Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit <https://www.microfocus.com/documentation/connected-mx/>.

Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- View software vulnerability alerts
- Enter into discussions with other software customers
- Manage software licenses and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

Release Notes

Connected MX Web Application 4.11.0

This document is an overview of the changes made to Micro Focus CMX Web Application 4.11.0. It contains important information about the following items, which other documentation does not include:

- [Enhancements](#)
- [Resolved issues](#)
- [Limitations](#)
- [Open issues](#)
- [Installation](#)

For information about the installation requirements and compatibility of this release with other products, see the associated *Micro Focus Connected MX Web Application 4.11.0 Support Matrix*. The support matrix may be updated between releases, so it is available only from the [Connected MX documentation site](#).

Enhancements

This section describes the enhancements in this release. For more information about a specific one, see the CMX Help Center or contact Micro Focus Support.

Assisted restore roles. Two new roles, **Support Restore** and **Group Support Restore**, are available for assisted restores. The special roles are responsible for managing restores under their realm or the group. (TT-34121)

The new roles can manage their own restores and other user's restores. However, they cannot manage other users or access other user's data.

Filter report by user ID and/or group ID. When running reports, you can now filter the reports by user ID and/or group ID and the user or group names are not exposed. (TT-32883)

Enable policy inheritance per group. When creating or editing a group, you can now specify whether it inherits policies. (TT-32936)

By default, a top-level group inherits corporate policies, and a subgroup inherits policies from its parent. A group that does not inherit policies uses this default policy behavior unless you explicitly assign policies to it.

Enhanced retention policy. web application retention policies now support the configuration of user and device grace periods and device deletion notification. (TT-32573)

Retention policies include the following new settings so that you can override the default behavior on a per-group basis:

- **User deletion grace period.** Number of days to retains deleted users, including their devices and data, before permanently deleting them.
Maximum: 180 days
Default: 35 days.
- **Device deletion grace period.** Number of days to retain deleted devices and their data before permanently deleting them.
Maximum: 180 days or the value of **User deletion grace period**, whichever is smaller.
Default: 35 days.
- **Device deletion notification.** Whether web application sends an email to users when you delete their device.
Default: No notification sent.

Revising a user or device grace period does not affect items currently pending delete.

Delay Agent scan through policy. The Agent configuration policy now lets you delay the Agent's startup scan for up to 60 minutes. (TT-32884)

For users whose Agent starts when they log on, a delayed scan can improve system performance because it begins after other applications have completed their initial processing. Users can override your setting through their Agent's preference settings unless you lock it.

NOTE: This setting affects only Agent version 4.11 or later. Prior Agent versions continue to scan immediately after they start.

Resolved issues

This release resolves the following issue. For more information, contact, Micro Focus Support.

Issue: Resolved the issue where, post migration, devices that are deleted were still marked as active. (TT-29418)

Limitations

This section describes the limitations in this release. For more information about a specific one, contact Micro Focus Support.

Issue: You cannot view H.264-encoded MPEG-4 files using a Chrome browser. (TT-16665)

Chrome browsers do not support these types of files.

Workaround: Use a browser that supports H.264-encoded MPEG-4 files to view the file.

Issue: When viewing the web application in portrait mode using a Safari browser on an iPad running iOS 9 or later, the font in some dialog boxes appears too large. (TT-18185)

Workaround: To reset the font to its correct size, rotate the iPad to landscape mode and use it in that orientation.

Issue: Windows 10: While managing backups, the web application displays an error if you select the drive that serves as the System Reserved Partition. (TT-19125)

Although CMX does not support the backup of items on the System Reserved Partition, it displays the drive for selection. If you select this drive, the web application displays a message that it cannot connect to the Agent.

Issue: You cannot create a user who has the same email address as a user whose status is pending delete. (TT-20565)

Workaround: To reuse the email address of a user who is pending delete, reactivate the deleted user, change their email address, and then delete the user again. Now that the email address is no longer associated with a CMX user, you can assign it to someone else.

Issue: The CMX internal IdP fails to authenticate users if the customer is assigned to a partner five levels deep in the CMX hierarchy. (TT-21521)

Although CMX supports partners up to five levels deep, its internal IdP supports authentication for only four levels.

Workaround: To ensure that CMX can authenticate users when using its internal IdP, create partners for those customers at a maximum of four levels deep from the top of the CMX hierarchy.

NOTE: The web application shows partners only a partial view of the hierarchy, which starts at their location and continues down with all subpartners under their span of administrative control. Therefore, the actual number of levels a partner can create depends on their own location within the hierarchy. For help resolving problems related to this issue, contact Support.

Issue: Due to an issue with Microsoft Edge build 38.14393 and later, when you open a drop-down list and then scroll the page with the scrollbar, the list of items remains in its original position until you refresh the page. (TT-28469 / EdgeHTML issue #14978262)

Workaround: To ensure that the Edge browser moves the contents of an open drop-down list correctly, scroll the page with the mouse wheel instead of the scroll bar. Alternatively, use a different browser to view the application.

Issue: Due to an issue with FireFox version 65.0 and later, the web application displays an empty text box followed by the text "lebowskilebowski" in the upper left corner under the header. (TT-28616)

Workaround: To prevent these items from appearing, use a different browser to access the web application.

Open issues

This section describes the open issues in this release. For more information about a specific one, contact Micro Focus Support.

Issue: You cannot share files with a recipient whose email address contains more than 50 characters. (TT-10670)

If you try to share files with a recipient whose email address contains more than 50 characters, the web application fails to share the files with any specified recipient and displays the error message: Invalid argument provided. Please verify that provided argument is valid.

Workaround: Find out if the person has an alternative email address that contains less than 50 characters. If so, use that address to share the file.

Issue: Occasionally, closing the file view by pressing Esc prevents you from immediately viewing the same file again. (TT-10687)

If you press Esc to close the file view and then immediately try to view the file again, the web application does not always redisplay the file.

Workaround: To resolve the problem, either view another file before trying to view the first file again or refresh the page through the browser.

Issue: The web application displays charts and graphs in Microsoft PowerPoint files upside down. (TT-16472)

Issue: You cannot view large videos stored in CMX. (TT-16903)

If you attempt to view a video file larger than approximately 100 MB, the web application displays an error message.

Workaround: To view a large video stored in CMX, download the file, and then play the video locally.

Issue: When using Internet Explorer 11 on touch-screen devices, you cannot resize custom images for collaboration files. (TT-17986)

The zoom function in the Custom Image Selection wizard does not work on touch-screen devices when using Internet Explorer 11.

Workaround: Do one of the following:

- Choose a custom image of 32 x 32 pixels, which you do not have to resize.
 - Use a different type of browser so that you can resize the image.
-

Issue: The Policy Audit report sometimes identifies a policy as being applied to the Whole Company when it actually applies only to one or more specific groups. (TT-20519)

Issue: Web Application displays "Internal Server Error" instead of a more descriptive message if it

authenticates users against your own corporate identity provider (IdP) that is configured to prevent external access to the web application. (TT-20725)

Issue: The Data Trends report does not include data from collaborations. (TT-21132)

If you select multiple types of data for the report, including collaborations, the results do not contain collaboration data. If you select only collaborations, the results state "No data available".

Issue: Under certain scenarios that are still to be determined, CMX generates a duplicate device for the same hardware. (TT-32379)

When this occurs, the user cannot migrate the duplicated device. If you encounter this issue, contact Support for help to manually remediate it.

Installation

To access the CMX web application, use the URL to the server that hosts your CMX environment:

- <https://cmx-us.connected.com>
- <https://cmx-uk.connected.com>
- <https://cmx-eu.connected.com>

If you aren't sure which URL to use, contact your partner or the software fulfillment group that created your corporate CMX account.

To install the CMX Key Management Server (KMS) software required in environments using customer-managed keys, see the *CMX Key Management Server Install Guide*, available from the [Connected MX documentation site](#).
