# Product Overview

The SmartConnector for Microsoft Windows Event Log – Unified and the SmartConnector for Microsoft Windows Event Log – Native can connect to local or remote machines, inside a single domain or from multiple domains, to retrieve events from all types of event logs.

This connector supports event collection from these Microsoft Windows versions:

- Microsoft Windows Server 2012
- Microsoft Windows Server 2012 R2
- Microsoft Windows Server 2016
- Microsoft Windows Server 2019

Note that Security events are not audited by default. Be sure to specify the type of security events to be audited (see "Enable Microsoft Windows Event Log Audit Policies" in the configuration guide for the SmartConnector for Microsoft Windows Event Log -- Native).

There are three default Windows event logs:

- Application log (tracks events that occur in a registered application)
- Security log (tracks security changes and possible breaches in security)
- System log (tracks system events)

## Applications Supported

- Microsoft OAlerts
- DNS Client Operational

System	IPsec Driver	4960	IPsec dropped an inbound packet that failed an integrity check. Category	Subcategory	ID	Message Summary
System	IPsec Driver	4963	IPsec dropped an inbound clear text packet that should have been secured. This is usually due to the remote computer changing its IPsec policy without informing this computer. This could also be a spoofing attack attempt.
		4965	IPsec received a packet from a remote computer with an incorrect Security Parameter Index (SPI). This is usually caused by malfunctioning hardware that is corrupting packets. If these errors persist, verify that the packets sent from the remote computer are the same as those received by this computer. This error may also indicate interoperability problems with other IPsec implementations. In that case, if connectivity is not impeded, then these events can be ignored.
