

	cause of a crash.
-fprofiling	Adds counters to total statistics for reports on where your application is spending the most time.
-fsource-location	Generates source location code, enabling information to be dumped on source location when runtime aborts. Enabled by -g.
-fstack-check	Enables stack checking debug function.
-ftrace -fsimpletrace -ftraceall	The tracing compiler flags. Cause output to be written to an output file during the runtime execution.
-ftrap-unhandled-exception	Provides additional information when runtime aborts.
-g	Causes debugger metadata to be stored in the compiled object file or, if -DebugDB compiler flag is used, in an SQLite3 database.
-G	Produces debugging information, for purposes of debugging programs written in "C".
COB_ERROR_FILE	Used when debugging are set to capture information for debugging purposes.
COB_FILE_TRACE	Causes data to be written to the COB_ERROR_FILE whenever there is a file I/O operation executed.
COB_DUMP	No longer required after your functionality tests have been completed. Creates an output file for the memory dump created when a runtime aborts.
