Release Notes for the ArcSight Recon Compliance Pack for PCI

This document contains information about the 25.3 version of the Compliance Pack for PCI .

For specific product issues, contact [Open Text Customer Care](#).

What's New

The 25.3 release of the ArcSight Recon Compliance Pack for PCI includes the following new features and enhancements:

- **Support for PCI DSS v4.0.1**

Requirement mappings have been updated based on PCI DSS 4.0.1 and its 12 requirements.

- **Compliance Overview**

A new unified dashboard shows compliance status across all 12 PCI DSS requirements, with drill-down capabilities into specific requirements for in-depth investigation of non-compliance events and related alerts.

- **Overview folder:** This folder contains the Compliance Overview dashboard, a single page with individual widgets to show the compliance status of all 12 PCI DSS requirements. Each widget has a drill-down capability to facilitate in-depth investigation of non-compliance reason, trends, and related alerts.
- **Supporting Dashboards folder:** This folder contains the Compliance Overview for Selected Control dashboard, which can be used to view alerts, trends, and other details for any particular requirement.

- **Enhanced Dashboards**

Enhanced dashboards deliver advanced interactivity, dynamic inline filters, and newly added widgets—such as Parabox visualizations—along with special views tailored to specific PCI DSS requirements. Built-in drill-down capabilities and seamless integration with the search component empower faster investigations and deeper analysis.

- **UI Alignment**

The user interface (UI) has been updated to match the Recon 24.2 stylesheet, ensuring consistency with the latest platform design standards.

- **Improved Detection Capabilities**

Improved detection capabilities leverage new product features, such as a distance algorithm on the Phishing Attacks dashboard that enhances the ability to detect phishing attempts based on domain similarity and graph-based charts like Parabox and Radar Charts that analysts can use to spot malicious activity and compare multiple variables across categories within the PCI environment. These enhancements strengthen overall threat identification and response.
