About this PDF Version of Online Help

This document is a PDF version of the online help. This PDF file is provided so you can easily print multiple topics from the help information or read the online help in PDF format. Because this content was originally created to be viewed as online help in a web browser, some topics may not be formatted properly. Some interactive topics may not be present in this PDF version. Those topics can be successfully printed from within the online help.

Revision History

Date	Description
07/09/2021	Added support for CheckPoint R80.30.
06/18/2020	Added support for R80 FDE, R80 MEPP, and R80 Endpoint Security Console.
05/21/2020	Added support for R80 Application Control, R80 Email Security, R80 Identity Logging, R80 SmartDefense, R80 VPN-1 and FireWall-1, R80 Anti Malware, R80 New Anti Virus, R80 Identity Awareness, R80 URL Filtering, R80 DLP, R80 HTTPS Inspection, R80 Syslog and "Unknown Product" Product mappings.
04/30/2020	Updated R77 Common Security Event Mappings and R77 VPN-1 and FireWall-1 Event Mappings.
03/19/2020	Added new mappings for Checkpoint Audit Syslog R80 Database Tool and for Checkpoint Audit Syslog R80 Unknown.
08/24/2019	Added new mappings to R77 Anti-bot (Anti Malware) Event Mappings.
08/24/2019	Added new mappings to R80 VPN-1 and FireWall-1 Event Mappings table.
08/24/2019	Added support for CheckPoint R80.20 version.
08/24/2019	Added and updated R80 Anti-Malware Event Mappings.
08/24/2019	Updated R80 New Anti-Virus Event Mappings table.
08/24/2019	Updated R80 Application Control Event Mappings.
08/24/2019	Updated R80 Identity Awareness Event Mappings.
08/24/2019	Updated R80 URL Filtering Event Mappings.
08/24/2019	Updated R80 SmartDefense Event Mappings.
08/24/2019	Updated R80 FG Event Mappings.
08/24/2019	Updated R80 Common Audit Event Mappings.
08/24/2019	Added R80 HTTPS Inspection Event Mappings table.
08/24/2019	Added R80 SmartEvent Client Event Mappings table.
08/24/2019	Added R80 Syslog Event Mappings table.
08/24/2019	Added R80 System Monitor Event Mappings table.
08/24/2019	Added R80 Connectra Event Mappings table.
08/24/2019	Added R80 Application Control URL Filtering Event Mappings table.
08/24/2019	Added R80 Security Gateway/Management Event Mappings table.
08/24/2019	Added R80 VPN-1 and FireWall-1(+)FG Event Mappings table.
08/24/2019	Updated R80 VPN-1 and FireWall-1 Event Mappings table.
08/24/2019	Added R80 SmartView Monitor Event Mappings table.
08/24/2019	Added R80 SmartView Tracker Event Mappings table.

Date	Description
08/24/2019	Added R80 Logs Indexer Event Mappings table.
08/24/2019	Added R80 Query-database Event Mappings table.
08/24/2019	Added R80 Web-UI Event Mappings table.
08/24/2019	Added R80 SmartConsole Event Mappings table.
08/24/2019	Added R77 Application Control(+)URL Filtering Event Mappings table.
08/24/2019	Added R77 HTTPS Inspection Event Mappings Event Mappings table.
08/24/2019	Added R77 FG Event Mappings table.
08/24/2019	Added R80 FG(+)VPN-1 and FireWall-1 Event Mappings table.
07/24/2019	Updated R80 Common Audit Event Mappings and R80 CLI Event Mappings.
06/19/2019	Added support for R80 CLI module.
06/19/2019	Added R80 CLI Event Mappings table.
06/19/2019	Updated R80 Common Audit Event Mappings table.
12/17/2018	Updated Common Syslog Event Mappings.
11/19/2018	Added "Device Host Name" to R80 and R77 Common Syslog Event Mappings.
10/24/2018	Added support for R80 FG Event Mappings. Added "Device Host Name" for R80 and R77 Common Syslog Event Mappings. Updated mappings for R80 VPN-1 and FireWall-1, R80 Application Control, R80 Identity Awareness, R80 URL Filtering, R80 Log Update and R80 VPN-1.
08/20/2018	Added support for VPN-1 and Log Update Modules. Updated R80 VPN-1 and R80 Log Update Event Mappings. Updated R77 Threat Emulation Event Mappings.
07/18/2018	Added support for: Connectra, Anti Virus, Security Gateway/Management, Linux OS, Syslog, Threat Emulation, Anti Bot and Anti Virus. Added "Source Process Id", "Name", "Device Event Class Id" and "Device Action" to common mappings. Updated R77 VPN-1 and FireWall-1 Event Mappings.
05/16/2018	Updated in R77 VPN-1 and FireWall-1 Event Mappings.
10/20/2017	Added support for R80.10.
10/17/2017	Added encryption parameters to Global Parameters. Added time zone mapping to common event mappings.
09/15/2017	Added support for the following modules: ESOD, Eventia Analyzer Server, Identity Logging, and VPN-1 Edge.
08/15/2017	Added "Destination Port" to common mappings.
05/15/2017	Updated configuration information.
02/15/2017	Updated versions supported paragraph. Added remote system logging configuration information.

SmartConnector for Check Point Syslog

Revision History

Date	Description
12/15/2016	Added information clarifying supported events.
11/30/2016	Updated installation procedure for setting preferred IP address mode. Added troubleshooting information.
02/15/2016	First release of SmartConnector documentation.

SmartConnector for Check Point Syslog

This guide provides information for installing the SmartConnector for Check Point Syslog and for configuring the device for syslog event collection.

Product Overview

Check Point Endpoint Security protects PCs and eliminates the need to deploy and manage multiple agents by combining firewall, anti-virus, anti-spyware, full disk encryption, media encryption with port protection, network access control, program control, and VPN.

Supported versions for Check Point with Gaia Operating System are:

R77.30, R80.10, R80.20, and R80.30

The Check Point Syslog connector supports the same events as the Check Point OPSEC NG connector as well as Provider-1 (now known as Multi-Domain Management) events.

The following table indicates the supported modules:

R77.30 Modules (Limited Support) ¹	R80.10 Modules	R80.20 Modules	R80.30 Modules
Anti-bot (Anti-Malware)	Anti-Malware	Anti-Malware	AntiMalware
Anti-Spam	Anti-Spam	Antivirus	AntiSpam
Anti-Virus	New Anti-Virus	HTTPS Inspection	ApplicationControl
Application Control	Application Control	SmartEvent Client	ApplicationControl_URLFiltering
Audit	Audit	Syslog	CLI
DLP (Data Loss Prevention)	DLP (Data Loss Prevention)	System Monitor	Connectra
Email Security	Email Security	Connectra	DLP
ESOD	ESOD	Application Control URL Filtering	EndpointSecurityConsole
Eventia Analyzer Server	Identity Awareness	Security Gateway/Management	ESOD
Identity Awareness	Identity Logging	VPN-1 and FireWall-1 (+)FG	FG
Identity Logging	SmartDefense	SmartView Monitor	HTTPSInspection
SmartDefense	SmartDashboard	SmartView Tracker	IdentityAwareness
URL Filtering	SmartUpdate	Logs Indexer	IdentityLogging
VPN-1 and Firewall-1	URL Filtering	Query-database	MEPP

¹The vendor no longer supports version R77.30. Therefore, we offer limited support.

R77.30 Modules (Limited Support) ¹	R80.10 Modules	R80.20 Modules	R80.30 Modules
VPN-1 Edge	VPN-1 and Firewall-1	Web-UI	NewAntiVirus
Connectra	Log Update	SmartConsole	QueryDatabase
Anti Virus	VPN-1	FG(+)VPN-1 and FireWall-1	SecurityGatewayManagement
Security Gateway/Management	FG	MEPP	SmartConsole
Linux OS		DFE	SmartDashboard
Syslog			SmartDefense
Threat Emulation			SmartEventClient
Anti Bot and Anti Virus			SmartViewMonitor
			Syslog
			SystemMonitor
			URLFiltering
			VPN1FireWall1
			WebUI

¹The vendor no longer supports version R77.30. Therefore, we offer limited support.

Configuration

Check Point's Long Term Evolution (LTE) feature adds support for sending Check Point Logs to a Syslog Server. LTE is supported on Gaia Security Gateways of R77.30 and higher, and requires the R77.30 Add-On (see sk105412 <http://supportcontent.checkpoint.com/solutions?id=sk105412>) on the Security Management Server or Multi-Domain Server.

Information in the following section of this guide has been derived from the *Check Point Firewall R77 Versions Administration Guide*. See that document for complete configuration information.

Enabling System Logging on Gaia Portal

1. In the Gaia portal, go to **System Management > System Logging**.
2. In the **System Logging** section, select the following options:
 - Send audit logs to management server upon successful configuration
 - Send audit logs to syslog upon successful configuration
3. Save your changes before exiting the portal.

Sending Check Point Logs to a Syslog Server

You can configure gateways to send logs directly to syslog servers by first defining syslog servers, then updating the logging properties of the gateways. Note that IPv6 and software blade logs are not supported.

Defining a Syslog Server

To define a syslog server:

1. In SmartDashboard, click the **Firewall** tab.
2. In the **Servers and OPSEC Applications** object tree, right-click **Servers > New > Syslog**.
3. In the **Syslog Properties** window, enter or select values for the following:
 - Name
 - Optional comment

- Host
- Port (Default = 514)
- Version (BSD Protocol or Syslog Protocol)

Configuring a Gateway to Send Logs to Syslog Servers

You can configure a gateway to send logs to multiple syslog servers. Make sure the syslog servers are the same type: BSD Protocol or Syslog Protocol.

To send the logs from a gateway to syslog servers:

1. In SmartDashboard, go to **Gateway Properties > Logs**.
2. In the **Send logs and alerts to these log servers** table, click the green button to add syslog servers.
3. Click **OK**.
4. Install policy.

Configuring Remote System Logging

Configure the settings for the system logs, including sending them to a remote server. Make sure to configure the remote server to receive the system logs.

Configuring Remote System Logging – WebUI

This section includes procedures for configuring system logging to remote servers using the WebUI.

To send system logs using the WebUI:

1. In the tree view, click **System Management > System Logging**.
2. Click **Add**. The **Add Remote Server Logging Entry** window opens.
3. In **IP Address**, enter the IP address of the remote server.
4. In **Priority**, select the severity level of the logs that are sent to the remote server.
5. Click **OK**.

Configuring Remote System Logging - CLI (syslog)

- To send system logs to a remote server:
`add syslog log-remote-address <remote ip> level <severity>`
- To stop sending system logs to a remote server:
`delete syslog log-remote-address <remote ip> level <severity>`
- To configure the file name of the system log:
`set syslog filename <file>`
- To show the system logging settings:
`show syslog all`
`filename`
`log-remote-addresses`

Parameter	Description
syslog	Configures the system logging.
log-remote-access	Configures remote IP address for system logging.
level	Filters a severity level for the system logging.
filename	Configures or shows the file name of the system log.

Parameter Value	Description
<remote ip>	IP address of remote computer.
<severity>	Syslog event severity level: emerg, alert, crit, err, warning, notice, info, debug, or all.
<file>	System log file name.

Example:

```
add syslog log-remote-address 111.0.2.1 level all
set syslog filename system_logs
show syslog filename
```

Configuring the Syslog SmartConnectors

The three ArcSight Syslog SmartConnectors are:

- Syslog Daemon
- Syslog Pipe
- Syslog File

The Syslog Daemon SmartConnector

The Syslog Daemon SmartConnector is a syslogd-compatible daemon designed to work in operating systems that have no syslog daemon in their default configuration, such as Microsoft Windows. The SmartConnector for Syslog Daemon implements a UDP receiver on port 514 (configurable) by default that can be used to receive syslog events. Use of the TCP protocol or a different port can be configured manually.

If you are using SmartConnector for Syslog Daemon, add the following statement in the `rsyslog.conf` file to forward Oracle Audit events so that Syslog Daemon will start receiving events: `*.* @@(remote/local-host-IP):514`

Sample example: `local1.warning @@10.0.0.1:514`

Note:

You can either use `*.*` to read all Syslog events or you can filter specific events by replacing regex with the specific event name. For example: `*.* @@(remote/local-host-IP):514` and `local1.warning @@10.0.0.1:514`

Use `@@` to send events over a TCP connection and use `@` to send events over an UDP connection.

If you are running SmartConnector for Syslog Daemon on the same machine as the Oracle server, you must provide the IP address of the local host. If you want to forward events to other machines, you must provide the IP address of the same.

Note: Messages longer than 1024 bytes may be split into multiple messages on syslog daemon; no such restriction exists on syslog file or pipe.

The Syslog Pipe and File SmartConnectors

When a syslog daemon is already in place and configured to receive syslog messages, an extra line in the syslog configuration file (`rsyslog.conf`) can be added to write the events to either a **file** or a system **pipe** and the ArcSight SmartConnector can be configured to read the events from it. **In this scenario, the ArcSight SmartConnector runs on the same machine as the syslog daemon. Therefore, you must do additional configurations for the ArcSight syslog file or syslog pipe SmartConnectors in the system where all Syslog Daemon SmartConnector configurations are done.**

The **Syslog Pipe** SmartConnector is designed to work with an existing syslog daemon. This SmartConnector is especially useful when storage is a factor. In this case, syslogd is configured to write to a named pipe, and the Syslog Pipe SmartConnector reads from it to receive events.

The **Syslog File** SmartConnector is similar to the Pipe SmartConnector; however, this SmartConnector monitors events written to a syslog file (such as `messages.log`) rather than to a system pipe.

Configure the Syslog Pipe or File SmartConnector

This section provides information about how to set up your existing syslog infrastructure to send events to the ArcSight Syslog Pipe or File SmartConnector.

The standard UNIX implementation of a syslog daemon reads the configuration parameters from the **/etc/rsyslog.conf** file, which contains specific details about which events to write to files, write to pipes, or send to another host. First, create a pipe or a file; then modify the **/etc/rsyslog.conf** file to send events to it.

For syslog pipe:

1. Create a pipe by executing the following command:

```
mkfifo /var/tmp/syspipe
```

2. Add the following line to your **/etc/rsyslog.conf** file:

```
*.debug /var/tmp/syspipe
```

or

```
*.debug |/var/tmp/syspipe
```

depending on your operating system.

3. After you have modified the file, restart the syslog daemon either by executing the scripts **/etc/init.d/syslogd stop** and **/etc/init.d/syslogd start**, or by sending a `configuration restart` signal.

On RedHat Linux, you would execute:

```
service syslog restart
```

On Solaris, you would execute:

```
kill -HUP `cat /var/run/syslog.pid`
```

This command forces the syslog daemon to reload the configuration and start writing to the pipe you just created.

For syslog file:

Create a file or use the default for the file into which log messages are to be written.

After editing the `/etc/rsyslog.conf` file, be sure to restart the syslog daemon as described above.

When you follow the SmartConnector Installation Wizard, you will be prompted for the absolute path to the syslog file or pipe you created.

Installing the SmartConnector

The following sections provide instructions for installing and configuring the Check Point Syslog SmartConnector.

Installing Syslog

Install this SmartConnector (on the syslog server or servers identified in the *Configuration* section) using the SmartConnector Installation Wizard appropriate for your operating system. The wizard will guide you through the installation process. When prompted, select one of the following **Syslog** connectors (see *Configure the Syslog SmartConnectors* in this guide for more information):

- Syslog Daemon
- Syslog Pipe
- Syslog File

Because all Syslog SmartConnectors are sub-connectors of the main syslog SmartConnector, the name of the specific Syslog SmartConnector you are installing is not required during installation.

The Syslog Daemon connector listens on port 514 (configurable) for UDP syslog events by default. You can configure the port number or use the TCP protocol manually. The Syslog Pipe and Syslog File connectors read events from a system pipe and file, respectively. You can select the appropriate connector as per the Syslog infrastructure setup.

Preparing to Install Connector

Before you install any SmartConnectors, make sure that the Micro Focus ArcSight products with which the connectors will communicate have already been installed correctly (such as ArcSight ESM or ArcSight Logger).

For complete product information, refer to the *Administrator's Guide to ArcSight Platform* guide, available on [ArcSight Documentation](#).

If you are adding a connector to the ArcSight Management Center, see the *ArcSight Management Center Administrator's Guide* for instructions, and start the installation procedure from [step 3](#).

Before installing the SmartConnector, ensure that you have the following:

- Local access to the machine where the SmartConnector is to be installed
- Administrator passwords

Installing and Configuring the SmartConnector by Using the Wizard

The installation steps described in this section are specific to the Check Point Syslog Connector. For detailed installation steps or for manual installation steps, see [SmartConnector Installation and User Guide](#).

To install and configure the Check Point Syslog Connector:

1. Start the installation wizard.
2. Follow the instructions in the wizard to install the core software.

Note: When installing a syslog daemon SmartConnector in a UNIX environment, run the executable as root user.

3. Specify the relevant [Global Parameters](#), when prompted.
4. From the **Type** drop-down list, select **Syslog Daemon**, **Syslog Pipe**, or **Syslog File** as the type of connector, then click **Next**.
5. Enter the required SmartConnector parameters to configure the SmartConnector, then click **Next**.

Connector	Parameter	Description
Syslog Daemon Parameters	Network port	The SmartConnector for Syslog Daemon listens for syslog events from this port.
	IP Address	The SmartConnector for Syslog Daemon listens for syslog events only from this IP address (accept the default (ALL) to bind to all available IP addresses).
	Protocol	The SmartConnector for Syslog Daemon uses the selected protocol (UDP or Raw TCP) to receive incoming messages.
	Forwarder	Change this parameter to 'true' only if the events being processed are coming from another SmartConnector sending to a CEF Syslog destination, and that destination also has CEF forwarder mode enabled. That allows attributes of the original connector to be retained in the original agent fields.
Syslog Pipe Parameter	Pipe Absolute Path Name	Absolute path to the pipe, or accept the default: /var/tmp/syspipe

Connector	Parameter	Description
Syslog File Parameters	File Absolute Path Name	<p>Enter the full path name for the file from which this connector will read events or accept the default: \var\adm\messages (Solaris) or \var\log\messages (Linux).</p> <p>A wildcard pattern can be used in the file name; however, in realtime mode, rotation can occur only if the file is over-written or removed from the folder. Realtime processing mode assumes following external rotation.</p> <ul style="list-style-type: none"> For date format log rotation, the device writes to 'filename.timestamp.log' on a daily basis. At a specified time, the device creates a new daily log and begins to write to it. The connector detects the new log and terminates the reader thread to the previous log after processing is complete. The connector then creates a new reader thread to the new 'filename.timestamp.log' and begins processing that file. To enable this log rotation, use a date format in the file name as shown in the following example: filename 'yyyy-MM-dd'.log; For index log rotation, the device writes to indexed files - 'filename.log.001', 'filename.log.002', 'filename.log.003', and so on. At startup, the connector processes the log with highest index. When the device creates a log with a greater index, the connector terminates the reader thread to the previous log after processing completes, creates a thread to the new log, and begins processing that log. To enable this log rotation, use an index format, as shown in the following example: filename '%d,1,99,true'.log; Specifying true indicates that it is allowed for the index to be skipped; for example, if 5 appears before 4, processing proceeds with 5 and will not read 4, even if 4 appears later. Use of true is optional.
	Reading Events Real Time or Batch	Specify whether file is to be read in batch or realtime mode. For batch mode, all files are read from the beginning. The 'Action Upon Reaching EOF' and 'File Extension if Rename Action' parameters apply for batch mode only.
	Action Upon Reaching EOF	For batch mode, specify 'None', 'Rename', or 'Delete' as the action to be performed to the file when the connector has finished reading and reaches end of file (EOF). For realtime mode, leave the default value of 'None' for this parameter.
	File Extension If Rename Action	For batch mode, specify the extension to be added to the file name if the action upon EOF is 'Rename' or accept the default value of '.processed'.

6. Select a [destination and configure parameters](#).

7. Specify a name for the connector.
8. Select whether you want to [run the connector as a service or in the standalone mode](#).
9. Complete the installation.
10. [Run the SmartConnector](#).

For instructions about upgrading the connector or modifying parameters, see [SmartConnector Installation and User Guide](#).

Device Event Mapping to ArcSight Fields

Check Point may obfuscate some confidential fields, showing some like '***Confidential***'. To see these fields without obfuscation, contact Check Point Support for the CLogToSyslog hot fix and apply the hotfix to the management server. There is also a Multi-Domain Management CLogToSyslog hotfix available from Check Point.

sourceProcessId	is_first_for_luuid

R77 Common Audit Event Mappings

ArcSight ESM Field	Device-Specific Field
Category Outcome	Audit Status (Success, Failure)
Destination Host Name	Machine
Destination User Name	Administrator
Device Action	Action
Device Custom String 2	Subject
Device Custom String 3	ObjectTable
Device Custom String 4	Operation Number
Device Custom String 5	ObjectName
Device Custom String 6	PolicyName
Device Event Category	'AuditLog'
Device Event Class ID	One of (Operation, 'AuditLog')
Device Facility	product_family
External ID	Uid
Message	One of (all of ('TCP packet out of state:',TCP packet out of state,',';',' tcp_flags:',tcp_flags,",";"), FieldsChanges, Additional Info)
Name	One of (Operation, 'AuditLog')
Source Address	client_ip

R77 Common Security Event Mappings

ArcSight ESM Field	Device-Specific Field
Destination Address	dst
Destination Port	One of (d_port, service)
Destination Service Name	oneOf(service_id,service,svc)
Device Action	oneOf(Action,action)
Device Custom String 1	'null'
Device Event Category	'SecurityLog'
Device Event Class ID	oneOf(product,blade_name,ProductName)

ArcSight ESM Field	Device-Specific Field
Device Facility	product_family
Name	oneOf(product,blade_name,ProductName)
Source Address	src
Source Port	s_port
Transport Protocol	One of (proto, Proto)

R77 Anti-bot (Anti Malware) Event Mappings

ArcSight ESM Field	Device-Specific Field
Bytes In	received_bytes
Bytes Out	sent_bytes
Destination Host Name	dst_machine_name
Destination User Name	dst_user_name
Device Custom Floating Point 1	unique_detected_hour
Device Custom Floating Point 2	unique_detected_day
Device Custom Floating Point 3	unique_detected_week
Device Custom Floating Point 4	unique_detected_mail
Device Custom Number 1	scan_hosts_hour
Device Custom Number 2	scan_hosts_day
Device Custom Number 3	scan_hosts_week
Device Custom String 1	malware_rule_name
Device Custom String 2	protection_id
Device Custom String 3	Protection Type
Device Custom String 4	Protection name
Device Custom String 5	Source OS
Device Custom String 6	scan direction
Device Severity	severity
Message	reason
Reason	reason
Request Client Application	web_client_type

ArcSight ESM Field	Device-Specific Field
Request URL	resource
Source Host Name	src_machine_name
Source User Name	One of (src_user_name, user)

R77 Anti-Spam Event Mappings

ArcSight ESM Field	Device-Specific Field
Destination Host Name	dst_machine_name
Destination User Name	dst_user_name
Device Custom Number 1	Recipients Number
Device Custom String 1	email_id
Device Custom String 2	email_message_id
Device Custom String 3	email_spool_id
Device Custom String 4	email_control
Device Custom String 5	email_session_id
Device Event Category	email_spam_category
Message	One of (reason, email_control_analysis)
Source Host Name	src_machine_name
Source User Name	src_user_name

R77 Anti-Virus Event Mappings

ArcSight ESM Field	Device-Specific Field
Bytes In	received_bytes
Bytes Out	sent_bytes
Destination DNS Domain	Destination DNS Hostname
Device Custom String 1	malware_rule_name
Device Custom String 2	protection_id
Device Custom String 3	Protection Type
Device Custom String 4	Protection name
Device Custom String 5	Source OS

ArcSight ESM Field	Device-Specific Field
Device Severity	severity
File Name	file name
File Type	file_type
Message	One of (description, information)
Request Client Application	web_client_type
Request URL	resource
Source Host Name	src_machine_name
Source User Name	One of (src_user_name, user)

R77 Application Control Event Mappings

ArcSight ESM Field	Device-Specific Field
Bytes In	received_bytes
Bytes Out	sent_bytes
Destination Host Name	dst_machine_name
Destination User ID	UserCheck_incident_uid
Destination User Name	One of (dst_user_name, UserCheck)
Device Custom String 1	app_rule_name
Device Custom String 3	app_rule_id
Device Custom String 4	user_status
Device Custom String 5	UserCheck_Confirmation_Level
Device Custom String 6	frequency
Device Event Category	app_category
Device Outbound Interface	UserCheck_Interaction_name
Event Outcome	Update Status
File ID	snid
File Size	bytes
Message	portal_message
Reason	reason
Request Client Application	web_client_type

ArcSight ESM Field	Device-Specific Field
Request URL	resource
Source Host Name	src_machine_name
Source User Name	One of (src_user_name, user)

R77 DLP Event Mappings

ArcSight ESM Field	Device-Specific Field
Application Protocol	dlp_transport
Destination User ID	UserCheck_incident_uid
Destination User Name	One of (dlp_recipients, UserCheck)
Device Custom String 1	dlp_rule_name
Device Custom String 2	rule
Device Custom String 3	incident_extension
Device Custom String 4	user_status
Device Custom String 5	UserCheck_Confirmation_Level
Device Custom String 6	scan direction
Device Event Category	dlp_categories
Device Outbound Interface	UserCheck_Interaction_name
Device Severity	severity
External ID	dlp_rule_uid
File Name	dlp_file_name
File Size	message_size
Message	One of (information, portal_message, dlp_violation_description, dlp_action_reason)
Source NT Domain	from

R77 Email Security (imap, pop-3, smtp, ldap) Event Mappings

ArcSight ESM Field	Device-Specific Field
Destination Host Name	dst_machine_name
Destination Translated Address	xlatedst
Destination User Name	dst_user_name
Device Custom Number 1	email_recipients_num
Device Custom String 1	email_id
Device Custom String 2	email_message_id
Device Custom String 3	email_spool_id
Device Custom String 4	email_control
Device Custom String 5	email_session_id
Message	email_control_analysis
Source Host Name	src_machine_name
Source User Name	src_user_name

R77 ESOD Event Mappings

ArcSight ESM Field	Device-Specific Field
Device Action	activity
Device Custom Date 1	subs_exp (Subs Exp)
Device Custom String 3	sig_ver (Sig Version)
Device Custom String 4	update_src (Update Src)
Device Event Class Id	One of(All of(One of(product,blade_name),'','Event'), All of(activity,'','Update Status))
Event Outcome	Update Status
Name	One of(All of(One of(product,blade_name),'','Event'), All of(activity,'','Update Status))
Reason	reason

R77 Eventia Analyzer Server Event Mappings

ArcSight ESM Field	Device-Specific Field
Destination Host Name	Machine
Destination User Name	Administrator
Device Custom Number 1	Operation Number
Device Custom String 1	session_id (Session ID)
Device Custom String 2	Subject
Device Custom String 3	Additional Info
Name	Operation
Source Address	client_ip

R77 Identity Awareness Event Mappings

ArcSight ESM Field	Device-Specific Field
Device Custom String 1	connectivity_state
Device Custom String 2	identity_src
Device Custom String 3	identity_type
Device Custom String 4	termination_reason
Device Custom String 5	auth_method
Device Custom String 6	src_user_group
Device Event Category	ctrl_category
Device Version	client_version
File ID	snid
File Path	src_machine_group
Message	description
Request Client Application	client_name
Request Context	origin_sic_name
Source Host Name	src_machine_name

ArcSight ESM Field	Device-Specific Field
Source NT Domain	domain_name
Source User Name	One of (src_user_name, user)
Source User Privileges	roles

R77 Identity Logging Event Mappings

ArcSight ESM Field	Device-Specific Field
Device Custom Floating Point 1	information (Minutes)
Device Custom String 1	One of (src_user_name, user)(Email Information)
Message	information
Source Address	Src
Source Host Name	src_machine_name
Source User Name	One of (src_user_name, user)

R77 SmartDefense Event Mappings

ArcSight ESM Field	Device-Specific Field
Destination Host Name	dst_machine_name
Destination User Name	dst_user_name
Device Custom Number 1	during_sec
Device Custom Number 2	fragments_dropped
Device Custom Number 3	Update Version
Device Custom String 1	voip_log_type

Source Host Name	src_machine_name
Source Translated Address	proxy_src_ip
Source User Name	All of ('src_user_name: ',src_user_name,' ','user: ',user)

R77 Application Control(+)URL Filtering Event Mappings

ArcSight ESM Field	Device-Specific Field
Device Action	Update Status
Device Severity	Severity
Message	description

R77 HTTPS Inspection Event Mappings

ArcSight ESM Field	Device-Specific Field
Device Custom String 2	All of (app_category,app_properties)
Device Custom String 3	All of (https_inspection_action,HTTPS_inspection_rule_id,https_validation,HTTPS_inspection_rule_name)
File ID	snid
Message	description
Reason	reason
Requested URL	resource
Source Host Name	src_machine_name
Source User Name	One of (src_user_name,user)

R77 FG Event Mappings

ArcSight ESM Field	Device-Specific Field
File ID	snid
Source Host Name	src_machine_name
Source User Name	One of (user,src_user_name)

Unknown Product Mappings

ArcSight ESM Field	Device-Specific Field
Destination Host Name	cu_detected_by
Device Custom Date 1	cu_detection_time
Device Custom Floating Point2	flags
Device Custom Floating Point3	sequencenum
Device Custom Number 1	cu_log_count
Device Custom Number 2	time_interval
Device Custom Number 3	version
Device Custom String 5	ifname

SmartConnector for Check Point Syslog
Device Event Mapping to ArcSight Fields

ArcSight ESM Field	Device-Specific Field
Device Direction	ifdir
Device Event Class Id	one Of(concatenate (alert,description),"Unknown Event")
Device Host Name	origin
Device Product	"Unknown Product"
Device Severity	severity
Device Version	version
End Time	event_end_time
File Id	logid
Message	description
Name	one Of(concatenate (alert,description),"Unknown Event")
Old File Id	loguid
Reason	reason
Start Time	event_start_time

Troubleshooting

Why do some fields show '***Confidential***'?

Check Point may obfuscate some confidential fields, showing some like '***Confidential***'. To see these fields without obfuscation, contact Check Point Support for the CLogToSyslog hot fix and apply the hotfix to the management server. There is also a Multi-Domain Management CLogToSyslog hotfix available from Check Point.

please confirm that when customer used MySQL JDBC driver 5.1.38, they had issue to receive events. And the workaround is to apply older driver 5.0.8, after that connector is able to received events.

Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this computer, click the link above and an email window opens with the following information in the subject line:

Feedback on SmartConnector for Check Point Syslog (Micro Focus Security ArcSight Connectors 8.2.1)

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to Documentation-Feedback@microfocus.com.

We appreciate your feedback!
