, and manage the ADP Event Broker. Available with your download in both PDF and HTML help format.

### **To open the Event Broker help files:**

1. Extract EventBroker\_Help.zip into a location of your choice.
2. Open Event\_Broker\_Help\EventBroker\_Help.htm to access the help system.

## Known Issues

The following known issues apply to this release.

Known issue:	Workaround
If you repeatedly install and uninstall the Event Broker into the same location, the uninstall wizard may not uninstall some files and folders on physical machines running RHEL 7.2. This issue does not occur on virtual machines or machines using another OS.	Delete <code>/home/\$USER/.com.zerog.registry.xml</code> and run the uninstall wizard again. Alternatively, delete the remaining files and folders manually.
Sometimes, the Event Broker Manager may refuse to start. Even though the <code>start-kafka-manager</code> script or service indicates that it has started, it is not running.	Delete the <code>install_dir/current/kafka-manager/RUNNING_PID</code> file and try starting the Event Broker Manager again.

# Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this system, click the link above and an email window opens with the following information in the subject line:

## **Feedback on Release Notes (Event Broker 1.0)**

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to [arc-doc@hpe.com](mailto:arc-doc@hpe.com).

We appreciate your feedback!
