Confidential computer software. Valid license from Micro Focus required for possession, use or copying. The information contained herein is subject to change without notice.

The only warranties for Micro Focus products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. Micro Focus shall not be liable for technical or editorial errors or omissions contained herein.

No portion of this product's documentation may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying, recording, or information storage and retrieval systems, for any purpose other than the purchaser's internal use, without the express written permission of Micro Focus.

Notwithstanding anything to the contrary in your license agreement for Micro Focus ArcSight software, you may reverse engineer and modify certain open source components of the software in accordance with the license terms for those particular components. See below for the applicable terms.

U.S. Governmental Rights. For purposes of your license to Micro Focus ArcSight software, "commercial computer software" is defined at FAR 2.101. If acquired by or on behalf of a civilian agency, the U.S. Government acquires this commercial computer software and/or commercial computer software documentation and other technical data subject to the terms of the Agreement as specified in 48 C.F.R. 12.212 (Computer Software) and 12.211 (Technical Data) of the Federal Acquisition Regulation ("FAR") and its successors. If acquired by or on behalf of any agency within the Department of Defense ("DOD"), the U.S. Government acquires this commercial computer software and/or commercial computer software documentation subject to the terms of the Agreement as specified in 48 C.F.R. 227.7202-3 of the DOD FAR Supplement ("DFARS") and its successors. This U.S. Government Rights Section 18.11 is in lieu of, and supersedes, any other FAR, DFARS, or other clause or provision that addresses government rights in computer software or technical data.

About this PDF Version of Online Help

This document is a PDF version of the online help. This PDF file is provided so you can easily print multiple topics from the help information or read the online help in PDF format. Because this content was originally created to be viewed as online help in a web browser, some topics may not be formatted properly. Some interactive topics may not be present in this PDF version. Those topics can be successfully printed from within the online help.

Document Revision History

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.

To check for recent updates or to verify that you are using the most recent edition of a document, go to [ArcSight Product Documentation Community on the Micro Focus Security Community](#).

SmartConnector for Sun ONE Directory Server File

This guide provides information for installing the SmartConnector for Sun ONE Directory Server Multiple Server File and the SmartConnector for Sun ONE Directory Server File and configuring the device for event collection.

Product Overview

Sun ONE Directory Server provides organizations with a single deployment platform for Web services, JavaServer Pages (JSP) and Java Servlet technologies, Microsoft Active Server Pages, PHP, and CGI.

This ArcSight SmartConnector lets you import events generated by the *SmartConnector for Sun ONE Directory Server File* device into the ArcSight System. See the section "Device Event Mapping to ArcSight Data Fields" later in this document for the specific events mapped to fields in the ArcSight database.

Configuring Sun ONE Directory Server to Send Events

The Sun ONE Directory Server provides three types of logs: Access, Errors, and Audit. The ArcSight SmartConnector processes the Access and Errors Logs (the Audit Log is not processed).

Configure the Access Log

To configure the access log for your directory:

- 1 On the top-level **Configuration** tab of the Server console, select the **Logs** icon, then select the **Access Log** tab.
- 2 If not already selected, check the **Enable Logging** checkbox to enable Access logging. (Access logging is enabled by default.)
- 3 In the **Log File** field, enter the full path and filename you want the directory to use for the Access log. This information will be needed when you install the SmartConnector. The default file is:

`ServerRootslapd-serverID/logs/access`
- 4 Set the maximum number of logs, log size and frequency, and Deletion Policy parameters.
- 5 When you finish making changes, click **Save**.

Configure the Errors Log

To configure the Errors log:

- 1 On the top-level **Configuration** tab of the Server console, select the **Logs** icon, then select the **Errors Log** tab.
- 2 If not already selected, check the **Enable Logging** checkbox to enable access logging. (Error logging is enabled by default.)
- 3 In the **Log File** field, enter the full path and filename you want the directory to use for the Errors log. This information will be needed when you install the SmartConector. The default file is:

`ServerRootslapd-serverID/logs/error`
- 4 Set the maximum number of logs, log size and frequency, and Deletion Policy parameters.

5 When you finish making changes, click **Save**.

Install the SmartConnector

The following sections provide instructions for installing and configuring your selected SmartConnector.

Prepare to Install Connector

Before you install any SmartConnectors, make sure that the ArcSight products with which the connectors will communicate have already been installed correctly (such as ArcSight ESM or ArcSight Logger).

For complete product information, read the *Administrator's Guide* as well as the *Installation and Configuration* guide for your ArcSight product before installing a new SmartConnector. If you are adding a connector to the ArcSight Management Center, see the *ArcSight Management Center Administrator's Guide* for instructions, and start the installation procedure at "Set Global Parameters (optional)" or "Select Connector and Add Parameter Information."

Before installing the SmartConnector, be sure the following are available:

- Local access to the machine where the SmartConnector is to be installed
- Administrator passwords

Install Core Software

Unless specified otherwise at the beginning of this guide, this SmartConnector can be installed on all ArcSight supported platforms; for the complete list, see the *SmartConnector Product and Platform Support* document, available from the Micro Focus SSO and Protect 724 sites.

- 1 Download the SmartConnector executable for your operating system from the Micro Focus SSO site.
- 2 Start the SmartConnector installation and configuration wizard by running the executable.

Follow the wizard through the following folder selection tasks and installation of the core connector software:

- Introduction
- Choose Install Folder
- Choose Shortcut Folder
- Pre-Installation Summary
- Installing...

3 When the installation of SmartConnector core component software is finished, the following window is displayed:

Set Global Parameters (optional)

If you choose to perform any of the operations shown in the following table, do so before adding your connector. You can set the following parameters:

Parameter	Setting
FIPS mode	Select 'Enabled' to enable FIPS compliant mode. To enable FIPS Suite B Mode, see the SmartConnector User Guide under "Modifying Connector Parameters" for instructions. Initially, this value is set to 'Disabled'.
Remote Management	Select 'Enabled' to enable remote management from ArcSight Management Center. When queried by the remote management device, the values you specify here for enabling remote management and the port number will be used. Initially, this value is set to 'Disabled'.

Parameter	Setting
Remote Management Listener Port	The remote management device will listen to the port specified in this field. The default port number is 9001.
Preferred IP Version	When both IPv4 and IPv6 IP addresses are available for the local host (the machine on which the connector is installed), you can choose which version is preferred. Otherwise, you will see only one selection. The initial setting is IPv4.

The following parameters should be configured only if you are using Micro Focus SecureData solutions to provide encryption. See the *Micro Focus SecureData Architecture Guide* for more information.

Parameter	Setting
Format Preserving Encryption	Data leaving the connector machine to a specified destination can be encrypted by selecting 'Enabled' to encrypt the fields identified in 'Event Fields to Encrypt' before forwarding events. If encryption is enabled, it cannot be disabled. Changing any of the encryption parameters again will require a fresh installation of the connector.
Format Preserving Policy URL	Enter the URL where the Micro Focus SecureData Server is installed.
Proxy Server (https)	Enter the proxy host for https connection if any proxy is enabled for this machine.
Proxy Port	Enter the proxy port for https connection if any proxy is enabled for this machine.
Format Preserving Identity	The Micro Focus SecureData client software allows client applications to protect and access data based on key names. This key name is referred to as the identity. Enter the user identity configured for Micro Focus SecureData.
Format Preserving Secret	Enter the secret configured for Micro Focus SecureData to use for encryption.
Event Fields to Encrypt	Recommended fields for encryption are listed; delete any fields you do not want encrypted and add any string or numeric fields you want encrypted. Encrypting more fields can affect performance, with 20 fields being the maximum recommended. Also, because encryption changes the value, rules or categorization could also be affected. Once encryption is enabled, the list of event fields cannot be edited.

After making your selections, click **Next**. A summary screen is displayed. Review the summary of your selections and click **Next**. Click **Continue** to return to proceed with "Add a Connector" window. Continue the installation procedure with "Select Connector and Add Parameter Information."

Select Connector and Add Parameter Information

1 Select **Add a Connector** and click **Next**. If applicable, you can enable FIPS mode and enable remote management later in the wizard after SmartConnector configuration.

2 Select **Sun ONE Directory Server File** and click **Next**.

3 Enter the required SmartConnector parameters to configure the SmartConnector, then click **Next**.

The image shows a Windows-style dialog box titled "Connector Setup". On the left side, there is a vertical panel with the "ArcSight" logo at the top, the word "Configure" below it, and the "MICRO FOCUS" logo at the bottom. The main area of the window is titled "Enter the parameter details". It contains two text input fields: "Access Log File Path" and "Error Log File Path". Each field has a small button with three dots (a file explorer icon) to its right. At the bottom of the window, there are three buttons: "< Previous", "Next >" (which is highlighted with a blue border), and "Cancel".

Enter the device details

accesslogfilepath errorlogfilepath

Add Remove Import Export

< Previous Next > Cancel

Parameter	Description
	For the Multiple Folder connector, enter parameter information in the table for each directory you will be monitoring.
Access Log File Path	Complete path and name of the directory containing the Access log files. See "Configuring the Access Log" for more information.
Errors Log File Path	Complete path and name of the directory containing the Errors log files. See "Configuring the Errors Log" for more information.

You can click the 'Export' button to export the host name data you have entered into the table into a CSV file; you can click the 'Import' button to select a CSV file to import into the table rather than add the data manually. See the "SmartConnector User's Guide" for more information.

Select a Destination

- 1 The next window asks for the destination type; select a destination and click **Next**. For information about the destinations listed, see the *ArcSight SmartConnector User Guide*.
- 2 Enter values for the destination. For the ArcSight Manager destination, the values you enter for **User** and **Password** should be the same ArcSight user name and password you created during the ArcSight Manager installation. Click **Next**.
- 3 Enter a name for the SmartConnector and provide other information identifying the connector's use in your environment. Click **Next**. The connector starts the registration process.
- 4 If you have selected ArcSight Manager as the destination, the certificate import window for the ArcSight Manager is displayed. Select **Import the certificate to the connector from destination** and click **Next**. (If you select **Do not import the certificate to connector from destination**, the connector installation will end.) The certificate is imported and the **Add connector Summary** window is displayed.

Complete Installation and Configuration

- 1 Review the **Add Connector Summary** and click **Next**. If the summary is incorrect, click **Previous** to make changes.
- 2 The wizard now prompts you to choose whether you want to run the SmartConnector as a stand-alone process or as a service. If you choose to run the connector as a stand-alone process, select **Leave as a standalone application**, click **Next**, and continue with step 5.
- 3 If you chose to run the connector as a service, with **Install as a service** selected, click **Next**. The wizard prompts you to define service parameters. Enter values for **Service Internal Name** and **Service Display Name** and select **Yes** or **No** for **Start the service automatically**. The **Install Service Summary** window is displayed when you click **Next**.
- 4 Click **Next** on the summary window.
- 5 To complete the installation, choose **Exit** and Click **Next**.

For instructions about upgrading the connector or modifying parameters, see the *SmartConnector User Guide*.

Run the SmartConnector

SmartConnectors can be installed and run in stand-alone mode, on Windows platforms as a Windows service, or on UNIX platforms as a UNIX daemon, depending upon the platform supported. On Windows platforms, SmartConnectors also can be run using shortcuts and optional Start menu entries.

If the connector is installed in stand-alone mode, it must be started manually and is not automatically active when a host is restarted. If installed as a service or daemon, the connector runs automatically when the host is restarted. For information about connectors running as services or daemons, see the *ArcSight SmartConnector User Guide*.

To run all SmartConnectors installed in stand-alone mode on a particular host, open a command window, go to `$ARCSIGHT_HOME\current\bin` and run: `arcsight connectors`

To view the SmartConnector log, read the file `$ARCSIGHT_HOME\current\logs\agent.log`; to stop all SmartConnectors, enter Ctrl+C in the command window.

Device Event Mapping to ArcSight Fields

The following section lists the mappings of ArcSight data fields to the device's specific event definitions. See the *ArcSight Console User's Guide* for more information about the ArcSight data fields.

Sun ONE Directory Server Access Log Mappings

ArcSight ESM Field	Device-Specific Field
Additional data	attrs
Additional data	base
Additional data	encryptionMethod
Additional data	errorID
Additional data	etime
Additional data	filter
Additional data	mech
Additional data	oid
Additional data	op
Additional data	remlog
Additional data	scope
Agent (Connector) Severity	ERROR = High; WARNING = Medium; INFO, DEBUG = Low
Application Protocol	LDAP or HTTP (dependent upon event)
Bytes Out	Bytes transferred
Destination Address	dependent upon event
Destination Port	port to which event was sent
Destination User Name	dependent upon event
Device Action	Server action, dependent upon event
Device Custom Number 1	conn (Connection Number)
Device Custom Number 2	fd (File Descriptor)
Device Custom Number 3	Error Code
Device Custom String 1	DN

ArcSight ESM Field	Device-Specific Field
Device Custom String 2	Bind Method
Device Custom String 3	Request ID
Device Custom String 4	Tag
Device Custom String 5	Connection Code
Device Custom String 6	number of entries in directory
Device Event Category	recordType
Device Event Class ID	Status code
Device Product	'Sun ONE Directory Server'
Device Receipt Time	timestamp
Device Severity	'INFO'
Device Time Zone	zone indicated by the timestamp offset
Device Vendor	'Sun'
Message	LDAP error or status code
Name	dependent upon event
Request Method	HTTP request type
Request URL	URL
Source Address	Host IP address
Source Host Name	Host Name or IP address
Source Port	port from which event received

Sun ONE Directory Server Error Log Mappings

ArcSight ESM Field	Device-Specific Field
Additional data	access_allow
Additional data	account_dn
Additional data	aci_index
Additional data	aciIndex
Additional data	acl_elevel
Additional data	acl_index
Additional data	acl_version

SmartConnector for Sun ONE Directory Server File Device Event Mapping to ArcSight Fields

ArcSight ESM Field	Device-Specific Field
Additional data	allow_handles
Additional data	attrs
Additional data	backend
Additional data	base
Additional data	block_type
Additional data	calledAt
Additional data	code
Additional data	conns
Additional data	context
Additional data	container
Additional data	csn
Additional data	current_entry
Additional data	current_state
Additional data	deciding_aci
Additional data	deny_handles
Additional data	deref
Additional data	deviceCustomString1
Additional data	event-id
Additional data	filter
Additional data	index
Additional data	indexmask
Additional data	indextype
Additional data	ldap_attr
Additional data	line
Additional data	lpd
Additional data	matched_value
Additional data	maxconns
Additional data	module
Additional data	nattrs
Additional data	next_state
Additional data	nsslapd-dbcachesize-value

SmartConnector for Sun ONE Directory Server File

Device Event Mapping to ArcSight Fields

ArcSight ESM Field	Device-Specific Field
Additional data	nthandles
Additional data	number
Additional data	old_dn
Additional data	old_ldap_attr
Additional data	operation
Additional data	percentage
Additional data	ptald
Additional data	read
Additional data	resource_type
Additional data	response
Additional data	right
Additional data	rule_type
Additional data	search
Additional data	scheduled
Additional data	scope
Additional data	sizelimit
Additional data	slapd_poll
Additional data	string
Additional data	threadcount
Additional data	time
Additional data	timelimit
Additional data	uniqueid
Additional data	val
Agent (Connector) Severity	ERROR = High; WARNING = Medium; INFORMATION, INFO, DEBUG = Low
Destination Host Name	host to which event was sent
Destination Port	port to which event was sent
Destination Process Name	dependent upon event
Destination User Name	user to whom event was sent
Device Action	action taken by the device
Device Custom Number 1	conn (Connection Number)
Device Custom Number 2	FD (File Descriptor)

SmartConnector for Sun ONE Directory Server File Device Event Mapping to ArcSight Fields

ArcSight ESM Field	Device-Specific Field
Device Custom Number 3	errorcode (Error Code)
Device Custom String 1	DN
Device Custom String 2	Bind Method
Device Custom String 3	Request ID
Device Custom String 4	Tag
Device Custom String 5	Connection Code
Device Custom String 6	number of entries in the directory
Device Event Class ID	Status code
Device External ID	dependent upon event
Device Process Name	process
Device Product	'Sun ONE Directory Server'
Device Receipt Time	timestamp
Device Severity	'INFO'
Device Time Zone	zone indicated by the timestamp offset
Device Vendor	'Sun'
Device Version	dependent upon event
External ID	dependent upon event
File ID	file ID
File Name	file name
File Type	file type
Name	dependent upon event
Old File Name	previous file name
Source Host Name	Host Name or IP address
Source Port	port from which event received

please confirm that when customer used MySQL JDBC driver 5.1.38, they had issue to receive events. And the workaround is to apply older driver 5.0.8, after that connector is able to received events.

Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this computer, click the link above and an email window opens with the following information in the subject line:

Feedback on SmartConnector for Sun ONE Directory Server File (Micro Focus Security ArcSight Connectors 8.3.0)

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to Documentation-Feedback@microfocus.com.

We appreciate your feedback!
