Documentation Updates

The title page of this document contains the following identifying information:

- Software Version number
- Document Release Date, which changes each time the document is updated
- Software Release Date, which indicates the release date of this version of the software

This document was produced for OpenText™ Fortify on Demand CE 24.3 on July 30, 2024. To check for recent updates or to verify that you are using the most recent edition of a document, go to:

Chapter 10: Policies and Support	379
Maintenance Schedule and Software Updates	379
Data Retention Policy	380
Getting Support	381
Accessing Support Resources	381
Submitting a Help Center Ticket	382
Tracking your Help Center Tickets	383
Send Documentation Feedback	384

Preface

Contacting OpenText Fortify on Demand Customer Support

Contact OpenText Fortify on Demand Customer Support through the following ways:

- Start a live chat or create a support ticket in the Fortify on Demand Help Center, accessible from the Fortify on Demand portal.
- Call 1.800.893.8141 or 650.800.3233.

For More Information

For more information about Fortify software products:

<https://www.microfocus.com/cyberres/application-security>

About the Documentation Set

The Fortify Software documentation set contains installation, user, and deployment guides for all Fortify Software products and components. In addition, you will find technical notes and release notes that describe new features, known issues, and last-minute updates. You can access the latest versions of these documents from the following Product Documentation website:

<https://www.microfocus.com/support/documentation>

To be notified of documentation updates between releases, subscribe to Fortify Product Announcements on the OpenText Fortify Community:

<https://community.microfocus.com/cyberres/fortify/w/announcements>

Fortify Product Feature Videos

You can find videos that highlight Fortify products and features on the Fortify Unplugged YouTube channel:

<https://www.youtube.com/c/FortifyUnplugged>

What's New

This section describes new features, improvements, and other updates in each release.

v24.3

Announcements

Continuous Application Monitoring Deprecation

The Continuous Application Monitoring service is scheduled to be deprecated in the 25.2 release.

Engine and Rulepack Updates

Fortify Software Security Content 2024 Update 1 Support (June 2024)

Fortify on Demand has implemented Fortify Software Security Content 2024 update 1 from Fortify Security Research (SSR). For more information, see <https://community.microfocus.com/cyberres/fortify/w/announcements/47361/opentext-fortify-software-security-content-2024-update-1>.

Fortify Static Code Analyzer 24.2.0 (June 2024)

Fortify on Demand has implemented Fortify Static Code Analyzer 24.2.0 for scanning source code. Fortify Static Code Analyzer 24.2.0 offers the following features:

Platforms

- macOS 14 support

Languages

- Angular 16.1 and 16.2
- Apex 59 and 60
- C23
- Dart 3.1
- Django 5.0
- Flutter 3.13
- Go 1.21 and 1.22
- Java 21
- Kotlin 1.9
- PHP 8.3

- Scala 3, versions 3.3-3.4
- Swift 5.10
- TypeScript 5.1 and 5.2
- Visual Basic (VB.NET) 16.9

Compilers

- gcc 13
- g++ 13
- Swiftc 5.9.2, 5.10

Build tools

- Bazel 6.4.0
- CMake 3.23.3 and later
- MSBuild 17.9
- xcodebuild 15.3

Features/Updates

- ARM JSON Templates (IaC)
- AWS CloudFormation (IaC)
- Updated LOC (lines of code) calculation: The LOC calculation returns the total number of new lines, including blank lines and comments. The LOC value is closely aligned with what users might see in the code editor. Because of changes to how LOC is calculated, these values should not be compared to values achieved with previous releases of Fortify Static Code Analyzer.

Fortify WebInspect 24.2.0 Support (June 2024)

Fortify on Demand has implemented Fortify WebInspect 24.2.0 for scanning web applications.

New Features

Magellan Dashboards Phase 1

The portal has implemented new dashboards leveraging the OpenText Magellan platform. The new dashboards will offer a comprehensive application security program overview, insight into important vulnerability metrics, and consistent dashboard views among the Fortify product suite. Magellan dashboards are available alongside legacy dashboards.

The following default dashboard types are available:

- Executive Overview
- Program Overview

A Magellan dashboard consists of:

- Singular data points of key metrics.
- Individual charts that visualize a specific facet of tenant data. Tiles are customizable at a granular level.

Filters, if applicable, can be applied to data represented in the charts. Users can download the data in the chart, either as the chart itself or as raw data, in several formats.

For a list of limitations in the current implementation, see the user documentation.

Enhanced Remediation with Fortify Aviator

The Fortify Aviator service leverages Generative Artificial Intelligence (GAI) with the Claude 3 Sonnet Large Language Model (LLM) to audit results and provide enhanced remediation guidance. Remediation guidance consists of comments added to scan results and includes code snippets. This service consumes 1 additional assessment unit.

Fortify Aviator is applied to scan results after the initial Fortify Audit Assistant audit. Fortify Aviator content is added to the scan results and imported to Fortify on Demand. The content is available in the portal and API.

Availability

- Fortify Aviator is available in the AMS and APAC data centers.
- Fortify Aviator is available for static assessments with Automated audit.

Coverage

- For details on supported technology stacks, supported categories, and file types, see the Fortify Aviator article in the Zendesk Help Center.
- In the case of exceptionally large scan results and/or scan results with an exceptionally large number of issues in one category, Fortify Aviator might be restricted to a subset of the issues.

Updated Static Scan Settings

The following updates have been made to the Static Scan Setup page to simplify and streamline configuration of the static scan settings and clarify scanning instructions.

- The fields have been organized into a required section and optional sections with optional fields.
- Non-required fields are grouped into sections (collapsed by default) below the required fields.
- Technology stack and language level are no longer required fields.

Tool Download Updates

The following tool downloads were updated:

- Fortify Static Code Analyzer 24.2.0 (June 2024)
- Fortify ScanCentral SAST client 24.2.0 (June 2024)

API Updates

The following updates have been made to the Fortify on Demand API:

- The API endpoint GET /api/v3/applications/{applicationId}/Issue-count-by-severity has been added for returning the number of issues by severity for an application.
- The API endpoints GET /api/v3/users/{userId} and GET /api/v3/users now return the last login date and modified date.
- The following API endpoints have been updated for enabling Fortify Aviator in static scans:
 - GET /api/v3/releases/{releaseId}/static-scans/scan-setup
 - PUT /api/v3/releases/{releaseId}/static-scans/scan-setup
 - GET /api/v3/scans/{scanId}/summary

Improvements

Software Composition Analysis Option Added To Security Policy

Software Composition Analysis been added to the assessment type options when configuring a security policy. Upon the upgrade, existing policies will continue to allow Software Composition Analysis assessments until the policy is updated.

Debricked Integration Update

For open source issues identified through Debricked's fingerprint analysis, the **Dependencies** tab on the issue details panel of the Issues page now shows the component's file name and its relative path in the payload.

Data Export Update

The **Fix Validated** column (date and time an issue was marked as fix validated) has been added to the issues data export. The information is available for issues moving forward.

Site Accessibility Check Update

The site accessibility check for dynamic assessments has been updated. Site accessibility check results now provide additional error details for failed checks.

Issues That Have Attachments Marked on the Issues Page

Issues that have attachments are now marked with a paper clip icon in the navigation panel of the Issues page to help users quickly locate them.

Search Picklist Attribute Values

When specifying a picklist attribute value, users can now search the list if there are more than 10 values.

Chapter 1: Introduction

This guide provides instructions on using Fortify on Demand to run application security testing in the cloud. This guide is intended for application security professionals and development teams.

This section contains the following topics:

- [Fortify on Demand Overview](#) 17
- [Security Rating System](#) 18
- [Service Level Objectives](#) 20

Fortify on Demand Overview

Fortify on Demand is a Software as a Service (SaaS) solution that enables your organization to easily and quickly build and expand a Software Security Assurance program. Fortify on Demand's software security testing incorporates advanced and updated application testing technologies with expert review, dedicated account management, and 24/7 support.

An application submitted to Fortify on Demand undergoes a security assessment where it is analyzed for various software security vulnerabilities. Fortify on Demand offers static, dynamic, and mobile assessments at several service levels. For applications already in production, the Continuous Application Monitoring service combines continuous dynamic vulnerability scanning and risk profiling to provide visibility into the risk facing your organization's external-facing application portfolio.

Security Assessments

A static assessment analyzes an application's source code, bytecode, and/or binary code. A dynamic assessment analyzes a running web application. A mobile assessment analyzes the mobile application's binary (analysis of network and backend web server is also available).

The Fortify on Demand testing team conducts a thorough analysis of your application for security vulnerabilities, including:

- Application scanning: the application is scanned using Fortify software.
- Expert review: an automated or manual audit (depending on the assessment type) of the scan results is included to ensure the highest possible degree of accuracy.
- Remediation validation: an assessment includes at least one free remediation scan to validate that the issues found have been fixed. The remediation scan is run on the same application after changes have been made to remedy the vulnerabilities found in the baseline assessment.

Fortify on Demand uses a 5-star rating system to rate applications that have been assessed. The assessment results are delivered in several ways, including various views in the UI, customizable reports, and detailed data exports.

Entitlements

Fortify on Demand security testing services are available through the purchase of entitlements in the form of assessment units or scans. Entitlements are valid for 12 months from the effective date of the order term.

Assessment units can be redeemed for single assessments or subscriptions of any assessment type; scan entitlements represent quantities of single assessments or subscriptions of a specific assessment type. Subscriptions allow unlimited assessments of selected applications during the subscription period.

Refer to your contract for specific entitlement details.

Support

Fortify on Demand offers support through self-service resources and the Fortify on Demand Help Center, staffed 24/7 by a dedicated support team of Technical Account Managers (TAMs).

Security Rating System

Fortify on Demand provides useful information about the vulnerability of your applications. To ensure that the results you receive are consistent, understandable, and actionable, Fortify on Demand uses the following reporting conventions to rate your applications:

Likelihood and Impact	18
Priority Order	19
Five-Star Assessment Rating	20

Likelihood and Impact

The likelihood and impact ratings define the level of risk for each discovered vulnerability.

Likelihood

Likelihood is the probability that a vulnerability will be accurately identified and successfully exploited.

Impact

Impact is the potential damage an attacker could do to assets by successfully exploiting a vulnerability. This damage could be in the form of, but not limited to, financial loss, compliance violation, loss of brand reputation, and negative publicity.

Priority Order

Fortify on Demand defines the following six priority levels as a way to categorize the severity of vulnerabilities (also known as “issues”).

Critical

Critical issues have high potential impact and high likelihood of occurring. Critical issues are easy to detect and exploit and result in large asset damage. These issues represent the highest security risk to an application. As such, immediately remediate critical issues.

SQL injection is an example of a critical issue.

High

High-priority issues have high potential impact, but low likelihood of occurring. High-priority issues are often difficult to detect and exploit, but they can result in large asset damage. These issues represent a high security risk to an application. Remediate high-priority issues in the next scheduled patch release.

Hard-coded password is an example of a high issue.

Medium

Medium-priority issues have a low potential impact, but high likelihood of occurring. Medium-priority issues are easy to detect and exploit, but they typically result in little asset damage. These issues represent a moderate security risk to your application. Remediate medium-priority issues in the next scheduled product update.

Path manipulation is an example of a medium issue.

Low

Low-priority issues have low potential impact and low likelihood of occurring. Low-priority issues can be difficult to detect and exploit and typically result in little asset damage. These issues represent a minor security risk to your application. Remediate low-priority issues as time allows.

Dead code is an example of a low issue.

Best Practices

"Best practices" indicates no significant vulnerabilities in your application, just minor issues that may be less than ideal for your type of application.

Info

“Info” is the lowest priority level. Fortify on Demand provides information about your application that does not represent a vulnerability but may be of general interest.

Five-Star Assessment Rating

The Fortify on Demand 5-star rating system provides an overview on the likelihood and impact of vulnerabilities present within an application. A perfect rating within this system would be 5-stars, indicating that no vulnerabilities were uncovered.

★☆☆☆☆ Fortify on Demand awards one star to applications that have undergone a security review that identifies critical (high likelihood and high impact) issues. Vulnerabilities that are trivial to exploit and have a high business or technical impact should never exist in business-critical software.

★★☆☆☆ Fortify on Demand awards two stars to applications that have undergone a security review that identifies no critical (high likelihood and high impact) issues. Vulnerabilities that have a high impact, even if they are non-trivial to exploit, should never exist in business critical software.

★★★☆☆ Fortify on Demand awards three stars to applications that have undergone a security review that identifies no high (low likelihood and high impact) issues and meets the requirements needed to receive two stars. Vulnerabilities that have a low impact, but are easy to exploit, should be considered carefully as they may pose a greater threat if an attacker exploits many of them as part of a concerted effort or leverages a low impact vulnerability as a stepping stone to mount a high-impact attack.

★★★★☆ Fortify on Demand awards four stars to applications that have undergone a security review that identifies no medium (high likelihood and low impact) issues and meets the requirements for three stars.

★★★★★ Fortify on Demand awards five stars, the highest rating, to applications that have undergone a security review that identifies no issues.

Service Level Objectives

All assessments have a target turnaround time, represented by the service level objective (SLO) of the chosen assessment type. The SLO is specified in business days, based on the Fortify on Demand data center's time zone. The SLO is four hours to two business days for a static assessment, two to three business days for a dynamic assessment, and one to four business days for a mobile assessment.

Note: The portal displays the SLO of the selected assessment type when you are setting up an assessment. For more information, see "[Configuring a Static Scan](#)" on page 108, "[Configuring a Dynamic Scan](#)" on page 129, and "[Configuring a Mobile Scan](#)" on page 157.

If an assessment does not meet customary testing requirements, the testing team may pause the SLO timer while waiting for a response from the customer. The testing team is committed to promptly restarting the timer and testing as soon as possible.

If you have additional questions about SLOs and balancing your business timeline with an assessment service level, contact support.

Note: Service Level Agreements (SLAs) are specific contractual agreements with customers. The turnaround times may differ from defined SLOs. Service Level Agreements are defined in your customer statement of work (SOW) and include targets and liabilities if they are not met.

Service Level Objective Start and End Dates

The SLO start and end dates are defined as follows:

- **Start Date:** The date the application assessment was requested to be started
- **End Date:** The date the results are available

Service Level Objective Exceptions

A static assessment SLO does not apply to any of the following exceptions:

- Application has not been packaged correctly as per Fortify on Demand best practice guidelines
- The application payload exceeds 1,000MB

A dynamic or mobile assessment SLO does not apply to any of the following exceptions:

- Fortify on Demand is not provided continuous 24-hour per day access and fully operational test credentials to assess the application that is in scope.
- Fortify on Demand is not able to configure security testing tools to use a minimum of fifteen (15) concurrent connections continuously to assess a single application with an average response time of less than 600ms to an HTTP/HTTPS request
- Mobile binary is obfuscated or is not prepared as per Fortify on Demand best practice guidelines.

Chapter 2: Getting Started

This section contains the following topics:

- [Before You Start](#) 22
- [Logging In and Out of the Portal](#) 22
- [Resetting Your Password](#) 24
- [Navigating the Portal](#) 24
- [Searching the Portal](#) 26
- [Managing Your Account Settings](#) 26
- [Managing Notifications](#) 30

Before You Start

Before you access Fortify on Demand, verify that you have the following:

- An active internet connection
- Portal credentials

Note: You will receive instructions for setting up your credentials in a welcome email. If you have not received the email, check your spam filter.

- Monitor with a minimum display resolution of 1280 x 720 (recommended 1920 x 1080)
- One of the following supported browsers installed:
 - Chrome latest version
 - Firefox Quantum latest version
 - Safari on Mac latest version (Safari on PC is not supported)
 - Edge latest version

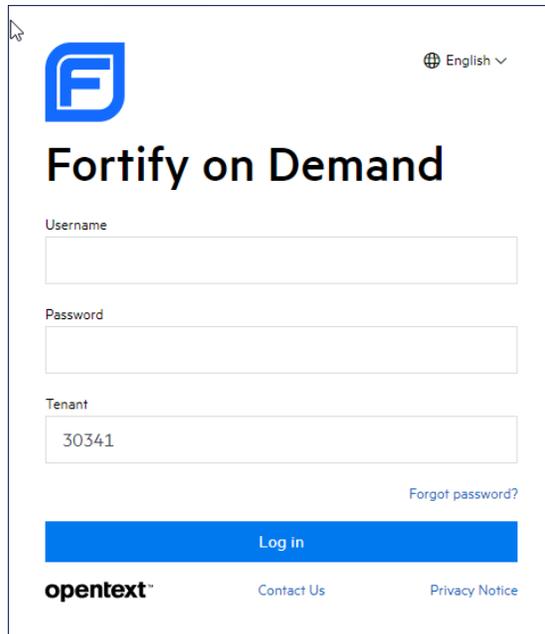

Logging In and Out of the Portal

You can access the portal once you have received your portal credentials.

Logging in to the Portal

To log in to the portal:

1. Type the portal URL that was provided with your user credentials in your browser's address bar.
The login page appears.
2. Type your username, password, and tenant code.

Note: If you have logged in through SSO within the last 30 days, the SSO Login link is available to log back in.

3. Click **Login**.
The landing page appears. If you have not set a challenge question and corresponding answer, you are redirected to your account settings page instead.

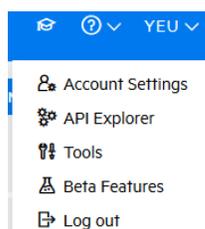

Note: If your organization has two factor authentication enabled, you are prompted to type a security code that you receive through SMS or email.

Logging out of the Portal

Log out of the portal from the portal toolbar settings. Note that the portal automatically logs you out after a 20 minute period of inactivity.

To log out of the portal:

1. Click your account name and select **Log Out**.

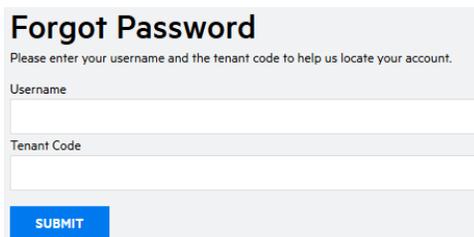

Resetting Your Password

To reset a forgotten password:

1. Click **Forgot Your Password?** on the login page.

The Forgot Password page appears.

2. Type your username and tenant code.

3. Click **Submit**.

An email containing the password reset link is sent to the email address associated with the user account.

4. Click the link in the email.

The Reset Password page appears.

Note: If the password reset link has expired, follow the instructions in the email to request a new link.

5. In the **Password Challenge Answer** field, type the answer to the challenge question. If you do not have a password challenge question and answer, this step does not apply to you.

6. Type and retype the password.

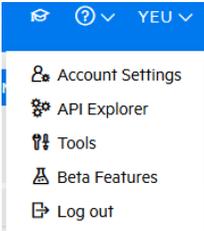

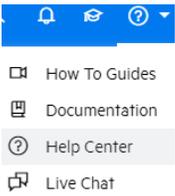

7. Click **Ok**.

The password is reset.

Navigating the Portal

The portal pages share a common page layout. The following table describes general navigation in the portal.

Task	Action
Navigate to a parent view	Select one of the following views: 

Task	Action
<p>Access account settings and additional resources</p>	<p>Click your account name on the toolbar.</p>

Searching the Portal

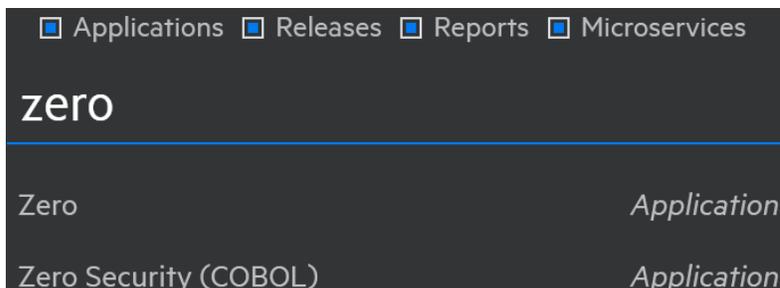

Fortify on Demand provides several ways of locating a resource in the portal. You can use the **Search** box located in the portal toolbar to search for an application, release, microservice, or report at the tenant level.

To search for an application, release, microservice, or report in the portal:

1. Click the  icon on the portal toolbar.
The search box appears. All item types are included in the search by default.

2. Clear one or more of the **Applications**, **Releases**, **Reports**, and **Microservices** check boxes to limit search results to the desired selection.
3. In the search box, type the full or partial name of the item that you want to search for.
Search results appear in a drop-down list.

4. Make your selection from the list. The portal refreshes with your selection.

Managing Your Account Settings

You can view and edit your account settings from the portal toolbar.

This section covers the following topics:

[Editing Your Account Settings](#)27

[Changing Your Account Password](#) 28

[Opting In To and Out Of Beta Features](#) 29

Editing Your Account Settings

You can update your personal contact information, portal preferences, and password reset question and answer on the My Account page.

To edit your account settings:

1. Click your account name and select **Account Settings**.

The My Account page appears.

2. Update the fields as needed. Fields that are outlined in red must be completed.

Field	Description
First Name	Your first name
Last Name	Your last name
Phone Number	Your phone number
Date Format	Date format displayed: MM/DD/YYYY, DD/MM/YYYY, YYYY/MM/DD
Time Format	Time format displayed: 12 Hour AM/PM, 24 Hour

Field	Description
Language	Language displayed: English, Español, 日本語 Note: Your reports are generated in your selected language.
Password Challenge Question	A list of password challenge questions
Password Challenge Answer	Your case-insensitive answer to the selected password challenge question Note: You will not be able to save your account changes unless you have set a password challenge question and answer.

3. Update your subscriptions in the **Email Subscriptions** section. Email subscriptions keep you up-to-date with Fortify on Demand events. You can sign up to receive notifications about releases and maintenance, security advisories, and relevant webinars and conferences.
4. Click **Save**.
A confirmation message appears indicating that you have successfully saved your changes.

Changing Your Account Password

You can change your account password on the My Account page.

Note: Passwords must be at least 16 characters long, not contain easy common password phrases, and have at least: 1 capital letter, 1 lower case letter, 1 number, and 1 special character.

To change your account password:

1. Click your account name and select **Account Settings**.
The My Account page appears.

The screenshot shows the 'My Account' page with a 'Security Warning' at the top: 'Please help improve the security of your account by providing a password reset challenge question and answer.' Below this, there are several sections: 'First Name' (You), 'Last Name' (Horang), 'Phone Number' (empty), 'Username' (horangy), 'Tenant' (30004), 'Email Subscriptions' (with checkboxes for Release and Maintenance Notifications, Events, and Security Advisories and Research), 'Date Format' (YYYY/MM/DD), 'Time Format' (12 Hour AM/PM), 'Language' (English), 'Password Challenge Question' (What is your favorite pet's name?), and 'Password Challenge Answer' (empty). At the top right, there are 'CHANGE PASSWORD' and 'SAVE' buttons.

2. Click **Change Password**.

The Change Password page appears.

The 'Change Password' form has a green header with the text 'Type in your existing password'. Below this are three input fields: 'Old Password', 'New Password', and 'Confirm New Password'. At the bottom, there are two buttons: 'OK' and 'BACK TO ACCOUNT'.

3. Type your current password in the **Old Password** field.
4. Type a new password in the **New Password** field.
5. Retype the new password in the **Confirm New Password** field.
6. Click **OK** button to change your password, or click **Back to Account** to exit the page.

Opting In To and Out Of Beta Features

Fortify on Demand might release beta features to collect feedback on their implementation. You can opt in to and opt out of beta features for your account.

To manage beta features:

1. Click your account name and select **Beta Features**.

The Beta Features page appears.

2. If beta features are available, move the slider from **No** to **Yes** to enable a beta feature and vice versa to disable it.

Click **Submit Feedback** to provide feedback. Your comments are appreciated.

Managing Notifications

Fortify on Demand provides a robust in-product notifications engine to enable users to better monitor key activity in the portal, which is particularly important for large applications and user bases. Users are initially assigned system default global subscriptions for notable events (including when an application's Business Criticality is changed, when a failing release is promoted to production, and when scans of an application are started, paused, completed, or canceled). Users can conveniently access notifications for applications to which they have access from the portal toolbar.

Users can create individual subscriptions to receive additional notifications. Security Leads can create tenant level global subscriptions for all users, specific roles, or specific groups. The following notification trigger types are available:

- Application Monitoring updates: changes between the enabled and disabled states, new vulnerabilities, risk profile updates
- Application creation, updates, and deletion
- Release creation, updates—including promotion of failing releases to production, and deletion
- Scan status updates
- Issue updates
- Report generation

This section contains the following topics:

Viewing Notifications	30
Creating an Individual Subscription	31
Creating a Global Subscription	33
Editing a Subscription	35
Deleting a Subscription	36

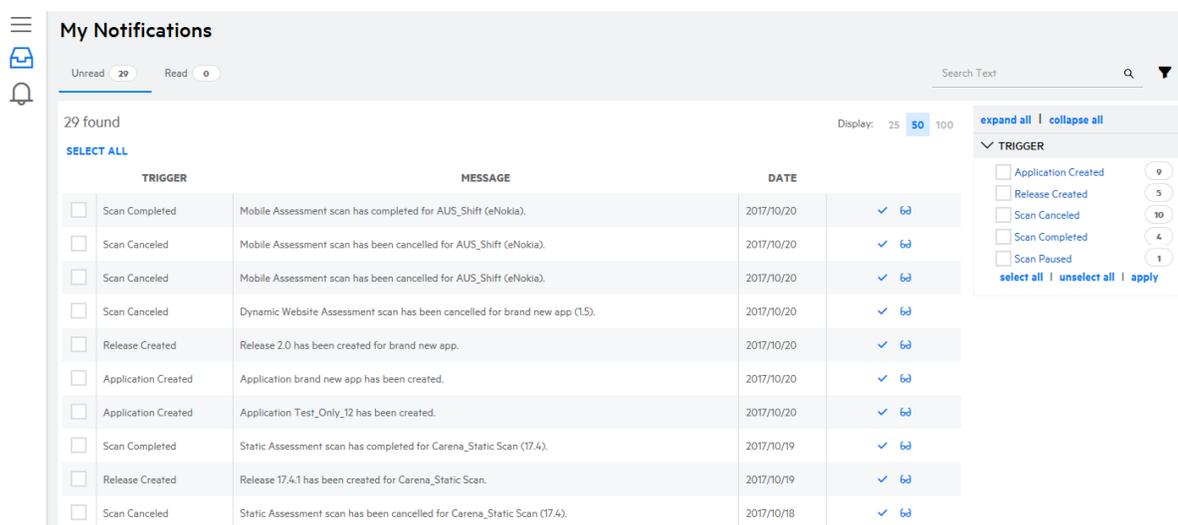

Viewing Notifications

You can view notifications from any page in the portal. When a trigger event occurs for which you are subscribed, a number next to the Notifications icon on the toolbar is incremented. This number is a tally of your notifications that have not been marked as read.

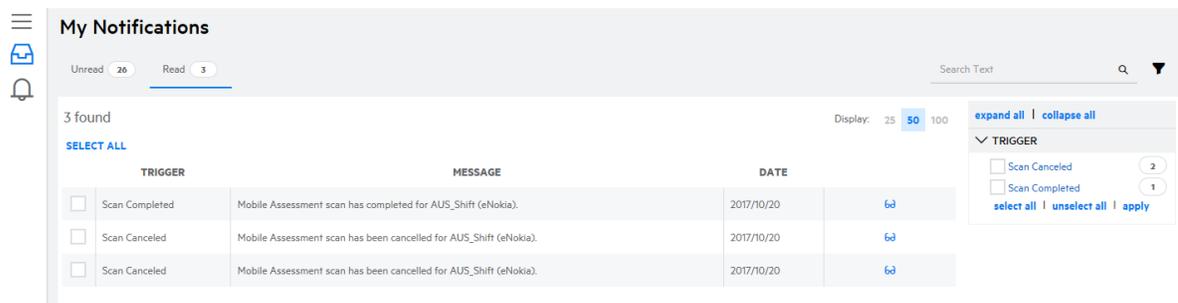

Note: All notifications, read or unread, are deleted after three months.

To view notifications:

1. Click the  icon on the portal toolbar.
The Notifications page appears, displaying a list of your unread notifications.

2. To view a notification in greater detail, click the  icon in the notification's action column. You are taken to the relevant application, release, or individual issue's page.
3. To mark a notification as read, click the  icon in the notification's action column. You can also filter the notification list and click **Mark as Read** to batch edit notifications.
The notifications are moved to Read Notifications and removed from the tally.
4. To view notifications that you have previously marked as read, select the **Read** tab.
The list of your read notifications appears.

Creating an Individual Subscription

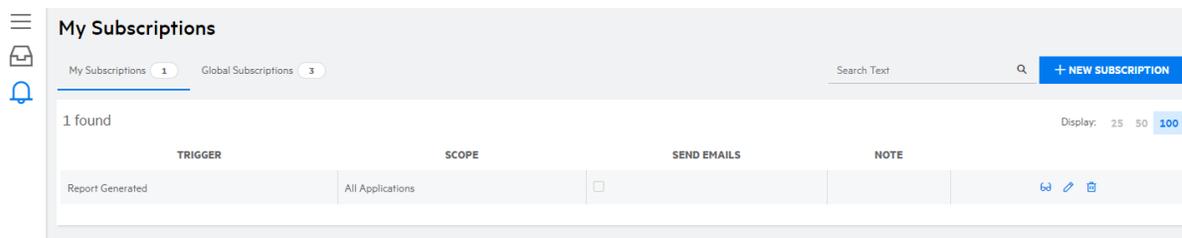

In addition to receiving global notifications, you can create your own subscriptions to receive notifications triggered by your specified criteria.

To create an individual subscription:

1. Click the  icon on the portal toolbar.
The Notifications page appears.

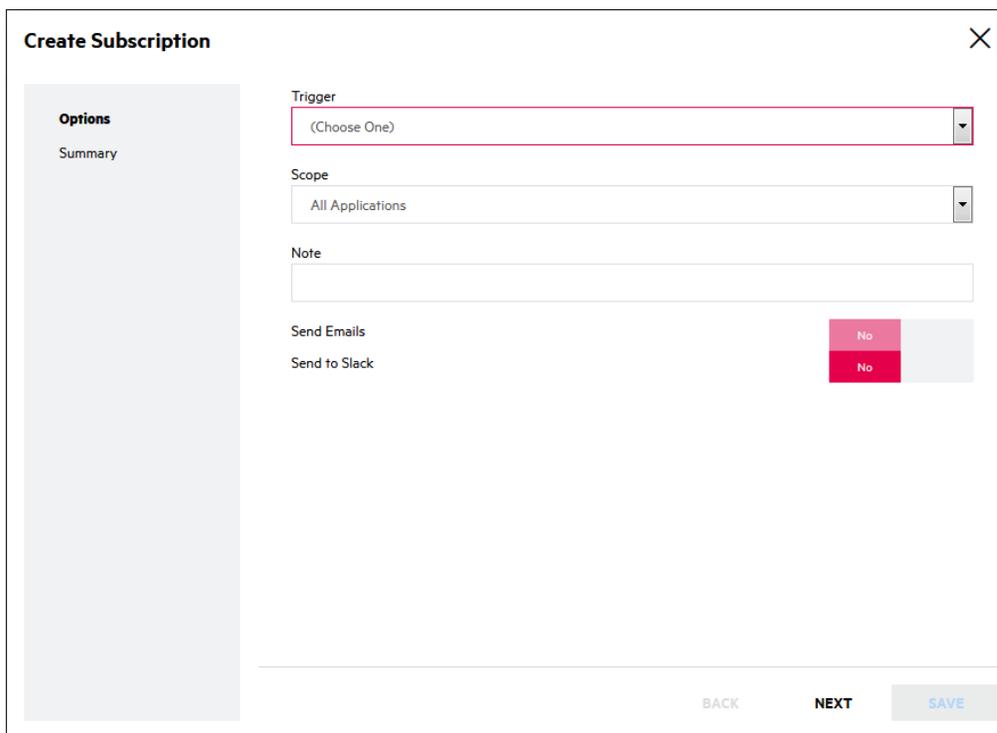

2. Click **Subscriptions**.

A list of your individual subscriptions appears.

3. Click **+New Subscriptions**.

The Create Subscription modal window opens.

4. Complete the fields. Fields are required unless otherwise noted.

Field	Description
Trigger	Select the trigger type from the list
Scope	Select the scope to which the trigger will apply from the list: All Applications (default), Application , Application Type , Application Attribute , and Business Criticality .
Note	(Optional) Type a note for the subscription.

Send Emails	(Optional) Move the slider from No to Yes to enable sending email notifications. This option is only available for non-issue related notifications.
Send to Slack	(Optional) Move the slider from No to Yes to post notifications to Slack. This option is only available if Slack integration has been configured and is limited to Security Leads.

5. Click **Next**.

If you selected a scope other than **All Applications**, the Scope page appears. Otherwise, skip to step 7.

6. Select the scope value and click **Next**.
7. Review the notification trigger settings and click **Save**.

The new subscription appears in your list of individual subscriptions.

Creating a Global Subscription

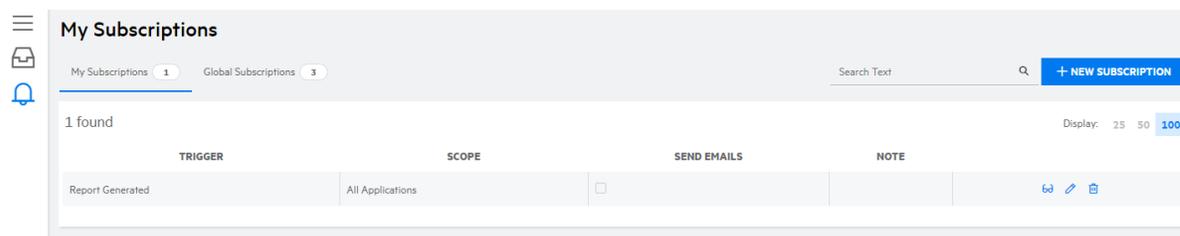

Security Leads can create tenant level global subscriptions for all users, specific roles, or specific groups.

To create a global subscription:

1. Click the  icon on the portal toolbar. The Notifications page appears.

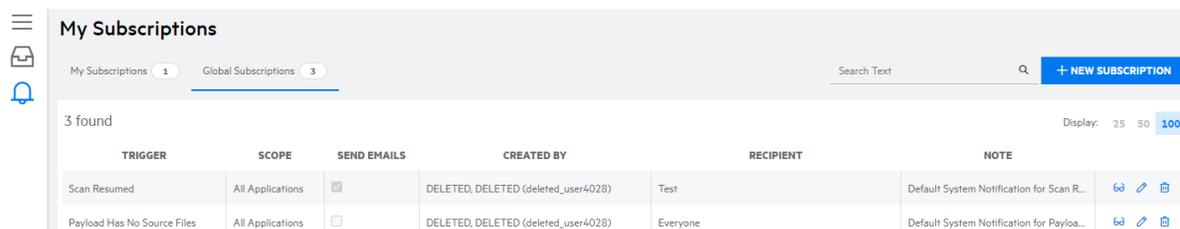

2. Click **Subscriptions**.

A list of your individual subscriptions appears.

3. Select the **Global Subscriptions** tab.

A list of global subscriptions, including system-default global subscriptions, appears.

4. Click **+New Subscription**.

The Create Subscription modal window opens.

5. Complete the fields. Fields are required unless otherwise noted.

Field	Description
Trigger	Select the trigger type from the list
Recipient	Select the subscription audience from the list: Everyone (default), Group , and Role . If you select Group or Role , select a specific group or role, respectively. Note: Recipients are limited to users who have access to the application referenced in a notification.
Scope	Select the scope to which the trigger will apply from the list: All Applications (default), Application , Application Type , Application Attribute , and Business Criticality .
Note	(Optional) Type a note for the subscription.
Send Emails	(Optional) Move the slider from No to Yes to enable sending email notifications. Scan Canceled and Scan Paused triggers have Send Emails permanently enabled. This option is available for non-issue related notifications.
Send to	(Optional) Move the slider from No to Yes to post notifications to Slack. This

Slack	option is available if Slack integration has been configured and is limited to Security Leads.
--------------	--

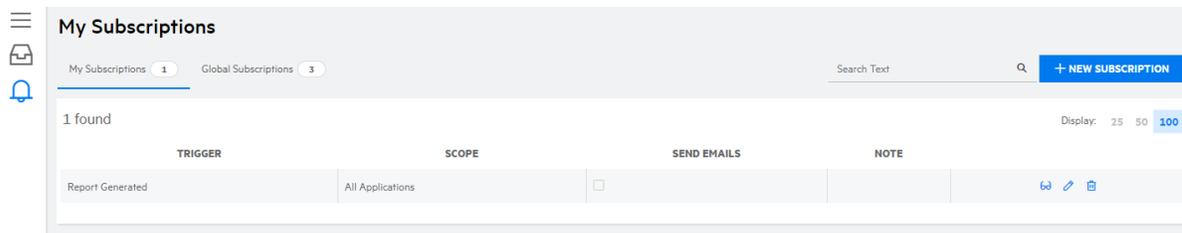

6. Click **Next**.
If you selected a scope other than **All Applications**, the Scope page appears. Otherwise, skip to step 8.
7. Select the scope value and click **Next**.
8. Review the notification trigger settings and click **Save**.
The new subscription appears in the list of global subscriptions.

Editing a Subscription

You can edit custom subscriptions. If you are a Security Lead, you can also edit global subscriptions.

To edit subscriptions:

1. Click the  icon on the portal toolbar.
The Notifications page appears.
2. Click **Subscriptions**.
A list of your custom subscriptions appears.

3. If you are editing a custom subscription, remain on the **My Subscriptions** tab. If you are a Security Lead who is editing a global subscription, select the **Global Subscriptions** tab.
4. Click the  icon next to the subscription you want to edit.
The Edit Subscription window appears.

3. If you are deleting an individual subscription, stay on the **My Subscriptions** tab. If you are deleting a global subscription, select the **Global Subscriptions** tab.

4. Click the  icon next to the subscription you want to delete.
A confirmation message appears.
5. Click **Yes** to confirm the deletion.
The subscription is removed from the list of subscriptions.

Chapter 3: Managing Applications and Releases

Security assessment results are organized according to applications and associated releases in Fortify on Demand. Users can manage applications and releases in the portal.

This section contains the following topics:

- [Structuring Applications and Releases](#)38
- [Managing an Application](#) 41
- [Managing a Release](#) 57
- [Viewing Applications in the Tenant](#)69
- [Viewing Releases in the Tenant](#) 75
- [Searching Applications and Releases](#)79
- [Creating Deep Links](#)80

Structuring Applications and Releases

Fortify on Demand defines an application and release for the purpose of security assessments.

Application Definition

An application is a codebase. It serves as a top-level container for one or more releases.

Fortify on Demand defines an application in the following contexts:

For static assessments, an application is defined as a deployable unit of code consisting of a collection of source and/or byte code instruction files that:

- Can deliver some or all of the functionality of a business application
- Is written in the same technology family
- Is built on a single platform
- Does not include any loosely coupled components
- Can be configured to run on an application server (e.g., a Web Application Archive [WAR] or Enterprise Archive [EAR] file for a Java application or a solution in team foundation server for a .NET application)

A microservice as a small, modular service that runs as an independent, loosely coupled process and communicates through a well-defined, lightweight mechanism to serve a single function of a business application. For an application using a microservices architecture, a Static Subscription entitles a

customer to test up to 10 microservices that form some or all of the application. Each microservice must be packaged and submitted as a single ZIP file of 100 MB or less. For all other static assessment services, each microservice is considered a separate application.

The following conditions apply to microservice applications:

- Supported technology stacks are: .NET, .NET Core, C/C++, Go, JAVA/J2EE, JS/TS/HTML, PHP, Python, Scala, and Ruby.
- Static scans submitted for multiple microservices are placed in a queue and will be scanned in the order in which they were queued.
- Third party libraries are always excluded when scanning microservices.

For dynamic assessments, an application is defined as a fully qualified domain name (FQDN). For example, for www.microfocus.com:

- www.microfocus.com is the FQDN and is the application.
- www.microfocus.com/news/ is the same hostname and hence the same FQDN and so is the same application.
- community.microfocus.com is a different subdomain and hence a different FQDN and so is a different application.
- www.microfocus.co.uk is a different domain name and hence a different FQDN and so is a different application.

The application can only have a single authentication management system with the following exceptions:

- Forms authentication and single network authentication (basic/digest/NTLM) is allowed.
- Forms authentication, single network authentication and application generated authentication such as bearer tokens is allowed.

User logins may not be “daisy chained”. For example, two forms authentication mechanisms are not permitted.

For web API applications only, the customer must provide a definition of the API endpoints:

- Dynamic Assessments
 - REST API - OpenAPI JSON specification or Postman collection with valid values for all parameters and a hard coded and long-lived authentication token
- Dynamic+ Assessments
 - REST API - OpenAPI JSON specification or Postman collection
 - SOAP – single SOAP WSDL file

Working examples, with valid values for all parameters, must be provided.

For mobile assessments, an application is a single installable application for a single hardware platform. Mobile applications submitted for testing must be in the form of a compiled IPA (iOS) or APK (Android).

Release Definition

A release is a particular iteration of a codebase. In Fortify on Demand, release versioning provides a useful way to differentiate and track scan activity. You can structure releases depending on your organization's reporting needs and development processes.

The following examples show how releases can be structured:

- Static assessments:
 - Create one main release, copied from an initial baseline release, for automated scans on builds from a continuous integration build server . Periodically, create branch releases for scenarios such as major deployments of code (using copy state), more detailed analysis (including 3rd party libraries and/or choosing manual audit for a baseline, or sandbox releases to do a one-time scan without affecting metrics).
 - Create a new release for every major product release (using copy state) and run scans during a release cycle before moving to the next release.
 - Create a release for every build. Fortify does not recommend this approach due to the lack of trending and increased overhead.
- Dynamic assessments:
 - Create a single release, based on the environment being scanned (development, staging, UAT, or production), for all scans. The release is usually named by the URL.
 - Create a new release for each major deployment (using copy state).
- Static plus dynamic assessments:
 - Implement the above examples by themselves or in combination. For example, you can implement the first static assessment example as the main approach, and either run dynamic scans against the main and major release branches or run dynamic scans against a separate release that is independent of static scans.
- Mobile assessments:
 - For assessments of only the mobile binary, implement the static assessment examples.
 - For assessments that include backend web services, implement the dynamic assessment examples.

In addition, you can assign different Software Development Life Cycle (SDLC) stages to a release to track it as it progresses through the SDLC. Fortify on Demand uses the following SDLC stages:

- Development
- QA/Test
- Production
- Retired

Note: New scans cannot be started for a retired release. If a release is retired while a scan is in progress, the scan will still finish.

Managing an Application

You can create, view, and edit applications, depending on your user permissions.

This section covers the following topics:

Creating an Application	41
Viewing Application Details	48
Editing Application Settings	51
Managing User Assignment to an Application	53
Viewing the Application Event Log	55
Deleting an Application	56

Creating an Application

Before you can start the initial security assessment of an application, you need to create a new application in Fortify on Demand.

To create an application:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **+New Application**.
The Create Application wizard appears.
3. In the **Application Details** page, define the application. Fields are required, unless otherwise noted.

17. Click **Create Application**.

You are redirected to the Overview page of your new application's release.

Viewing Application Details

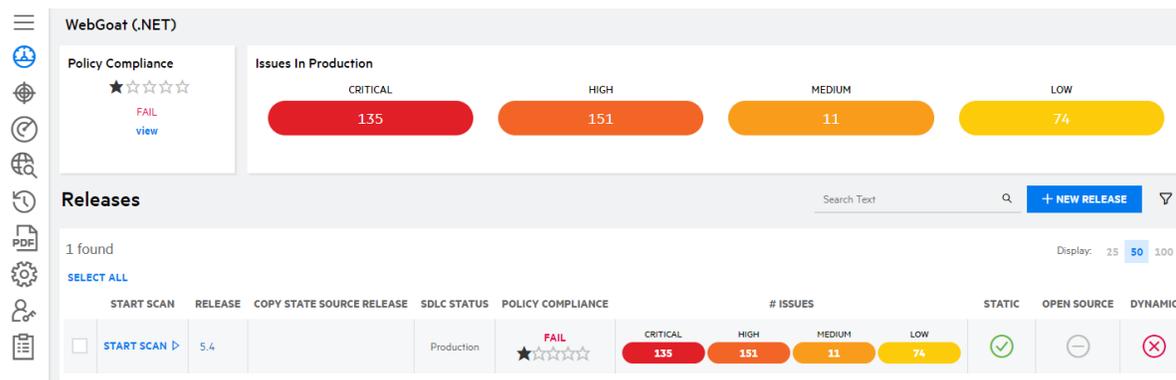

The Application Overview page displays an overview of the application and its releases. It serves as a dashboard for the application, offering a quick yet comprehensive snapshot of the application's production security risk. Here you can filter the application's releases, search for particular releases, create new releases, and start scans.

To view details of an application:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application that you want to view.

The Application Overview page appears. The page shows the following details about an application: production risk and policy compliance, security status, and a list of associated

releases (sorted from the latest to the earliest last completed scan date by default).

Navigating the Application Overview Page

The following table describes how to navigate the Application Overview page.

Task	Action
View the security policy applied to the application	Click View in the Policy Compliance box.
View combined metrics across the application's production releases	The Policy Compliance and Issues in Production boxes display the combined star rating and number of issues (including Application Monitoring issues) across an application's production releases .
View the application's security status	The Security Status box displays the Continuous Application Monitoring status.
Search the application's releases	Enter search word in the text box.
Create a release	Click + New Release .
Start a scan	Click Start Scan next to a release and select the scan type. The button is disabled for releases with the Retired SDLC status.
View additional release details	Click the release name.

Task	Action
View data composing part of a graph	Click a section of the graph.
View the most recent scan status for a release	<p>Hover over the relevant status icon. Click it to directly access the scan status details.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> STATIC DYNAMIC </div> <div style="display: flex; justify-content: space-around; align-items: center; margin-top: 5px;"> <div style="border: 1px solid #ccc; padding: 2px; text-align: center;"> ✓ </div> <div style="border: 1px solid #ccc; padding: 2px; text-align: center;"> ✗ </div> </div> <ul style="list-style-type: none"> Scheduled scans display the scheduled start date. The completion date calculation is based on the start date + SLO of the chosen assessment type + pause time + weekends. In the event that a scan is past the SLO, the expected completion date displays "Long running scan on <release>. Contact us for details."
Expand or collapse filters	Click expand all collapse all or the arrow next to the filter name.
Hide or display the filter list	Click ▼.
Remove applied filters	Click X or click X Clear Filters .

Filtering the Application Overview page

By default, the Application Overview page displays all results . You can customize the data displayed by applying filters.

Note: A filter only appears in the filter list when the results contain multiple values for that filter.

To filter the Application Overview page:

1. Click ▼ to display the filter list if it is not currently displayed.
2. Expand the filters you want to apply.
3. Select the filter values. The following table describes the Application Overview filters.

Filter	Description	Values
Dynamic Scan	Status of dynamic	Completed, Canceled, In Progress, Not Started

Filter	Description	Values
Status	scans	
Mobile Scan Status	Status of mobile scan	Completed, Canceled, In Progress, Not Started
Pass/Fail	User-defined Pass/Fail rating	Fail, Pass
Release Created Date	Date of release creation	
Scan Type	Type of scan	Static, Dynamic, Mobile, Network, Application Monitoring, Open Source
SDLC status	SDLC status of releases	Development, QA/Test, Production, Retired
Star Rating	5-star rating system	1, 2, 3, 4, 5
Static Scan Status	Status of static scans	Completed, Canceled, In Progress, Not Started

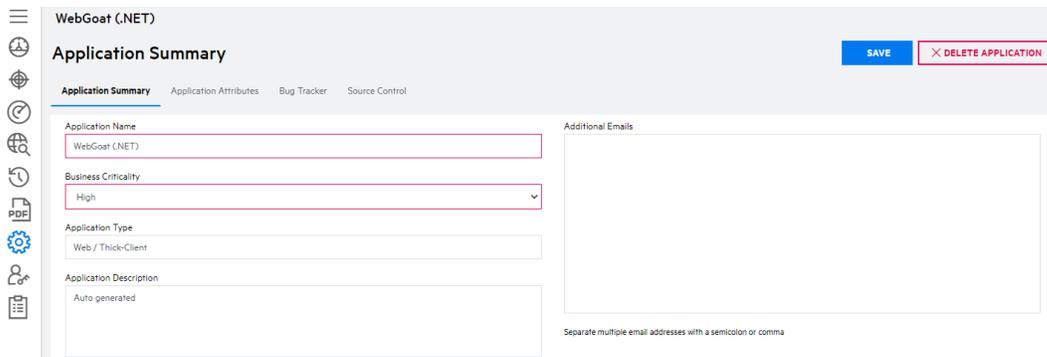

The page automatically refreshes with your filtered results. Applied filters are shown at the top of the page.

Editing Application Settings

You can edit application settings after the application has been created.

To edit application settings:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application that you want to edit.
3. Click **Settings**.
The Settings page appears.

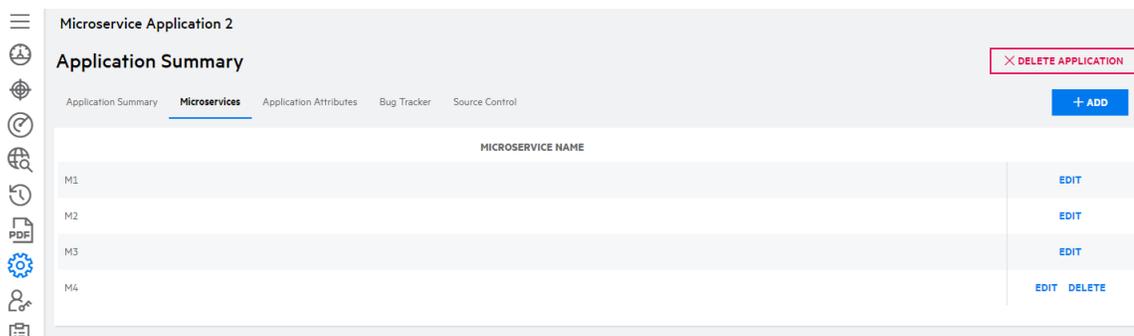

4. Select the tab that corresponds to the application settings you want to edit.
 - The **Application Summary** tab displays application details.

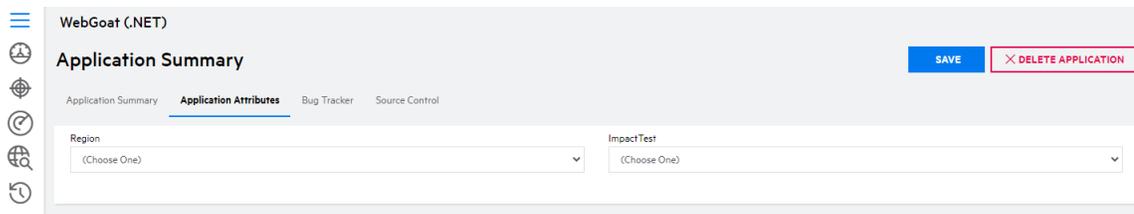

Field	Description
Application Name	Name of your application
Business Criticality	Business Criticality level
Application Type	Application type (not editable for microservice applications)
Application Description	(Optional) Description of the application that will help you manage multiple application
Additional Emails	(Optional) Email addresses that will receive notifications of activity related to the application

- (Microservice applications only) The **Microservices** tab displays existing microservices. You can add, edit, or delete microservices, as well as edit microservice attribute values.

Note: You cannot delete a microservice that is tied to a release.

- The **Application Attributes** tab displays system attributes as well as custom attributes.

- The **Bug Tracker** tab displays configuration settings for bug tracker integration. For more information, see ["Bug Tracker Integration" on page 348](#).
 - The **Source Control** tab displays configuration settings for source control integration. For more information, see ["Source Control Integration" on page 365](#).
5. Edit the application settings as desired.
 6. Click **Save**.
The application settings are saved.

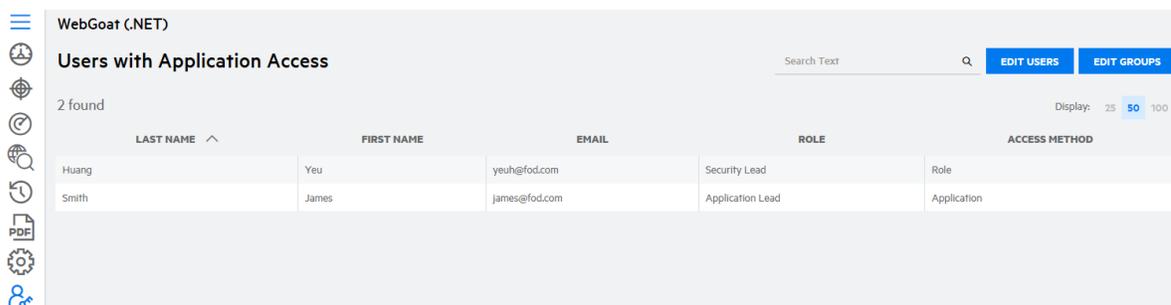

Managing User Assignment to an Application

Users with the **Manage Users** permission can manage user access to an application at the application level.

Note: Security Leads have access to all applications and cannot be removed.

To manage user access to an application:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of application for which you want to edit user access.
The Application Releases page appears.
3. Click **Access**.
The Users with Application Access page appears, displaying the list of users with access to the application.

4. Click **Edit Users**.
The Assign Users window appears.
5. You can perform the following tasks:

Task	Procedure
<p>Assign users to application</p>	<p>a. Click Edit Users.</p> <p>The Assign Users window appears.</p> <p>b. Select the Available tab.</p> <div data-bbox="652 464 1409 772" data-label="Image"> </div> <p>A list of non-Security Lead users that can be assigned to the application appears.</p> <p>c. Perform the following actions to select users:</p> <ul style="list-style-type: none"> ◦ Select the check box next to individual users. ◦ Select the ASSIGN check box to select displayed users. ◦ Select the Assign All Tenant Users check box to select all users. <p>You can use the search field to filter the application list.</p>
<p>Remove users from application</p>	<p>a. Click Edit Users.</p> <p>The Assign Users window appears.</p> <p>b. Select the Selected tab.</p> <div data-bbox="652 1371 1409 1680" data-label="Image"> </div> <p>A list of non-Security Lead users that are assigned to the application appears.</p> <p>c. Perform the following actions to remove users:</p>

Task	Procedure
	<ul style="list-style-type: none">○ Clear the check box next to individual users.○ Clear the ASSIGN check box to remove displayed users.○ Select the Unassign All Tenant Users check box to remove all users. <p>You can use the search field to filter the application list.</p>

6. Click **Save**.

The changes to the application's assigned users are saved.

To manage user access to applications at the user level, see ["Managing Application Assignment to a User" on page 292](#).

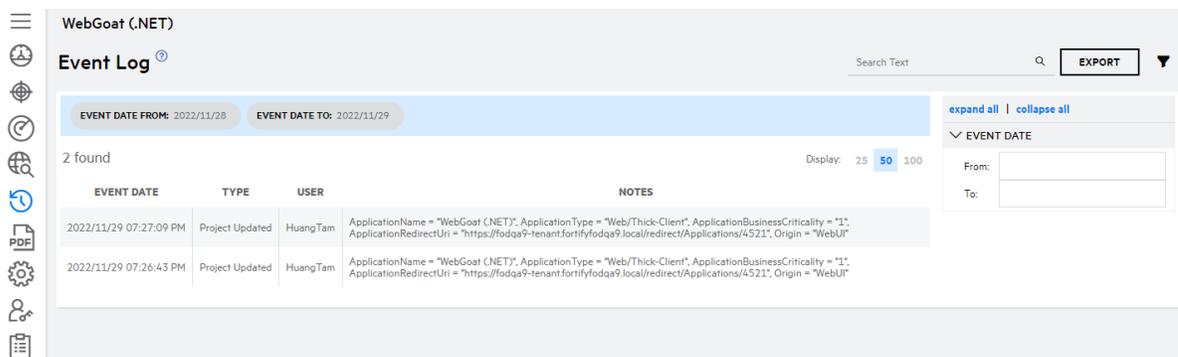

Viewing the Application Event Log

Users with the **Manage Applications** permission can view an application's event log. An application's event log logs all event related to the application:

- application creation, updates, and deletion
- release creation, updates, and deletion
- addition and removal of user and group access to the application
- scan initiation, updates, and completion
- entitlement consumption
- report creation, publication, download, and deletion
- FPR downloads
- data exports
- advanced audit settings creation, updates, and deletion

To view an application's event log:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application for which you want to view the event log.
3. Click **Event Log**.
The Event Log page appears.

4. You can perform the following tasks:

Task	Action
Export the event log of the last 13 months	Click Export . A .csv file is saved locally to the folder specified in your browser settings.
Search the event log	Type a keyword or phrase in the search text field and click Enter .
Hide or display the filter list	Click ▼ .
Expand or collapse filters	Click expand all collapse all  or the arrow next to the filter name.
Remove applied filters	Click X or click Clear Filters at the top of the page. The filter is set to the last 24 hours by default.

Related Topics

For information about viewing all events that occur in your portal, see "[Viewing the Administration Event Log](#)" on page 276.

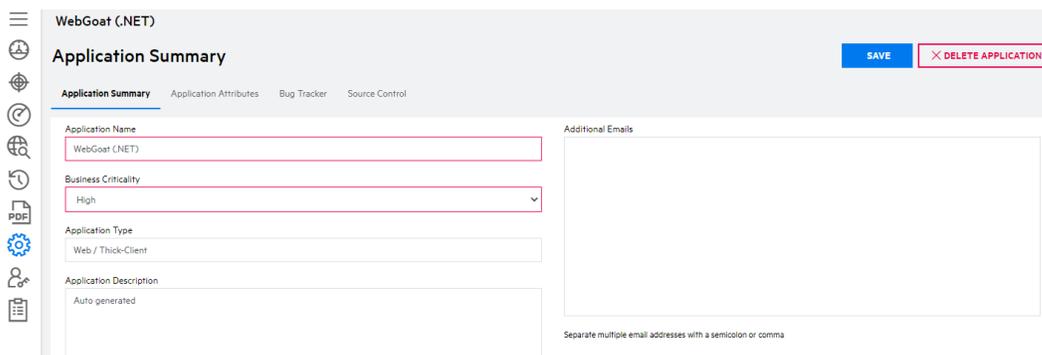

Deleting an Application

Deleting an application removes all data associated with the application and cannot be undone. Application data is purged from Fortify on Demand after 72 hours. If an application was deleted in error, contact support within 72 hours of deleting the application.

Note: If you need to reuse the name of a deleted application, wait 72 hours after deleting the application before creating a new one.

To delete an application:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the application that you want to delete.
3. Click **Settings**.
The **Application Summary** page appears.

4. Click **X Delete Application** .
A confirmation message appears.
5. Click **Yes** to delete the application.
You are returned to Your Applications page.

Managing a Release

You can create, view, and edit releases, depending on your user permissions.

This section covers the following topics:

Creating a Release	57
Viewing Release Details	59
Overriding the Security Policy of a Release	66
Editing Release Settings	67
Deleting a Release	68

Creating a Release

You can create a new release of an existing application. When creating a new release, you have the option to start fresh or carry over vulnerabilities and other details from a previous release.

To create a new release:

1. Select the **Applications** view.
Your Applications page appears.

2. Click the application for which you want to create a new release.
3. Click **+ New Release**.

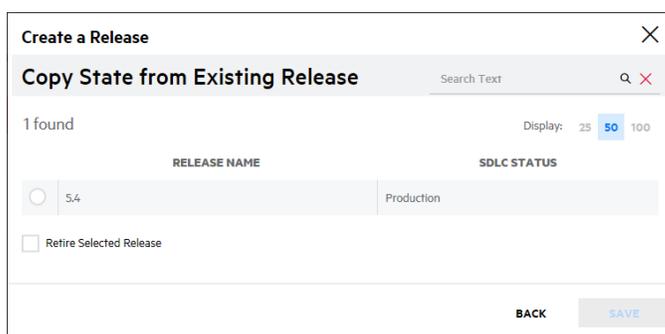

The Create Release wizard appears.

4. In the **Release Details** page, complete the fields as needed. Fields are required, unless otherwise noted:

Field	Description
Release Name	Type the name of your release.
Release Description	(Optional) Type a description that helps describe the release.
SDLC Status	Select the Software Development Life Cycle stage of the release: Development, QA/Test, Production . The Retired option is not available.
Release Attributes	Specify the release attributes.
Microservice (microservice applications only)	Select the microservice that will be linked to the release from the drop down list. A release must be linked to a microservice; a microservice can be linked to multiple releases.
Copy State from Existing Release	(Optional, selected by default) Select Copy State from Existing Release to carry over data from a previous release

Field	Description
Release Name	Type the name of your release.
	to the new one. The following data is copied: release owner, scan settings for all scan types, star rating, issue counts, and issue details (including issue history, bug tracker links, and attached screenshots). Note: Data from completed and imported scans are copied. Data from paused and in-progress scans, including scan settings, are not copied. Fix validated issues are not copied.

5. If you selected **Copy State from Existing Release**, click **Next**. Otherwise, skip to step 7.

6. In the **Copy State from Existing Release** page, select the release that you want to carry over the vulnerabilities and other details from the list.
7. Click **Save**.

You are redirected to the Overview page of the new release.

Note: If you selected to copy data from a previous release, the copy release data process can slow the screen refresh, so you might not see the Overview page immediately.

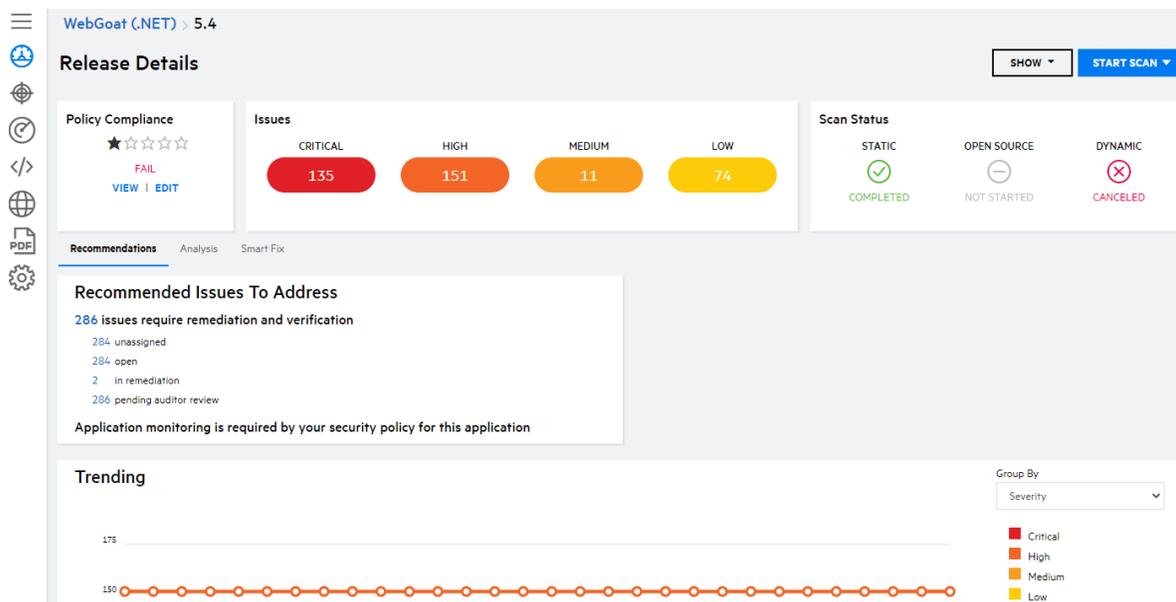

Viewing Release Details

The Release Overview page displays an overview of the release. It serves as a dashboard for the release, offering a quick yet comprehensive snapshot of the release's security risk. Through a series of easy-to-read visuals, you can see all the key metrics of your release. Many of the visual elements are clickable so that you can drill down into the data sets displayed.

To view details of a release:

1. Select the **Applications** view.
Your Applications page appears.

2. Click **Your Releases**.
Your Releases page appears.
3. Click the name of the release that you want to view.
The Release Overview page appears.

The top section of the Release Overview page summarizes all scan results for the release. The Policy Compliance box shows the Star Rating and Pass/Fail status. The Issues box shows the number of vulnerabilities at each severity level. The Scan Status box shows the most recent scan statuses for the release.

The tabs display several analyses of the scan results, with links to drill down into issues

Navigating the Release Overview Page

The following table describes how to navigate the Release Overview page.

Task	Action
View the copy state source (if applicable)	Click the link below the release name. <div style="border: 1px solid #ccc; padding: 5px; margin: 5px 0;"> UAT_test > UATv1_v2_CopyST Release Details Copied from "UATv1" </div>
Show or hide fixed issues	Click Show... Fixed to switch between showing and hiding Fix Validated issues.
Show or hide suppressed issues	Click Show... Suppressed to switch between showing or hiding Suppressed issues.

Task	Action
Start a scan	Click Start Scan and select the scan type from the list. The button is disabled for releases with SDLC status of Retired .
View the most recent scan status for the release	Hover over the relevant status icon. Click it to directly access the scan status details.  <ul style="list-style-type: none"> • Scheduled scans display the scheduled start date. • The completion date calculation is based on the start date + SLO of the chosen assessment type + pause time + weekends. In the event that a scan is past the SLO, the expected completion date displays "Long running scan on <release>. Contact us for details."
View the security policy applied to the parent application	Click View in the Policy Compliance box.
Override the policy compliance	Click Edit in the Policy Compliance box.
View an analysis of scan results	Select a tab below the overview boxes. For more information, see "Release Overview Graphs" below
View issues filtered by issue severity or scan type	Click the links in the Issue and Scan Status boxes.

Release Overview Graphs

The tabs on the Release Overview page display visual representations of the scan results, with links to drill down into issues

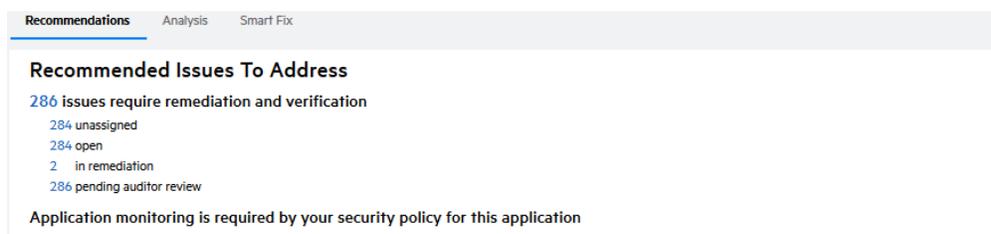

- ["Recommendations" on the next page](#)
- ["Analysis" on page 63](#)
- ["Smart Fix \(static scans\)" on page 64](#)

- ["App Information \(mobile scans\)" on page 65](#)
- ["Reputation \(mobile scans\)" on page 65](#)

Note: Showing fixed and suppressed issues increases the vulnerabilities in the count. The updated count is also represented in the vulnerability graphs.

Recommendations

The **Recommended Issues To Address** section lists why the release is failing the security policy. If specific issues are causing the release to fail, you can drill directly into those issues. If your policy requires a minimum scan frequency, that information is displayed here as well. Releases that are passing and do not have scan frequency requirements do not have this section.

The **Trending** section displays a line graph of the release's vulnerability trends over time, measured in terms of the selected facet. Hover over a data point to view the count and type. Click a label to switch between showing or hiding that data set.

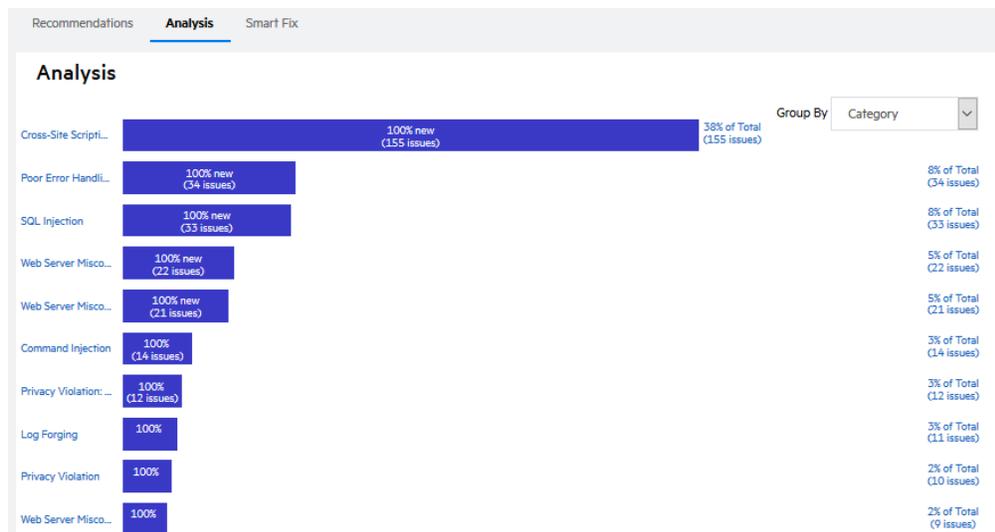

Facet	Description
Auditor Status	Auditor status of issues
Developer Status	Developer status of issues
Is Assigned	Assignment status of issues: False, True
Issue Status	Issue status: New, Existing, Reopen, and Fixed
Issue Suppressed	Suppression status of issues: False, True
Kingdom	Seven Pernicious Kingdoms classification
Severity	Issue severity: Critical, High, Medium, Low
OWASP 2017	OWASP Top 10 2017 classification
OWASP 2021	OWASP Top 10 2021 classification
OWASP ASVS 4.0	OWASP ASVS 4.0 classification
GDPR	GDPR classification from Fortify Software Security Research (SSR)
PCI 3.2	PCI 3.2 classification
PCI40	PCI 4.0 classification
PCISSF12	PCI SSF version 1.2
STIG52	DISA STIG 1.2 classification
FISMA	FISMA classification
Is Closed	Resolution status of issues: False, True
OWASP Mobile Top 10	OWASP Mobile Top 10 classification
Scan Type	Issue scan type: Static, Dynamic, Mobile

Analysis

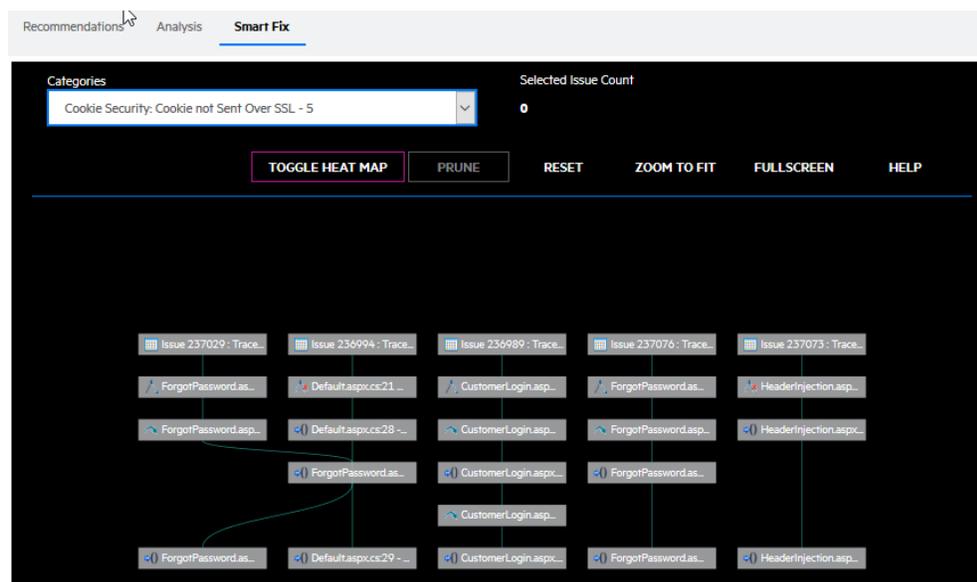

The **Analysis** tab displays a bar graph of the release's vulnerabilities divided into groups. The categories displayed depend on the Aggregation facet selected: **Assignment, Auditor status, Category, Developer Status, Scan Type, and OWASP 13.**

Drill down into a group by clicking any of the bars in the graph. For example, if you click the **Privacy Violation** bar in the **Category** facet, you are redirected to a filtered Issues page displaying privacy violation vulnerabilities.

Smart Fix (static scans)

The **Smart Fix** tab is available once a static scan has been performed. It displays an analysis trace diagram that visualizes node execution order across static issues in a vulnerability category and provides insight into shared data flows across those issues. This information can help identify optimal fix locations and remediation strategies.

Select a vulnerability category in the **Categories** list to view its analysis trace diagram. You can interact with the diagram in the following ways:

- Scroll up and down to zoom in and out, respectively.
- Click a node to highlight shared paths.
- Click an issue icon to drill down into the issue.
- Manipulate the diagram using the toolbar commands:
 - **Toggle Heat Map:** enables / disables highlighting of data flows
 - **Prune** (available when a node is selected): narrows the diagram to the combined data flow of the selected issues
 - **Reset:** resets the diagram to the default view of the selected issue category
 - **Zoom To Fit:** resizes the entire diagram to fit in the display without resetting or pruning
 - **Full Screen:** expands the diagram in full screen mode

App Information (mobile scans)

The **App Information** tab displays the following information about a mobile application's binary file: the platform, application name, identifier (package name), version, file size, minimum OS requirements, and device requirements.

Recommendations	Analysis	Trending	App Information	Reputation
Platform				iOS
Name				iGoat
Identifier				com.swaroop.iGoat
Version				3.0 (1)
File Size (bytes)				11028827
Minimum OS Requirements				9.0
Device Requirements				armv7

Reputation (mobile scans)

Fortify on Demand's Mobile Reputation service performs a reputation analysis of traffic endpoints discovered while testing a mobile application. The **Reputation** tab displays the analysis results. It lists all identified hosts and whether each is in good standing. Mobile scan results also include dedicated vulnerabilities for identified hosts not in good standing.

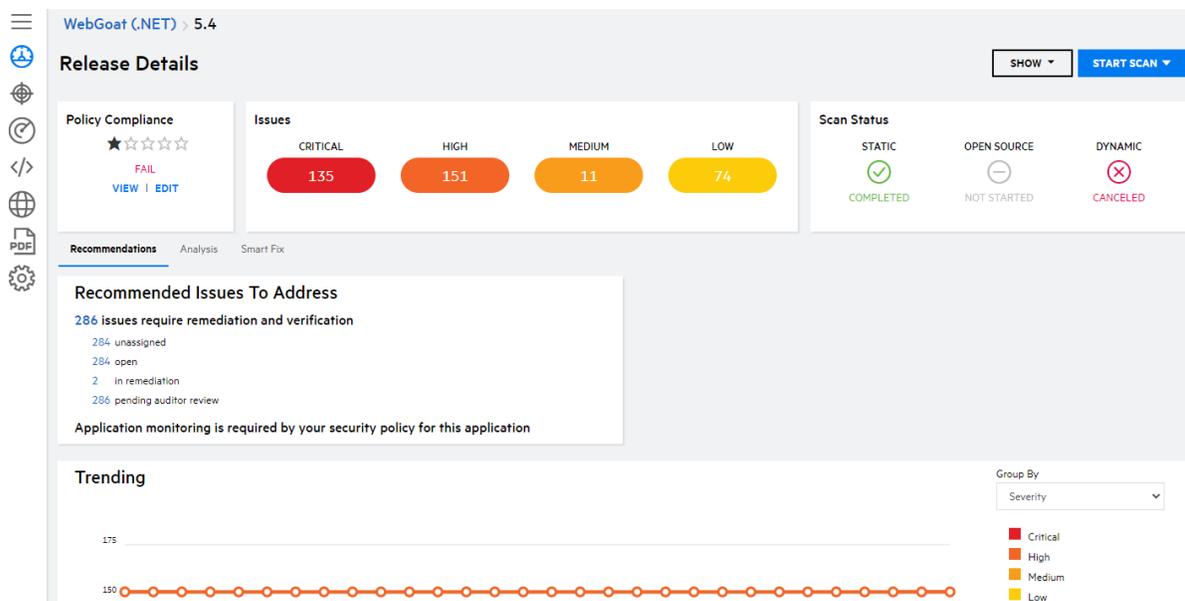

Analysis	Trending	Reputation
HOST NAME		GOOD STANDING

Overriding the Security Policy of a Release

Security Leads can manually override the security policy of a release by setting the release as passing or failing. This capability allows you to better reflect real-world exceptions process in the portal without artificially suppressing issues. The justification for the exception is logged in the application's event log. The status of the release automatically reverts to the official security policy on the next scan.

To override the security policy of a release:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application containing the release you want to edit.
The Application Overview page appears.
3. Click the name of the release for which you want to override the security policy.
The Release Overview page appears.

4. Click **EDIT** in the Policy Compliance box.
The Compliance Override modal window appears.
5. Type the justification for changing the policy compliance results in the field.

6. Click **Set to Pass** or **Set to Fail**.

You are returned to the Release Overview page. Your policy override is displayed in the Policy Compliance box.

Related Topics:

- For information on Star Ratings, see ["Five-Star Assessment Rating" on page 20](#).
- For information on managing security policies, see ["Policy Management" on page 301](#).

Editing Release Settings

You can edit release settings after a release has been created.

To edit the release settings:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears, displaying a list of your releases.
3. Select the release that you want to edit.
4. Click **Settings**.

The Release Summary page appears.

The screenshot shows the 'Release Summary' page for 'WebGoat (.NET) 5.4'. The page has a sidebar with navigation icons and a main content area. The main content area has a title 'Release Summary' and two buttons: 'SAVE' and 'DELETE RELEASE'. Below the title, there are three input fields: 'Release Name' with the value '5.4', 'SDLC Status' with a dropdown menu showing 'Production', and 'Owner' with a dropdown menu showing '(Choose One)'. To the right of these fields is a 'Release Description' text area containing the text '5.4'.

5. Edit the Release Summary page as desired. Fields are required unless noted otherwise.

Field	Description
Release Name	Name of the release
Microservice	(Microservice applications only) Name of the microservice linked to the release
SDLC Status	Software Development Lifecycle stage of the release
Owner	Owner of the release who receives email notifications of scan status updates to the release
Run Debricked Open Source Scan	(Available for tenants with Sonatype entitlements) Select the check box to switch the software composition analysis tool from Sonatype to Debricked. The setting cannot be reverted once it has been saved. The tenant must have active Debricked entitlements to successfully run Debricked scans after the switch. Note: If your tenant has inactive Sonatype entitlements and active Debricked entitlements, this option does not apply; open source are always powered by Debricked.
Release Description	(Optional) Description of the release that helps describe the release.

6. Click **Save** to save your changes.

Deleting a Release

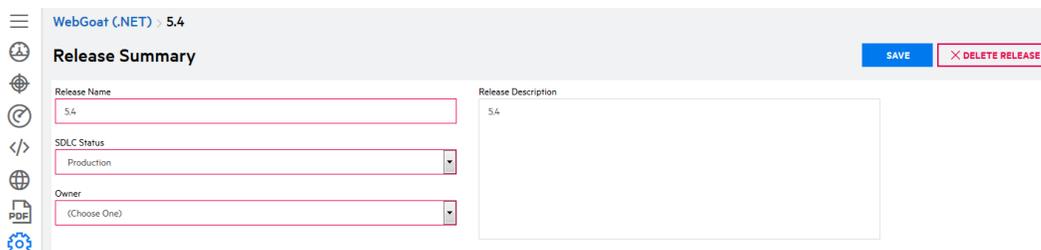

Users with the **Create Applications** permission can delete a release. Deleting a release removes all data associated with the release and cannot be undone. Release data is purged from Fortify on Demand after 72 hours. If a release was deleted in error, contact support within 72 hours of deleting the release.

Note: If you need to reuse the name of a deleted release, wait 72 hours after deleting the release before creating a new one.

To delete a release:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears, displaying a list of your releases.

3. Click the release that you want to delete.
4. Click **Settings**.
5. Click **x Delete Release**.

6. Click **Yes**.
You are returned to the Release Overview page.

Viewing Applications in the Tenant

You can review the security status of multiple applications simultaneously. Your Applications page is the default landing page after logging in to Fortify on Demand. It displays a high-level overview of your applications in Fortify on Demand, with a focus on the risk and policy compliance of production releases.

To view Your Applications page:

1. Select the **Applications** view.

Your Applications page appears. The grid shows the following details about each application: application name, number of releases, business criticality, the combined star rating and number of issues across production releases, the most recent scan status across all releases, and the most recent risk-relevant change.

NAME	PRODUCTION RISK & POLICY COMPLIANCE				SCAN & SECURITY STATUS				
	FAIL	CRITICAL	HIGH	MEDIUM	LOW	STATIC	OPEN SOURCE	DYNAMIC	Re
<input type="checkbox"/> Jeopardy (PHP) 2 RELEASES Business Criticality: HIGH	★☆☆☆☆	160	5	0	147	✓	⊖	⊖	20

View details of an application	Click the application name.
View the security policy applied to an application	Click the star rating.
View combined metrics across an application's production releases	The Production Risk & Policy Compliance column displays the combined star rating and number of issues (including Application Monitoring issues) across an application's production releases.
View the most recent scan status across an application's releases	<p>Hover over the relevant status icon. Click it to directly access the scan status details.</p> <p> <small>STATIC DYNAMIC MONITORING</small>  </p> <ul style="list-style-type: none"> • Scheduled scans display the scheduled start date. • The expected completion date is calculated based on the scan start date + SLO of the chosen assessment type + pause time + weekends. In the event that a scan is past the SLO, the expected completion date displays "Long running scan. Contact us for details."

Task	Action
View the most recent risk-relevant change for an application.	The Most Recent Change column displays the most recent change from the following list: <ul style="list-style-type: none">• Risk profile updated• Release created• Release deployed to production• New Application Monitoring vulnerabilities detected• New dynamic vulnerabilities detected• New static vulnerabilities detected• New mobile vulnerabilities detected• Business criticality updated• Release passing security policy• Release failing security policy

Filtering Your Applications Page

By default, Your Applications page displays all applications, which are sorted from top to bottom based on the following criteria:

- The group that the application belongs to, sorted by descending priority:
 - production: application with one or more production releases (sorted by Pass/Fail status, where failing > unassessed > passing)
 - pre-production: application with one or more dev or QA releases
 - retired: application with no production, dev, or QA releases
- Within each group (production, pre-production, retired), the applications are sorted by business criticality (from high to low), followed by the number of issues by severity

You can limit the applications displayed as well as change the sort order by applying filters.

To filter Your Applications page:

1. Click ▼ to display the filter list if it is not currently displayed.
2. If desired, select the sort order from the **Sort** list. The values are: **Production Risk** (default), **Most Recent Change**, **Application Name (A to Z)**, and **Application Name (Z to A)**.
3. Expand the filters that you want to apply. The following table describes the application filters.

Note: A filter only appears in the filter list when the results contain multiple values for that filter.

Filter	Description	Values
Application Monitoring	Application Monitoring status of an application	Enabled (No issues), Enabled (Issues found), Not Enabled
Application Type	The application type, selected during the application creation process	Mobile, Web/Thick-Client
Business Criticality	Business Criticality of an application	High, Medium, Low
Has Microservices	Whether the application has microservices	false, true
Dynamic Scan Status	Status of dynamic scans	Scheduled, In Progress, Completed, Canceled, Waiting
Mobile Scan Status	Status of mobile scans	Scheduled, In Progress, Completed, Canceled, Waiting
Most Recent Change	Category of the most recent change detected for an application	New Monitoring Vulnerabilities Detected, Release Passing Security Policy, Business Criticality Updated, Release Created, New Dynamic Vulnerabilities Detected, Release Failing Security Policy
Pass/Fail	User-defined Pass/Fail rating	Fail, Pass, Unassessed
Scan Type	Scan type	Static, Dynamic, Mobile, Open Source
Star Rating	5-star rating system	1, 2, 3, 4, 5
Static Scan Status	Status of static scans	In Progress, Completed, Canceled, Waiting
<Custom application	Application attributes that are	User-defined

Filter	Description	Values
attribute>	picklists	
<Custom microservice attribute>	Microservice attributes that are picklists	User-defined

4. Select your desired filter values.

Your Applications page automatically refreshes with your filtered results. Applied filters are shown at the top of the page.

Viewing Releases in the Tenant

In addition to reviewing multiple applications at once, you can also review the details of individual releases across multiple applications simultaneously. Your Releases page displays a high-level overview of your releases in Fortify on Demand.

To view Your Releases page:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.

Your Releases page appears. The grid shows the following details about each release: application name, associated release name, number of issues found in the release, star rating, and current scan statuses.

START SCAN	APPLICATION	RELEASE	SDLC STATUS	APPLICATION CREATED DATE	# ISSUES
<input type="checkbox"/> START SCAN	WebGoat (NET)	5.4	Production	2016/05/13	CRITICAL: 135, HIGH: 151, MEDIUM: 11, LOW: 74
<input type="checkbox"/> START SCAN	Jeopardy (PHP)	3.1	Production	2016/05/13	CRITICAL: 160, HIGH: 5, MEDIUM: 0, LOW: 147
<input type="checkbox"/> START SCAN	Jeopardy (PHP)	3.2	Development	2016/05/13	CRITICAL: 160, HIGH: 5, MEDIUM: 0, LOW: 147
<input type="checkbox"/> START SCAN	Zero Security (COBOL)	12.6.8	Production	2016/05/13	CRITICAL: 11, HIGH: 4, MEDIUM: 0, LOW: 0
<input type="checkbox"/> START SCAN	OpenSSL (C Source)	1.0.2a	Production	2016/05/13	CRITICAL: 64, HIGH: 156, MEDIUM: 0, LOW: 0
<input type="checkbox"/> START SCAN	Rubix (JAVA-No Source)	0.1	Production	2016/05/13	CRITICAL: 1, HIGH: 7, MEDIUM: 0, LOW: 0
<input type="checkbox"/> START SCAN	IGoat Android (JAVA)	2.4	Production	2016/05/13	CRITICAL: 43, HIGH: 122, MEDIUM: 18, LOW: 15

3. Select the tabs to filter releases by their SDLC status. The default SDLC status is **All**, which displays all of your releases. You can change the default SDLC status in your account settings.

Navigating Your Releases Page

The following table describes how to navigate Your Releases page.

Task	Action
Create an application	Click +New Application .
Search the release list	Type a keyword or phrase in the search text box and click Enter . To remove the search results, remove the text from the search box and click Enter or remove the applied filter. For information, see " Searching Applications and Releases " on page 79.
Export data as a .csv file	Click Export . A .csv file containing detailed information on all vulnerabilities is saved locally to a folder specified in your browser settings. Note: The Export functionalities in the Tenant Dashboard, Your Releases, and Release Issues pages outputs the same column fields. Currently applied filters are also applied to the export.
Change the grid columns	<ol style="list-style-type: none">1. Click .2. Use the check boxes to make your selections.3. Click Save.
Hide or display the filter list	Click  .
Expand or collapse filters	Click  or the arrow next to the filter name.
Remove applied filters	Click X or click Clear Filters at the top of the page.
Filter releases by SDLC status	Select a tab corresponding to an SDLC status. The selected SDLC status is preserved when

Task	Action
	moving between views. 
Sort the release list by column	Click a column header. The arrow next to the header indicates the sort order of the data. To reverse the order, click the header again.
Edit release attributes for multiple releases	<ol style="list-style-type: none"> 1. Select the check box next to individual releases or click select all to select all releases on the page. 2. Click Edit Attributes. The Edit Attribute window opens.  3. Update the fields as needed. 4. Click Save. For more information on release attributes, see "Creating a Release" on page 57
Start a scan	Click Start Scan and select the scan type.
View additional details of an application or release	Click an application or release name.
View the most recent scan status for a release	Hover over a status icon. Click it to directly access the scan status details.  <ul style="list-style-type: none"> • Scheduled scans display the scheduled start date. • The completion date calculation is based on the start date + SLO of the chosen assessment type + pause time + weekends. In the event that a scan is past the SLO, the

Task	Action
	expected completion date displays "Long running scan on <release>. Contact us for details."
View the security policy applied to a release's parent application	Click a star rating.

Filtering Your Releases Page

By default, Your Releases page displays all of your releases. You can limit the releases displayed by applying filters.

To filter Your Releases page:

1. Click ▼ to display the filter list if it is not currently displayed.
2. Expand the filters you want to apply. The following table describes the release filters.

Note: A filter only appears in the filter list when releases have multiple values for that filter.

Filter	Definition	Values
Application Created Date	Date when the application was created.	< 7 days, < 30 days, < 90 days, < 180 days
Application Type	The application type, selected during the application creation process	Mobile, Web/Thick-Client
Business Criticality	Criticality of the applications	High, Medium, Low
Dynamic Scan Status	Status of dynamic scans	Not Started, Canceled, Completed, In Progress, Waiting
MicroserviceName	Microservice names	User-defined
Mobile Scan Status	Status of mobile scans	Not Started, Canceled, Completed, In Progress, Waiting
Pass/Fail	User-defined Pass/Fail rating	Fail, Pass
Scan Type	Scan type	Static, Dynamic, Mobile

Filter	Definition	Values
SDLC Status	SDLC status of releases	Production, QA/Testm Development, Retired
Star Rating	5-star rating system	1, 2, 3, 4, 5
Static Scan Status	Status of static scans	In Progress, Completed, Canceled, Waiting
<Custom release attribute>	Release attributes that are picklists	User-defined

3. Select your desired filter values.

Your Releases page automatically refreshes with your filtered results. Applied filters are shown at the top of the page.

Searching Applications and Releases

In addition to the top-level Search box that is available in the portal toolbar, you can also use the **Search Text** box available on each grid to search for application names, release names, keywords, and URLs within the display context of the grid.

Searching Text

To search for an application or release in a grid:

1. Type the string that you want to search for in the **Search Text** box.

You do not need to type the entire string in the box. For example, if you are searching for an application named *Test App 1*:

- If you type **Test** in the box, your search results **will** include *Test App 1*.
 - If you type **Tes** in the box, your search results **will not** include *Test App 1*.
 - If you type **Tes*** in the box, your search results **will** include *Test App 1*.
2. Click **Enter**.
The page refreshes with your search results.
 3. Click the name of the desired application or release. The page refreshes with the selected application or release page and clears the search box.

Removing the Search Results

To remove the applied search filter, perform one of the following:

- Remove the search string from the search box.
- Click the browser **Back** arrow.

Creating Deep Links

Fortify on Demand supports deep linking to applications, releases, scans, and issues.

To create deep links, use the following path formats:

- Applications: `https://<fod_domain>/redirect/Applications/<application_id>`
- Releases: `https://<fod_domain>/redirect/Releases/<release_id>`
- Scans: `https://<fod_domain>/redirect/Scans/<scan_id>`
- Issues: `https://<fod_domain>.com/redirect/Issues/<issue_id>`

Note: The top of the issue details panel displays the issue ID.

`236127` <http://zero.webappsecurity.com:80/force>

where `<fod_domain>` is the Fortify on Demand data center domain:

- US: `ams.fortify.com`
- EMEA: `emea.fortify.com`
- APAC: `apac.fortify.com`
- FedRAMP: `fed.fortifygov.com`

Chapter 4: Running Assessments

Fortify on Demand offers comprehensive security testing across three assessment types: static, dynamic, and mobile.

This section contains the following topics:

- [Static Assessments](#) 81
- [Open Source Software Composition Analysis](#) 116
- [Dynamic Assessments](#) 124
- [Mobile Assessments](#) 154
- [Entitlement Consumption](#) 166
- [Managing Scans](#) 166

Static Assessments

A static assessment analyzes an application’s source code, bytecode, or binaries for possible security vulnerabilities. Static assessments are powered by Fortify Static Code Analyzer. Static testing using Fortify Static Code Analyzer involves:

1. Translating the source code into an intermediate translated format
2. Analyzing the translated code

This section contains the following topics:

- [Fortify Static Code Analyzer Requirements](#) 81
- [Preparing Static Assessment Files](#) 91
- [Configuring a Static Scan](#) 108
- [Uploading a Static Assessment Payload Through the Portal](#) 112
- [Static Assessment Payload Validation](#) 115

Fortify Static Code Analyzer Requirements

Note: Fortify Static Code Analyzer updates can occur between major releases of Fortify on Demand. Fortify Static Code Analyzer requirements are updated in the documentation for the major release.

This section contains the following topics:

- [Supported Languages](#) 82

[Supported Compilers](#) 84
[Supported Libraries, Frameworks, and Technologies](#)84

Supported Languages

Fortify Static Code Analyzer supports the programming languages listed in the following table.

Language / Framework	Versions
.NET (Core)	2.0-8.0
.NET Framework	2.0-4.8
ABAP/BSP	6
ActionScript	3.0
Apex	55-60
Bicep	0.12.x-0.15.31
C#	5-12
C	C11, C17, C23 (see "Supported Compilers" on page 84)
C++	C++11, C++14, C++17, C++20 (see "Supported Compilers" on page 84)
Classic ASP (with VBScript)	2.0, 3.0
COBOL	IBM Enterprise COBOL for z/OS 6.1-6.3 (CICS, IMS, DB2, and IBM MQ) Visual COBOL 6.0-8.0
ColdFusion	8-10
Dart	2.12-3.1
Docker (Dockerfiles)	any
Flutter	2.0-3.13
Go	1.12-1.22
HCL	2.0

Language / Framework	Versions
	<p>Note: HCL language support is specific to Terraform and supported cloud provider Infrastructure as Code (IaC) configurations.</p>
HTML	5 or earlier
Java (including Android)	7–21
JavaScript	ECMAScript 2015–2023
JSON	ECMA-404
JSP	1.2–2.1
Kotlin	1.3–1.9
MXML (Flex)	4
Objective-C/C++	2.0 (see "Supported Compilers" on the next page)
PHP	7.3–8.3
PL/SQL	8.1.6
Python	2.6–2.7, 3.0–3.12
Ruby	1.x
Scala	2.11–2.13, 3.3–3.4
Solidity	0.4.12–0.8.21
Swift	5.0–5.10 (see "Supported Compilers" on the next page for supported swiftc versions)
T-SQL	SQL Server 2005, 2008, 2012
TypeScript	3.6–5.2
VBScript	2.0, 5.0
Visual Basic (VB.NET)	15.0–16.9

Language / Framework	Versions
Visual Basic	6.0
XML	1.0
YAML	1.2

Supported Compilers

Fortify Static Code Analyzer supports the compilers listed in the following table.

Compiler	Versions	Operating Systems
gcc	GNU gcc 6.x–10.4, 11, 12, 13	Windows, Linux, macOS
	GNU gcc 4.9, 5.x	Windows, Linux, macOS, AIX
g++	GNU g++ 6.x–10.4, 11, 12, 13	Windows, Linux, macOS
	GNU g++ 4.9, 5.x	Windows, Linux, macOS, AIX
OpenJDK javac	9, 10, 11, 12, 13, 14, 17, 21	Windows, Linux, macOS, AIX
Oracle javac	7, 8, 9	Windows, Linux, macOS
cl (MSVC)	2015, 2017, 2019, 2022	Windows
Clang	14.0.3, 15.0.0	macOS
Swiftc	5.8, 5.8.1, 5.9, 5.9.2, 5.10 ¹	macOS

¹Fortify Static Code Analyzer supports applications built in the following Xcode versions: 14.3, 14.3.1, 15, 15.0.1, 15.1, 15.2, 15.3.

Supported Libraries, Frameworks, and Technologies

Fortify Static Code Analyzer supports the libraries, frameworks, and technologies listed in this section with dedicated Fortify Secure Coding Rulepacks and vulnerability coverage beyond core supported languages.

Java

Adobe Flex Blaze DS	Apache Slide	iBatis	Mozilla Rhino	Spring MVC

Datadog	Grafana			

Preparing Static Assessment Files

The first step in a static assessment is to prepare your application's source code and/or compiled files. To prevent rejection of the static assessment and get comprehensive and accurate scan results, prepare the files according to the instructions provided for the programming language or technology stack of the application.

Note: For information on preparing files for open source software composition analysis, see ["Preparing Open Source Assessment Files" on page 117](#).

This section contains the following topics:

Static Assessment File Requirements	91
Installing and Using the Fortify ScanCentral SAST Client	92
Preparing .NET Application Files	93
Preparing Java Application Files	95
Preparing JavaScript Technology/HTML/XML Files	96
Preparing Kotlin Application Files	97
Preparing ABAP (SAP) Application Files	97
Preparing C and C++ Application Files	100
Preparing Classic ASP, VBScript, and Visual Basic Application Files	101
Preparing Dart and Flutter Application Files	101
Preparing COBOL Application Files	102
Preparing ColdFusion Markup Language (CFML) Application Files	102
Preparing Dockerfiles and Infrastructure as Code (IaC) Files	102
Preparing Go Application Files	102
Preparing PHP Application Files	103
Preparing Python Application Files	104
Preparing Ruby Application Files	105
Preparing Solidity Application Files	105
Preparing Salesforce (Apex and Visualforce) Application Files	106
Preparing Scala Application Files	106
Preparing Android Application Files (Source Code)	107
Preparing iOS Application Files (Source Code)	107

Static Assessment File Requirements

Applications submitted for static assessments must meet the following file requirements:

- Application files must be packaged in a non-password protected zip file. Other file extensions such as tarball, rar, tar, and 7z, are not supported.
- The maximum payload size is 5 GB for a monolithic application and 100 MB for a microservice application; free trials are restricted to a maximum payload size of 150 MB.
- The payload must contain at least one of the following file types:
 - Binary/compiled files: binary/compiled files are the debug compiled executable files produced by compiling your application's source code files and the executable library and resource files produced by third party dependencies that are used by your application.
 - Source code files: source code files are the text files compiled to produce the application files.
- Application files must meet specific requirements for the technology stack under which the application is submitted. Make sure to prepare the application files as instructed for that technology stack.
- In general, code submitted must be fully deployable. For example, this means that a JAR file must have executable code.

Installing and Using the Fortify ScanCentral SAST Client

Fortify offers a stand-alone Fortify ScanCentral SAST client for automatically packaging all necessary dependencies and source code required for static scanning and the files required for Debricked open source scanning. The following languages are supported: .NET and .NET Core (MSBuild projects), Apex, Classic ASP, ColdFusion, Dockerfiles, Go, Java (Gradle and Maven projects), Javascript/Typescript, PHP, Python, and Ruby.

Important! The stand-alone Fortify ScanCentral SAST client is a component of the on-premises Fortify ScanCentral SAST software and is used to package code to send to a Controller for scanning. Fortify on Demand uses only the packaging feature of the Fortify ScanCentral SAST client. Details that are relevant to packaging your source code has been provided.

The latest version of the Fortify ScanCentral SAST client is available from the Tools page in the portal. Installation instructions are available in the README.txt file stored in the zip file.

For more information about using the Fortify ScanCentral SAST client, see the [Fortify Software Security Center Documentation](#). Select the documentation version that corresponds to your installed version.

- Software requirements: "Fortify ScanCentral SAST Client Software Requirements" in *Fortify Software System Requirements*
- Supported build tools: "Fortify ScanCentral SAST Sensor Languages and Build Tools" in *Fortify Software System Requirements*
- Command-line options: "Package Command Options" in *Fortify ScanCentral SAST Installation, Configuration, and Usage Guide*

Preparing .NET Application Files

For .NET implementations (.NET, .NET Core, .NET Framework, and Xamarin applications for Android and iOS), use one of the following methods to prepare your application files:

- ["Automated Code Packaging with Fortify ScanCentral SAST \(Recommended\)" below](#)
- ["Code Packaging with IDE Tools" below](#)
- ["Manual Code Packaging" on the next page](#)

Fortify Static Code Analyzer supports scanning .NET applications on Windows system only.

Important! Source code is scanned by default. Fortify strongly recommends providing source code, as this produces more accurate and comprehensive scan results. In addition, as the scanning process can result in false positives, auditors use the source code to manually review issues. If source code scanning is not an option, contact support to enable binary/compiled code scanning.

Automated Code Packaging with Fortify ScanCentral SAST (Recommended)

The Fortify ScanCentral SAST client automatically packages source code and all necessary dependencies in your MSBuild project.

To package a MSBuild project with the Fortify ScanCentral SAST client:

1. Download the Fortify ScanCentral SAST client from the Tools page.
2. Install the Fortify ScanCentral SAST client on the build machine. Installation instructions are available in the README.txt file stored in the zip file.
3. In a command-line interface, run `scancentral.bat` to package your MSBuild project. The basic syntax is: `scancentral package -bf <build_file> -o <output_zip>`. For example, `scancentral package -bf my.sln -o mypayload.zip`
For more information on using Fortify ScanCentral SAST, including additional command-line arguments, see ["Installing and Using the Fortify ScanCentral SAST Client" on the previous page](#).

Important! The MSBuild executable must be added to the PATH environment variable. Fortify recommends running the Fortify ScanCentral SAST client from the Visual Studio command prompt, which sets the required .NET variables automatically.

Note: Fortify ScanCentral SAST packaging is built in to the Fortify Extension for Visual Studio Code, Visual Studio Extension, Fortify Azure DevOps Extension, and Fortify on Demand Jenkins Plugin. For more information on using these tools, see ["Integrations and Tools" on page 337](#).

Code Packaging with IDE Tools

The IDE plugins enable selection of project files and necessary dependencies for packaging. For more information on using IDE tools, see ["IDE Tool" on page 338](#).

Manual Code Packaging

Manual code packaging consists of:

- Preparing source code files
- Preparing compiled files (for binary/compiled code)
- Creating a zip file containing the source code and compiled files

Preparing Source Code Files

Source code consists of all projects for the application. A complete project contains the following:

- All necessary source code files (C/C++, C#, or VB.NET)
- All required reference libraries
This includes those from relevant frameworks, NuGet packages, and third-party libraries.
- For C/C++ projects, include all necessary header files that do not belong to the Visual Studio or MSBuild installation.
- For ASP.NET and ASP.NET Core projects, include all the necessary ASP.NET page files
The supported ASP.NET page types are ASPX, ASCX, ASAX, ASHX, ASMX, AXML, Master, CSHtml, VBHTML, BAML, and XAML.

In addition, make sure to do the following tasks to help reduce undesirable scan results:

- Include only one copy of your dependencies that are targeted to your specified .NET version.
- Do not provide the `obj` and `bin/release` folders in order to avoid duplicate code in the payload.

Note: If you are working in the Visual Studio Developer Command Prompt, Fortify recommends that you run the `dotnet restore` command to make sure that all required reference libraries are downloaded and installed in the project. You must run this command from the top-level folder of the project.

Preparing Compiled Files (for binary/compiled code)

- Clean and compile the application in **full** debug mode. Scan results of compiled files only include file names and line numbers if there are matching PDB files. Matching binary and PDB files must be present in the same folder; a binary is excluded if the matching PDB file is not present.

Note: If you are including third party libraries in scan results, matching PDB files are required.

- Provide the debug build files, including all dependencies. Do not provide the `obj` and `bin/release` folders in order to avoid duplicate code in the payload.

Creating a Zip File

Package the source code and the debug build files in a zip file. Place the source code files in a separate root directory.

If the application contains Javascript, HTML, and/or XML components, simply include the JavaScript, HTML, and/or XML files in the payload to have them scanned.

Preparing Java Application Files

For Java applications, use one of the following methods to prepare your application files:

- ["Automated Code Packaging with Fortify ScanCentral SAST \(Recommended\)"](#) below
- ["Code Packaging with IDE Tools \(Recommended\)"](#) below
- ["Manual Code Packaging"](#) below

Important! Source code is scanned by default. Fortify strongly recommends providing source code, as this produces more accurate and comprehensive scan results. In addition, as the scanning process can result in false positives, auditors use the source code to manually review issues. If source code scanning is not an option, contact support to enable binary code scanning.

Automated Code Packaging with Fortify ScanCentral SAST (Recommended)

The Fortify ScanCentral SAST client automatically packages source code and all necessary dependencies in your Gradle or Maven project.

Note: Fortify ScanCentral SAST packaging is built in to the Fortify Extension for Visual Studio Code, Visual Studio Extension, Fortify Azure DevOps Extension, and Fortify on Demand Jenkins Plugin. For more information on using these tools, see ["Integrations and Tools" on page 337](#).

To package a Gradle or Maven project with the Fortify ScanCentral SAST client:

1. Download the Fortify ScanCentral SAST client from the Tools page.
2. Install the Fortify ScanCentral SAST client on the build machine. Installation instructions are available in the README.txt file stored in the zip file.
3. In a command-line interface, run `scancentral.bat` to package your Gradle or Maven project. The basic syntax is: `scancentral package -bf <build_file> -o <output_zip>`. For example, `scancentral package -bf pom.xml -o mypayload.zip`, `scancentral package -bf build.gradle -o mypayload.zip`
For more information on using Fortify ScanCentral SAST, including additional command-line arguments, see ["Installing and Using the Fortify ScanCentral SAST Client" on page 92](#).

Code Packaging with IDE Tools (Recommended)

The IDE plugins enable selection of project files and necessary dependencies for packaging. For more information on using IDE tools, see ["IDE Tool" on page 338](#).

Manual Code Packaging

Manual code packaging consists of:

- Preparing source code files
- Preparing compiled files
- Creating a zip file containing the source code and compiled files

Preparing Source Code Files

Provide the source code, along with any relevant Kotlin source code that is referenced by the Java application.

Preparing Compiled Files

- Compile the application in debug mode (for example, run `javac -g` if you are using the `javac` compiler). Scan results of compiled files only include file names and line numbers if debug information is provided.
- JSP files must be part of a WAR file. Do not precompile JSP files.
- Package the application as a JAR, WAR, or EAR file.
- Provide only one copy of shared files to avoid duplicate code in the payload.
- If source mode scanning will be used, provide just the dependencies from the compiled files to minimize duplicate issues in scan results. Dependencies are usually found in the `WEB-INF/lib` folders (WAR) and the `lib` or `APP-INF/lib` folders (EAR).
- If mixed mode scanning will be used, provide all the compiled files, including dependencies.

Creating a Zip File

Package the source code and compiled files in a zip file. You can include multiple JAR, WAR, and EAR files in the zip file. Do not include source code in JARs; place the source code files in a separate root directory.

If the application contains Javascript, HTML, and/or XML components, simply include the JavaScript, HTML, and/or XML files in the payload to have them scanned.

Preparing JavaScript Technology/HTML/XML Files

For applications that consist of JavaScript, TypeScript, HTML, and/or XML files, package the files in a zip file. Include all production dependencies. For example, run `npm install --only=prod` if you are using `npm`. Upload the zip file under the **JS/TS/HTML** technology stack option. For React Native mobile app projects, upload the zip file under the **React Native** option.

If applicable, make sure to do the following:

- Include the `package.json` file.
- Provide only TypeScript source code, not transpiled TypeScript. For example, do not provide the `dist` folder generated when building an Angular project.
- Do not include minified JavaScript files of your source code, as minified code significantly diminishes the quality of scan results.

For applications that are built with different languages or technology stacks and contain Javascript, HTML, and/or XML files, package the application according to the instructions provided for the language or technology stack and simply include the JavaScript, HTML, and/or XML files in the package. JS/TS/HTML is a catch-all option for simple web applications and web applications that primarily use JavaScript-related technologies.

Preparing Kotlin Application Files

For Kotlin applications, package the Kotlin source code files in a zip file, along with any relevant Java source code that is referenced by the Kotlin application. Include all dependencies; these are usually found in the WEB-INF/lib folders (WAR) and the lib or APP-INF/lib folders (EAR).

Important! Scanning of Kotlin source files is supported.

Preparing ABAP (SAP) Application Files

ABAP code needs to be extracted from the SAP database and prepared for scanning. The Fortify ABAP Extractor tool is provided for downloading source code files to the presentation server.

Importing the Transport Request

The Fortify ABAP Extractor is available on the Tools page in the portal (see ["Viewing and Downloading Tools" on page 347](#)). The Fortify ABAP Extractor zip file contains the following files:

- K900XXX.S9S (where the "XXX" is the release number)
- R900XXX.S9S (where the "XXX" is the release number)

These files make up the SAP transport request that you must import into your SAP system from outside your local Transport Domain. Have your SAP administrator or an individual authorized to install transport requests on the system import the transport request.

The NSP files contain a program, a transaction (YSCA), and the program user interface. After you import them into your system, you can extract your code from the SAP database.

Installation Note

The Fortify ABAP Extractor transport request was created on a system running SAP release 7.02, SP level 0006. If you are running a different SAP version and you get the transport request import error: `Install release does not match the current version`, then the transport request installation has failed.

To resolve this issue:

1. Re-run the transport request import.
The Import Transport Request dialog box opens.
2. Click the **Options** tab.
3. Select the **Ignore Invalid Component Version** check box.
4. Complete the import procedure.

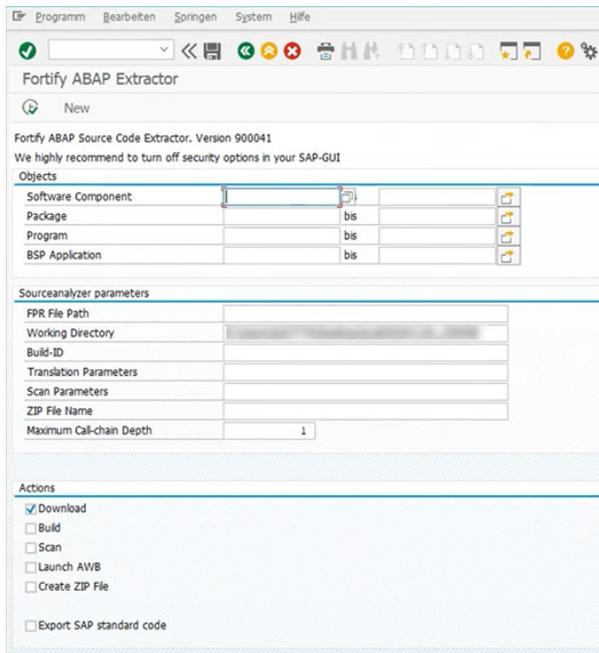

If this does not resolve the issue or if your system is running on an SAP version with a different table structure, Fortify recommends that you export your ABAP file structure using your own technology so that Fortify on Demand can scan the ABAP code.

Running the Fortify ABAP Extractor

You need to use an account with permission to download files to the local system and execute operating system commands.

To run the Fortify ABAP Extractor:

1. Start the program from the transaction code or manually start the Extractor object.

2. Provide the start and end name for the range of software components, packages, programs, or BSP applications that you want to scan.

Note: You can specify multiple objects or ranges.

3. Specify your preferences for extracting the source code. Fields are required unless otherwise noted.

Note: Certain fields do not apply to Fortify on Demand usage. Only applicable fields are listed.

Field	Description
Working Directory	Type or select the directory where you want to store the extracted source code .
ZIP File Name	(Optional) Type a ZIP file name if you want your output in a compressed package.

Field	Description
Maximum Call-chain Depth	A global SAP-function F is not downloaded unless F was explicitly selected or unless F can be reached through a chain of function calls that start in explicitly-selected code and whose length is this number or less. Fortify recommends that you do not specify a value greater than 2 unless directed to do so by support.

- Specify the actions to execute. Fields are required unless otherwise noted.

Note: Certain fields do not apply to Fortify on Demand usage. Only applicable fields are listed below.

Field	Description
Download	Select this check box to download the source code extracted from your SAP database.
Create ZIP file	(Optional) Select this check box to compress the output. You can also manually compress the output after the source code is extracted from your SAP database.
Export SAP standard code	(Optional) Select this check box to export SAP standard code in addition to custom code.

- Click **Execute**.

Fortify ABAP Extractor Notes

Because the Fortify ABAP Extractor program is executed online, you might receive a `max_dialog_work_process_time_reached` exception if the volume of source files selected for extraction exceeds the allowable process run time. To work around this, download large projects as a series of smaller Extractor tasks. For example, if your project consists of four different packages, download each package separately into the same project directory. If the exception occurs frequently, work with your SAP Basis administrator to increase the maximum time limit (`rdisp/max_wprun_time`).

When a PACKAGE is extracted from ABAP, the Fortify ABAP Extractor extracts everything from TDEVC with a `parentcl` field that matches the package name. It then recursively extracts everything else from TDEVC with a `parentcl` field equal to those already extracted from TDEVC. The field extracted from TDEVC is `devclass`.

The `devclass` values are treated as a set of program names and handled the same way as a program name, which you can provide.

Programs are extracted from TRDIR by comparing the name field with either:

- The program name specified in the selection screen
- The list of values extracted from TDEVC if a package was provided

The rows from TRDIR are those for which the name field has the given program name and the expression LIKEprogramname is used to extract rows.

This final list of names is used with READ REPORT to get code out of the SAP system. This method does read classes and methods out as well as merely REPORTs, for the record.

Each READ REPORT call produces a file in the temporary folder on the local system.

As source code is downloaded, the Fortify ABAP Extractor detects INCLUDE statements in the source. When found, it downloads the include targets to the local system.

Packaging ABAP Source Code

If you did not have Fortify ABAP Extractor compress the output, package the downloaded source code files in a zip file.

Preparing C and C++ Application Files

Fortify on Demand does not support direct scanning of C/C++ source code or their binaries. C/C++ code must be translated and packaged into an archive in your environment. This ensures consistency in translation regarding environmental variables and compilers used and alleviates the need for Fortify on Demand to reproduce your build environment. A translate-only version of Fortify Static Code Analyzer is provided for translating C/C++ code and packaging it for scanning.

Installing Fortify Static Code Analyzer

The latest version of Fortify Static Code Analyzer is available on the Tools page in the portal (see ["Viewing and Downloading Tools" on page 347](#)). You can download installers for Windows, macOS, and Linux operating systems. A valid license file is required to translate source code. Contact support to be issued a license, which will be available from the Tools page.

For installation and usage instructions, see the *OpenText™ Fortify Static Code Analyzer User Guide* at [Fortify Static Code Analyzer and Tools Documentation](#).

Translating Code

1. In a command-line interface, change the directory to your normal build directory.
2. Execute the following command:

```
sourceanalyzer -debug -verbose -logfile translate.log -b <build-id>  
touchless <build_command>
```

where <build_command> is your build script.

Example:

```
sourceanalyzer -debug -verbose -logfile translate.log -b my_proj  
touchless make all
```

3. Verify that the project builds correctly by checking the console output for completion and the `translate.log` for errors.

Packaging Translated Code

A Fortify Static Code Analyzer mobile build session (MBS) lets you translate a project on one machine and scan it on another. A mobile build session file (MBS file) includes all the files needed for the scan.

To generate and package an MBS file:

1. On the machine where the translation was done, issue the following command to generate a mobile build session:

```
sourceanalyzer -b <build-id> -export-build-session <file.mbs>
```

where `<file.mbs>` is the file name you provide for the mobile build session.
2. Package the MBS file in the root of a zip file. Do not include other files (including additional MBS files) or directories; this might cause the scan to be cancelled.
3. Upload the zip file to Fortify on Demand under the **MBS/C/C++** technology stack option.

For more information about using Fortify Static Code Analyzer, see the *Micro Focus Fortify Static Code Analyzer User Guide* at [Fortify Static Code Analyzer and Tools Documentation](#).

Preparing Classic ASP, VBScript, and Visual Basic Application Files

For Classic ASP, VBScript, and Visual Basic (VB6) applications, package the source code files in one zip file.

Preparing Dart and Flutter Application Files

Package the source code files in a zip file. Include all dependencies.

Download the dependencies by running one of the following commands:

- For Flutter projects, use `flutter pub get`.
- For Dart-only projects, use `dart pub get`.

For example, to download the dependencies for a Flutter project that has the project root `myproject`, run the following commands:

```
cd myproject  
flutter pub get
```

Important! If the project includes nested packages with different `pubspec.yaml` files, you must run `dart pub get` or `flutter pub get` for each package root.

Important! Make sure that the following are included in the project directory:

- The `pubspec.yaml` file, which specifies the dependencies
- The `.dart_tool` directory, which includes the `package_config.json` file automatically generated by the pub tool

Preparing COBOL Application Files

For COBOL applications, package the COBOL source code, the copybook files that the COBOL source code uses, and the SQL INCLUDE files that the COBOL source code references in one zip file.

Copybook and SQL INCLUDE files must retain the names used in the COBOL source code COPY statements.

Do not include copybook or SQL INCLUDE files in the directory or the subdirectory where the COBOL sources reside. Fortify recommends that you place your COBOL source code in a folder called `sources/` and your copybooks in a folder called `copybooks/`. Place these folders at the same level.

Zip file

- `sources/` folder
- `copybooks/` folder

Preparing ColdFusion Markup Language (CFML) Application Files

For CFML applications, package the source code files in one zip file.

Preparing Dockerfiles and Infrastructure as Code (IaC) Files

Infrastructure as Code (IaC) configuration files and Dockerfiles can be submitted as stand-alone payloads. Package the files in a zip file and submit it under the **Infrastructure-As-Code/Dockerfile** technology stack.

For containerized applications, package the application according to the instructions provided for the application's language or technology stack and include the Dockerfile in the package.

Note:

Fortify Static Code Analyzer translates the following files as Dockerfiles: `Dockerfile`, `dockerfile`, `*.Dockerfile`, and `*.dockerfile`.

Fortify Static Code Analyzer accepts the following escape characters in Dockerfiles: backslash (`\`) and backquote (```). If the escape character is not set in the Dockerfile, then Fortify Static Code Analyzer assumes that the backslash is the escape character.

Preparing Go Application Files

For Go applications, use one of the following methods to prepare your application files:

- ["Automated Code Packaging with Fortify ScanCentral SAST \(Recommended\)" on the next page](#)
- ["Code Packaging with IDE Tools" on the next page](#)
- ["Manual Code Packaging" on the next page](#)

Automated Code Packaging with Fortify ScanCentral SAST (Recommended)

The Fortify ScanCentral SAST client automatically packages source code and all necessary dependencies in your Go project.

To package a Go project with the Fortify ScanCentral SAST client:

1. Download the Fortify ScanCentral SAST client from the Tools page.
2. Install the Fortify ScanCentral SAST client on the build machine. Installation instructions are available in the README.txt file stored in the zip file.
3. In a command-line interface, run `scancentral.bat` to package your Go project. The basic syntax is: `scancentral package -o <output_zip>`. For example, `scancentral package -o mypayload.zip`
For more information on using Fortify ScanCentral SAST, including additional command-line arguments, see ["Installing and Using the Fortify ScanCentral SAST Client" on page 92](#).

Note: Fortify ScanCentral SAST packaging is built in to the Fortify Extension for Visual Studio Code, Visual Studio Extension, Fortify Azure DevOps Extension, and Fortify on Demand Jenkins Plugin. For more information on using these tools, see ["Integrations and Tools" on page 337](#).

Code Packaging with IDE Tools

The IDE plugins enable selection of project files and necessary dependencies for packaging. For more information on using IDE tools, see ["IDE Tool" on page 338](#).

Manual Code Packaging

Package the Go source code files in a zip file. Include dependencies that are not in the standard Go library. Make sure that these dependencies are in the Vendor folder.

The following dependency management systems built into Go are supported:

- Go modules (recommended)
If your project uses Go modules, the project files (including the `go.mod` file) must be in the root of the zip file. Do not place the project files inside nested directories.
- GOPATH (deprecated in Go 1.13)

Note: The following entities are excluded from scanning:

- Vendor folder
- All projects defined by any `go.mod` files in subfolders
- All files with the `_test.go` suffix (unit tests)

Preparing PHP Application Files

For PHP applications, use one of the following methods to prepare your application files:

- ["Automated Code Packaging with Fortify ScanCentral SAST \(Recommended\)" below](#)
- ["Code Packaging with IDE Tools" below](#)
- ["Manual Code Packaging" below](#)

Automated Code Packaging with Fortify ScanCentral SAST (Recommended)

The Fortify ScanCentral SAST client automatically packages source code and all necessary dependencies in your PHP project.

To package a PHP project with the Fortify ScanCentral SAST client:

1. Download the Fortify ScanCentral SAST client from the Tools page.
2. Install the Fortify ScanCentral SAST client on the build machine. Installation instructions are available in the README.txt file stored in the zip file.
3. In a command-line interface, run `scancentral.bat` to package your PHP project. The basic syntax is: `scancentral package -hv <version> -o <output_zip>`. For example, `scancentral package -hv 7.1 -o mypayload.zip`
For more information on using Fortify ScanCentral SAST, including additional command-line arguments, see ["Installing and Using the Fortify ScanCentral SAST Client" on page 92](#).

Note: Fortify ScanCentral SAST packaging is built in to the Fortify Extension for Visual Studio Code, Visual Studio Extension, Fortify Azure DevOps Extension, and Fortify on Demand Jenkins Plugin. For more information on using these tools, see ["Integrations and Tools" on page 337](#).

Code Packaging with IDE Tools

The IDE plugins enable selection of project files and necessary dependencies for packaging. For more information on using IDE tools, see ["IDE Tool" on page 338](#).

Manual Code Packaging

Package the source code files in one zip file. Make sure to include the `php.ini` file with the package. This file helps to identify where dependencies reside.

Preparing Python Application Files

For Python applications, use one of the following methods to prepare your application files:

- ["Automated Code Packaging with Fortify ScanCentral SAST \(Recommended\)" on the next page](#)

Important! Python microservices must be packaged using the Fortify ScanCentral SAST client

- ["Code Packaging with IDE Tools" on the next page](#)
- ["Manual Code Packaging" on the next page](#)

Automated Code Packaging with Fortify ScanCentral SAST (Recommended)

The Fortify ScanCentral SAST client automatically packages source code and all necessary dependencies in your Python project.

To package a Python project with the Fortify ScanCentral SAST client:

1. Download the Fortify ScanCentral SAST client from the Tools page.
2. Install the Fortify ScanCentral SAST client on the build machine. Installation instructions are available in the README.txt file stored in the zip file.
3. In a command-line interface, run `scancentral.bat` to package your Python project. The basic syntax is: `scancentral package -o <output_zip>`. For example, `scancentral package -o mypayload.zip`
For more information on using Fortify ScanCentral SAST, including additional command-line arguments, see ["Installing and Using the Fortify ScanCentral SAST Client" on page 92](#).

Note: Fortify ScanCentral SAST packaging is built in to the Fortify Extension for Visual Studio Code, Visual Studio Extension, Fortify Azure DevOps Extension, and Fortify on Demand Jenkins Plugin. For more information on using these tools, see ["Integrations and Tools" on page 337](#).

Code Packaging with IDE Tools

The IDE plugins enable selection of project files and necessary dependencies for packaging. For more information on using IDE tools, see ["IDE Tool" on page 338](#).

Manual Code Packaging

Package the source code files in one zip file. Include all standard and third-party modules and packages; these are found in the `lib` folder of the Python virtual environment (provide at a minimum the `site-packages` folder). Fortify on Demand does not support PYC files (compiled Python files).

Note: If your application uses a version of Python not listed in ["Supported Languages" on page 82](#), contact support to discuss your options.

Preparing Ruby Application Files

For applications created in Ruby, package the entire application as it would be deployed and all source code files in one zip file .

Preparing Solidity Application Files

Package the source code files in a zip file. Include all dependencies.

Fortify Static Code Analyzer downloads compilers that are referenced in the code with the pragma statement from the Solidity compiler repository. If a file does not contain a pragma statement, then the default of ^0.8.0 is used.

Preparing Salesforce (Apex and Visualforce) Application Files

To prepare Salesforce (Apex and Visualforce) applications:

- Use the Ant Migration Tool available on the Salesforce website to download your application to your local computer from your Salesforce organization (org) where you develop and deploy it. Make sure that the project manifest files are set up correctly for the specified target in your `build.xml` file.
- The downloaded version of your application contains:
 - Apex classes in files with the `.cls` extension
 - Visualforce web pages in files with the `.page` extension
 - Apex code files called database “trigger” functions in files with the `.trigger` extension
 - Visualforce component files with the `.component` extension
 - Objects with the `.object` extension
- Configure the retrieve targets using the Ant Migration Tool documentation. If your organization uses any apps from the app exchange, make sure that these are downloaded as packaged targets.
- Package the source code files in one zip file.

Preparing Scala Application Files

Scala code must be translated and packaged into an archive in your environment. The Fortify Scala plugin and a translate-only version of Fortify Static Code Analyzer are available for translating Scala and packaging its code for scanning.

Installing Fortify Static Code Analyzer

The latest version of Fortify Static Code Analyzer is available on the Tools page in the portal (see ["Viewing and Downloading Tools" on page 347](#)). You can download installers for Windows, macOS, and Linux operating systems. A valid license file is required to translate source code. Contact support to be issued a license, which will be available from the Tools page.

For installation and usage instructions, see the *OpenText™ Fortify Static Code Analyzer User Guide* at [Fortify Static Code Analyzer and Tools Documentation](#).

Translating Code

To translate Scala code, you must have the following: a standard Lightbend Enterprise Suite license and the Fortify Scala plugin from Lightbend. Contact Fortify on Demand support to obtain a license key. For instructions on downloading the plugin and translating Scala code, see the Lightbend documentation at <https://developer.lightbend.com/guides/fortify/>.

Important! If your application contains source code in a language other than Scala, submit the other source code in a separate assessment.

Packaging Translated Code

A Fortify Static Code Analyzer mobile build session (MBS) lets you translate a project on one machine and scan it on another. A mobile build session file (MBS file) includes all the files needed for the scan.

To generate and package an MBS file:

1. On the machine where the translation was done, execute the following command to generate a mobile build session:

```
sourceanalyzer -b <build-id> -export-build-session <file.mbs>
```

where *<file.mbs>* is the file name you provide for the mobile build session.
2. Package the MBS file in the root of a zip file. Do not include other files (including additional MBS files) or directories; this will cause the scan to be cancelled.
3. Upload the zip file to Fortify on Demand under the **MBS/C/C++/Scala** technology stack option.

For more information about using Fortify Static Code Analyzer, see the *Micro Focus Fortify Static Code Analyzer User Guide* at [Fortify Static Code Analyzer and Tools Documentation](#).

Preparing Android Application Files (Source Code)

For Android applications, package the Java or Kotlin source code files in one zip file. Include all dependencies that are required to build the Android code in the application project.

Note: Fortify Static Code Analyzer supports Xamarin. For instructions on preparing Xamarin application files, see "[Preparing .NET Application Files](#)" on page 93. Other third-party development libraries such as Cordova, Ionic Framework, PhoneGap, and Unity are not supported.

Related Topics:

For information on preparing Android binary files for mobile assessments, see "[Preparing Android Application Files \(Binary\)](#)" on page 155.

Preparing iOS Application Files (Source Code)

For iOS applications, prepare the source code files according to the following instructions:

- Applications must be buildable using xcodebuild from the command line.
- Make sure that any dependencies required to build the project are present in the payload and not accessed through dependency managers like a password-protected GitHub. The payload needs to be buildable in isolation.
- Remove any developer or environment-specific settings from your application
- If your project includes property list files in binary format, you must first convert them to XML format. You can do this with the Xcode `plutil` command.
- Make sure that the headers for third-party libraries are available.
- Objective-C++ projects must use the non-fragile Objective-C runtime (ABI version 2 or 3).

Package the source code files in one zip file.

Note: Fortify Static Code Analyzer supports Xamarin. For instructions on preparing Xamarin application files, see ["Preparing .NET Application Files" on page 93](#). Other third-party development libraries such as Cordova, Ionic Framework, PhoneGap, and Unity are not supported.

Related Topics:

For information on preparing iOS binary files for mobile assessments, see ["Preparing iOS Application Files \(Binary\)" on page 156](#)

Configuring a Static Scan

After preparing your application files for a static assessment, you need to configure the static scan settings. You only need to configure the static scan settings once per release as your settings are carried over to the next scan. You can edit settings as needed for subsequent assessments.

To configure a static scan:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application.
The Application Overview page appears.

The screenshot shows the Fortify Static Code Analyzer interface for the application 'WebGoat (.NET)'. The 'Issues In Production' section displays a bar chart with four categories: CRITICAL (135), HIGH (151), MEDIUM (11), and LOW (74). The 'Policy Compliance' section shows a 'FAIL' status with a star rating of one star. The 'Releases' section shows a table with one release, 'START SCAN', version 5.4, in 'Production' status, with a 'FAIL' policy compliance and the same issue counts as above. A 'START SCAN' button is visible in the table.

3. Click **Start Scan** for the release that you want to have assessed and select **Static**.

The screenshot shows the 'Static Scan Setup' page. A dropdown menu is open, showing three options: 'Static', 'Open Source', and 'Dynamic'. The 'Static' option is selected. Below the dropdown, the 'START SCAN' button is visible, and the release name '5.4' is displayed.

The Static Scan Setup page appears.

4. Complete the fields as needed.

Field	Required	Description
Assessment Type	Yes	Select the assessment type. Only assessment types allowed by the organization's security policy are displayed. The SLO of the selected assessment type appears below the field.
Entitlement	Yes	Select the entitlement that the assessment will use. The field displays entitlements that are valid for the selected assessment type, including those available for purchase. Note that microservice applications are restricted to subscriptions. If the release has an active subscription, only options that do not consume entitlements are displayed. Note: If you select an entitlement offered through a Dynamic Premium or Mobile Premium assessment, the assessment is activated and the full cost of the entitlement is deducted.
Audit Preference	Yes	Select the audit preference. <ul style="list-style-type: none"> Manual: False positives identified by Fortify Audit Assistant with high confidence are automatically suppressed. A security expert then manually reviews the scan results.

Field	Required	Description
		<ul style="list-style-type: none"> • Automated: False positives identified by Fortify Audit Assistant with high confidence are automatically suppressed and results are published without manual review. <p>Note: Fortify Audit Assistant is only applied to new issues found in a scan.</p> <p>The ability to select audit preference depends on the assessment type:</p> <ul style="list-style-type: none"> • A Static single scan allows Automated only. • A Static subscription allows one Manual audit per application (not per release or microservice). • A Static+ single scan allows Manual only. • A Static+ subscription allows Automated or Manual audit for each assessment.
Fortify Aviator	No	<p>For scans using Automated audit, select the check box to have Fortify Aviator audit results and provide enhanced remediation assistance. Supported technology stacks and vulnerability categories are subject to change as Fortify Aviator continues to be updated. For more information, see "Audit and Remediation with Fortify Aviator" on page 208.</p> <p>This service consumes 1 additional assessment unit. No entitlement is deducted if the Fortify Aviator service is not performed.</p>
Software Composition Analysis	No	<p>Select the check box to include open source software composition analysis. No code leaves the Fortify on Demand environment. For more information on adding software composition analysis as part of a static scan, see "Open Source Software Composition Analysis" on page 116.</p>

- If needed, you can configure additional scan settings in the sections appearing below the required fields.

Click **Advanced Settings** and complete the fields as needed.

Field	Description
Technology Stack	Select the application's technology stack. The languages available for selection depends on the application type (web/thick client or mobile) and whether the application is a microservice application. If the auto detect feature is enabled, selecting Auto Detect has Fortify on Demand determine the technology stack based on the payload content.
Language Level	If applicable, select the technology stack's language level from the list.

Click **Legacy Settings** and complete the field as needed.

Field	Description	Deprecation Note
Build Server Integration	Once the static scan settings (assessment type, technology stack, language level, audit preference, software composition analysis) have been configured, a token is automatically populated in the Build Server Integration field. The token can be used to submit a static assessment using external tools. Note: The BSI token is persistent across assessments of a release.	The release ID replaces the BSI token. Migrate build configurations to the release ID at the earliest convenience.
Source Control	Select the method of uploading the payload. <ul style="list-style-type: none"> Manual Upload (default): Manually upload the payload from your local system. Source Control: Upload the payload from a version control platform. This option is available if source control has been configured. For more information, see "Source Control Integration" on page 365. 	This feature is planned to be deprecated. You should migrate legacy source control integrations to pipelines on the applicable version control platforms at the earliest convenience. For more information, see " CICD Tools " on page 337 .

Field	Description	Deprecation Note
Scan Binary	<p>Note: Contact support to enable the option.</p> <p>(Java/J2EE/Kotlin,.NET, and .NET Core technology stacks) Select the check box to have compiled and source code files scanned. Scanning binary files is not supported for Fortify ScanCentral SAST-packaged payloads.</p> <p>Note: If the source code inclusion requirement is enabled and this option is not selected, the scan will be cancelled if the payload does not contain source code.</p>	

6. Click **DevOps & IDE integration** to view the release ID. The release ID can be used to submit a static scan using CI/CD tools. The release ID serves as a token that retrieves the most recently saved scan settings in the portal.
7. Click **Save**.
Your static scan settings are saved.
8. If you have the Consume Entitlements permission and selected a subscription entitlement, click **Start Subscription** to start the static assessment subscription and consume the entitlement immediately. The assessment cost is deducted from the entitlement when a user starts the initial scan.

Note: Contact support to enable the option.

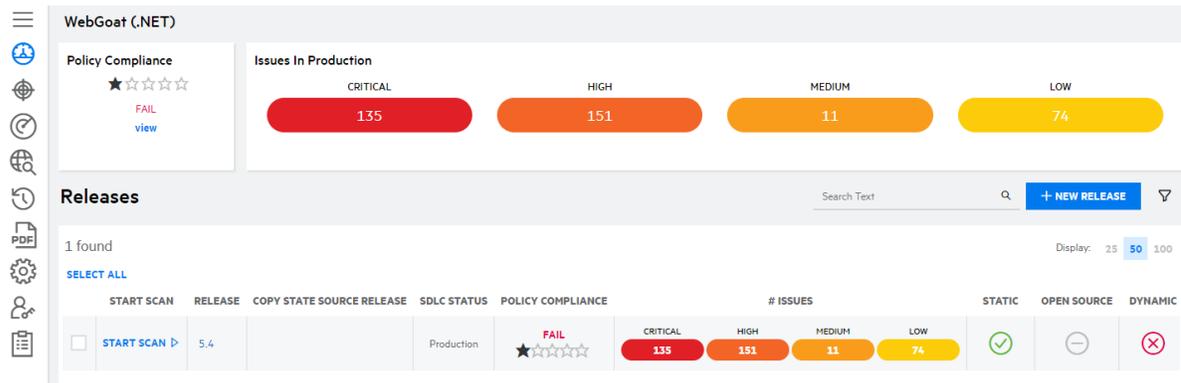

Uploading a Static Assessment Payload Through the Portal

Once you have packaged the application files and configured the static scan settings, upload the payload for scanning. The maximum payload size limit is 5 GB; web browsers have their own maximum size limits (see your browser documentation for details). As portal timeouts can occur when uploading large files, Fortify recommends uploading through the portal only if the file size is less than 500 MB. If you have difficulties uploading through the portal, see ["Related Topics" on page 114](#) for alternative methods of uploading your files. You can also contact support to discuss the most appropriate upload option.

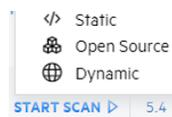

You can submit multiple scans for an application, including those for the same release. An application can have one in progress static scan at a time. Additional scans are queued and then scanned in the order in which they were queued. Each application can have up to 30 scans in the queue.

To upload a static assessment payload through the portal:

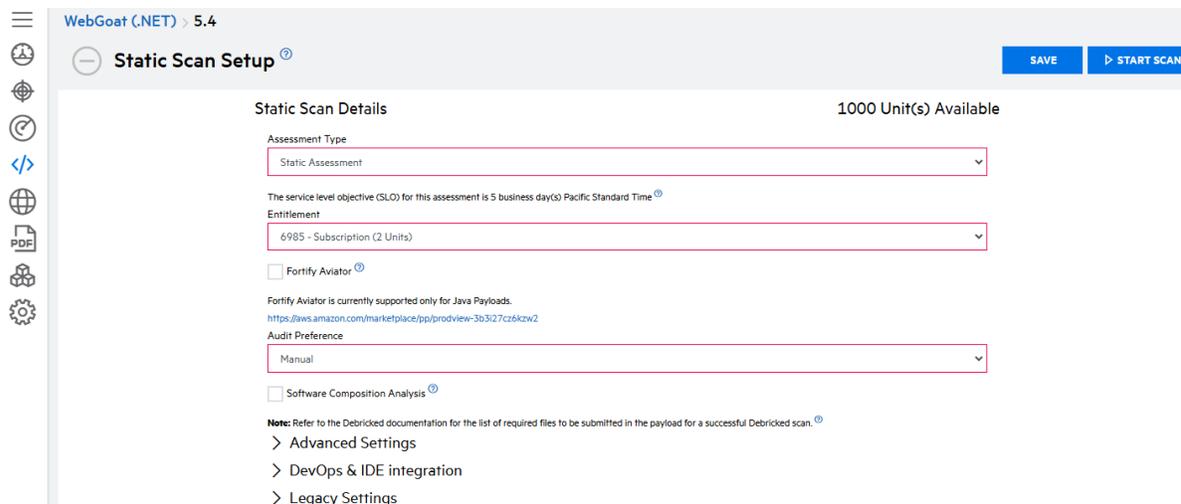

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application.
The Application Overview page appears.

3. Click **Start Scan** for the release that you want to have assessed and select **Static** from the menu.

The Static Scan Setup page appears.

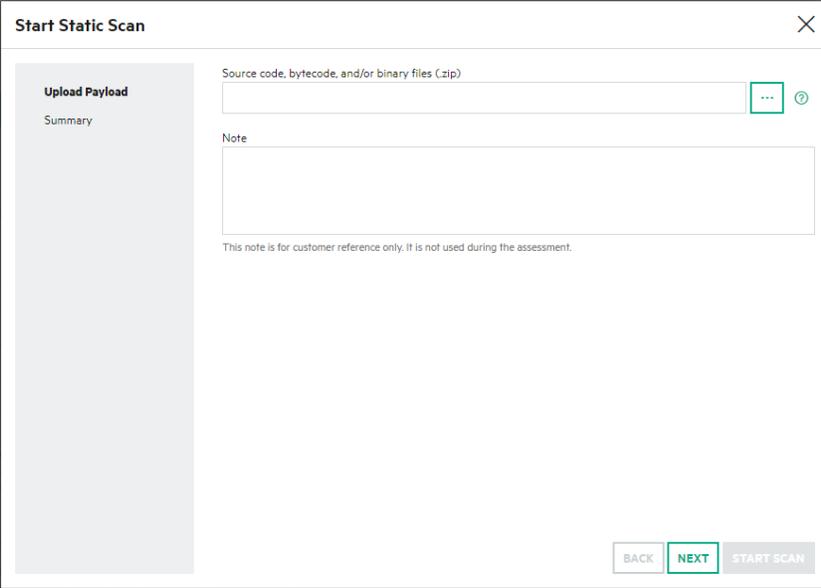

4. Click **Start Scan**.

Note: If the application has an active static scan, you are blocked from starting another scan.

The Start Static Scan window opens.

5. Perform the relevant task based on your method of upload:

Method of Upload	Procedure
Manual upload	 <p>a. Click</p> <p>b. Navigate to and select your zip file.</p>
Source Control	 <p>a. Select Branch or Release from the Source Location list.</p> <p>b. Select the specific branch or release.</p>

6. In the **Note** field, type a description of the application.
7. Click **Next**.
A summary of the static scan setup values appears.
8. Review the summary. If necessary, click **Back** and make any corrections. If the values are correct, click **Start Scan**.
Once the upload of the zip file is complete, you are redirected to the Release Scans page; your new scan status is **Queued**. The scan will begin once it moves to the front of the queue.

Related Topics

In addition to using the portal, you can submit a static assessment using the following methods:

- IDE plugin tools: Visual Studio Extension, Eclipse Plugin, IntelliJ Plugin, Fortify Extension for Visual Studio Code. For more information, see ["IDE Tool" on page 338](#).

- Build server integration tools: FoDUploader, Fortify Azure DevOps Extension, Fortify on Demand Jenkins Plugin. For more information, see ["CICD Tool" on page 337](#).
- Fortify on Demand API. For more information, see ["Fortify on Demand API" on page 324](#).

Static Assessment Payload Validation

After the payload has been uploaded, Fortify on Demand performs the following payload validation checks to ensure that the requirements have been met for the static testing team to start a static assessment:

- The zip file is valid and not corrupt.
- The payload contains file extensions that are supported by Fortify Static Code Analyzer. Supported file extensions are: ABAP, abap, appxmanifest, as, asax, ascx, ashx, asmx, asp, aspx, baml, bas, bicep, BSP, bsp, cbl, cfc, cfm, cfml, class, cls, cob, conf, Config, config, cpx, cs, cscfg, csdef, cshtml, ctl, ctp, dart, dll, Dockerfile, dockerfile, erb, exe, frm, go, hcl, htm, html, inc, ini, jar, java, jmod, js, jsff, json, jsp, jspf, jsp, jsx, kt, kts, Master, master, mbs, mxml, page, php, phtml, pkb, pkh, pks, plist, properties, py, razor, rb, scala, settings, sol, sql, swift, tag, tagx, tf, tld, trigger, ts, tsx, vb, vbhtml, vbs, vbscript, wadcfg, wadcfgx, winmd, wsdd, wsdl, xaml, xcfg, xhtml, xmi, xml, xsd, yaml, yml.
- For .NET applications, the payload contains .dll or .exe files.
- For Java and Kotlin applications, the payload contains .class, .java, .jar, .jsp, .kt, .ktm, or .kts files.
- A Fortify ScanCentral SAST-packaged payload does not have the **Scan Binary** scan setting enabled.
- For Python microservice applications, the payload is packaged using the Fortify ScanCentral SAST client.
- For technology stacks that require a mobile build session (MBS) file to be submitted, the payload contains only one .mbs file.
- For tenants that have enabled the source code inclusion requirement, the payload contains files in the following file formats:

Technology Stack	Source File Extension
.NET	.cs, .vb
ABAP	.abap
ASP	.asp
CFML	.cfm, .cfml, .cfc
COBOL	.cbl, .cob, .ccp, .cb2
Dockerfile/Infrastructure as Code	.dockerfile, .json, .xml, .tf, .yaml, dockerfile
Go	.go

JAVA/J2EE/Kotlin	.java, .kt, .ktm, .kts
JS/TS/HTML	.xsd, .xmi, .wsdd, .config, .cpx, .xcfg, .js, .ts
PHP	.php
PYTHON	.py
VB6	.vbs, .bas, .frm, .ctl, .cls
VBScript	.vbscript
Ruby	.rb

If any of the requirements is not met, the scan is automatically canceled and an email indicating the cancellation reason is sent. Upon acceptance of the file, the code is transferred to a secure server and analyzed.

Open Source Software Composition Analysis

Fortify on Demand offers open source software composition analysis in conjunction with static assessments or as a separate assessment. Applications are scanned using one of the following software composition analysis tools:

- Debricked (offered with static assessments and as a separate assessment)
- Sonatype (offered with static assessments, not available for purchase)

The following languages are supported: C# (.NET), Go, Java, JavaScript, Kotlin, Objective-C, PHP, Python, Ruby, and Swift.

To enable open source software composition analysis, purchase Debricked entitlements through Fortify on Demand. An entitlement is redeemed for a Debricked subscription per application. While the static scan is in progress, the software composition analysis tool checks for open source components in the payload. Open source scan results identify direct and transitive dependencies along with associated security issues and licenses

If you are interested in purchasing Debricked entitlements, contact your sales representative.

This section contains the following topics:

Preparing Open Source Assessment Files	117
Uploading an Open Source Assessment Payload Through the Portal	120
Viewing Open Source Components in a Release	121
Viewing Open Source Components in a Tenant	122
Sonatype Integration End of Life	123

Preparing Open Source Assessment Files

For open source scanning, the files that are required in the payload depend on the software composition analysis tool that is being used.

Debricked File Requirements for Lock File Analysis

To reliably detect dependencies, Debricked uses one of the following approaches depending on the build system or package manager:

- Some package managers use a lock file to describe dependencies in a project (such as npm). Package managers usually automatically generate lock files. Debricked supports scanning dependencies using native lock files.
- For build systems or package managers or build systems that don't use a lock file (such as Maven and Gradle), Debricked requires a file describing the resolved dependency tree to be generated using the functionality of the build system or package manager. This file is referred to as a Debricked lock file.

You can use one of the following methods to generate both native lock files and Debricked lock files:

- (Recommended) Use the Fortify ScanCentral SAST client (22.1.2 or later) to generate the lock files along with the application files. Add the `-oss` option to the package command to invoke the Debricked CLI and add the lock files to the package. Note that package generation is not dependent on successfully packaging the lock files.
- (Recommended) Run the Debricked CLI to generate the lock files independently of the application files. For installation and usage instructions, see [README.FoD.md](#).
- Manually generate the lock files.

Tip: If you are manually generating Debricked lock files, automate this process by adding the appropriate command to your CI/CD pipeline.

The following table describes the file requirements for Debricked scanning in Fortify on Demand.

Important! A Debricked scan is canceled if the required lock file is not present in the payload.

Language	Package Manager	Required File	Notes (if not using the Fortify ScanCentral SAST client)
C#	NuGet	<code>packages.lock.json</code>	Use one of the following methods to generate the lock file: <ul style="list-style-type: none">• Run <code>debricked resolve</code> from the Debricked CLI. For more information, see C# - Nuget, Paket.

Language	Package Manager	Required File	Notes (if not using the Fortify ScanCentral SAST client)
			<ul style="list-style-type: none"> Run <code>dotnet restore --use-lock-file</code> from the .NET CLI. For more information, see Enable repeatable package restore using lock file. Set the MSBuild property <code>RestorePackagesWithLockFile</code> to <code>true</code> in the <code>.csproj</code> project file and run the Nuget restore command. For more information, see Enable repeatable package restore using lock file.
	Paket	<code>paket.lock</code>	<code>paket.lock</code> is automatically generated by Paket.
Go	Go Dep	<code>gopkg.lock</code>	<p><code>gopkg.lock</code> is automatically generated by dep.</p> <p>Note: Go Dep updates will not be made as Go Dep is deprecated.</p>
	Go modules	<code>gomod.debricked.lock</code>	For instructions on generating the resolved dependency tree file, see Go - Go Modules, Go Dep, Bazel .
Java/Kotlin	Bazel	WORKSPACE	WORKSPACE is automatically generated by Bazel.
		(Recommended) <code>maven_install.json</code>	Use <code>rules_jvm_external</code> to generate <code>maven_install.json</code> , where all dependencies are pinned to their respective versions. For more information, see A repository rule for calculating transitive Maven dependencies .
	Gradle	<code>gradle.debricked.lock</code>	For instructions on generating the resolved dependency tree file, see

Language	Package Manager	Required File	Notes (if not using the Fortify ScanCentral SAST client)
			Java & Kotlin - Gradle, Maven and Bazel.
	Maven	maven.debricked.lock	For instructions on generating the resolved dependency tree file, see Java & Kotlin - Gradle, Maven and Bazel.
JavaScript	Bower	bower.debricked.lock	For instructions on generating the resolved dependency tree file, see JavaScript - NPM, Yarn, Bower.
	npm	package-lock.json	The npm install command automatically generates package-lock.json unless disabled in a .npmrc file. The npm install --package-lock-only command generates package-lock.json without checking node_modules and downloading dependencies.
	Yarn	yarn.lock	yarn.lock is automatically generated by Yarn.
Objective-C	Cocoapods	podfile.lock	podfile.lock is automatically generated by Cocoapods.
PHP	Composer	composer.lock	composer.lock is automatically generated by Composer.
Python	pip	<file_name> .pip.debricked.lock	For instructions on generating the resolved dependency tree file, see Python - Pip, Pipenv.
	Pipenv	Pipfile.lock	Pipfile.lock is automatically generated by Pipenv based upon the virtual environment for the project.
Ruby	RubyGems	Gemfile.lock	Gemfile.lock is automatically generated by RubyGems.

Language	Package Manager	Required File	Notes (if not using the Fortify ScanCentral SAST client)
Swift	Cocoapods	podfile.lock	podfile.lock is automatically generated by Cocoapods.

In keeping with industry best practices, you should commit lock files to the source control repository. This simplifies the process of preparing application files, especially if you are not using the Fortify ScanCentral SAST client to package the payload.

Debricked File Requirements for Fingerprint Analysis

Debricked supports scanning for unmanaged dependencies not defined in manifest files by examining fingerprints of the application files (including binary files). Currently C# (.NET), Java, and Python are supported. Debricked requires the `debricked.fingerprints.txt` file, which is automatically generated by Fortify on Demand when submitting a Debricked scan. A Debricked scan includes both fingerprint analysis and lock file analysis.

For more information on Debricked file fingerprinting, see <https://docs.debricked.com/tools-and-integrations/cli/debricked-cli/file-fingerprinting>.

Sonatype File Requirements

For information on the file requirements for Sonatype scans, see <https://help.sonatype.com/iqserver/analysis>.

Uploading an Open Source Assessment Payload Through the Portal

The method of uploading an open source payload depends on whether the open source assessment is included with the static assessment or is run separately:

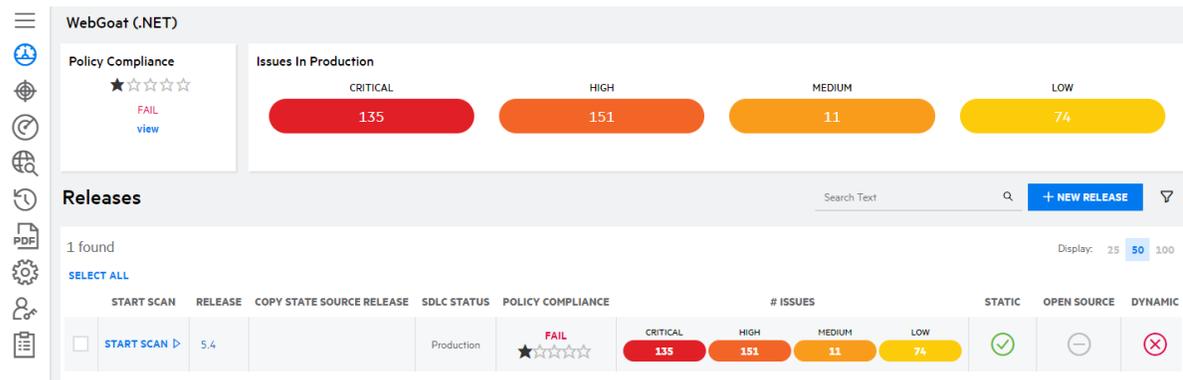

- Configure your static scan settings to include an open source scan and include the files required for open source scanning in your static assessment payload. This method is available for both Debricked and Sonatype. For more information, see ["Configuring a Static Scan" on page 108](#).
- Upload a native or Debricked lock file and submit a Debricked-only scan. The following instructions describe how to submit a Debricked-only scan for a lock file.

Note: You can submit a Debricked-only scan on third-party software bill of materials. For more information, see ["Importing a Software Bill of Materials" on page 358](#).

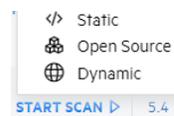

To scan:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application.

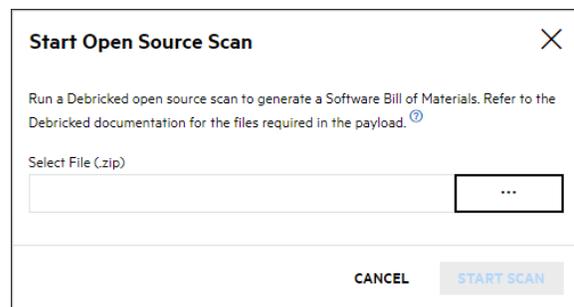

The Application Overview page appears.

3. Click **Start Scan** for the release that you want to have assessed and select **Open Source**.

The Open Source Scan window appears.

4. Click
5. Navigate to and select your zip file containing the lock file. The zip file can contain either the static assessment payload or just the lock file.
6. Click **Start Scan**.
Once the upload of the zip file is complete, you are redirected to the Release Scans page; your new scan status is **Queued**. The scan will begin once it moves to the front of the queue.

Viewing Open Source Components in a Release

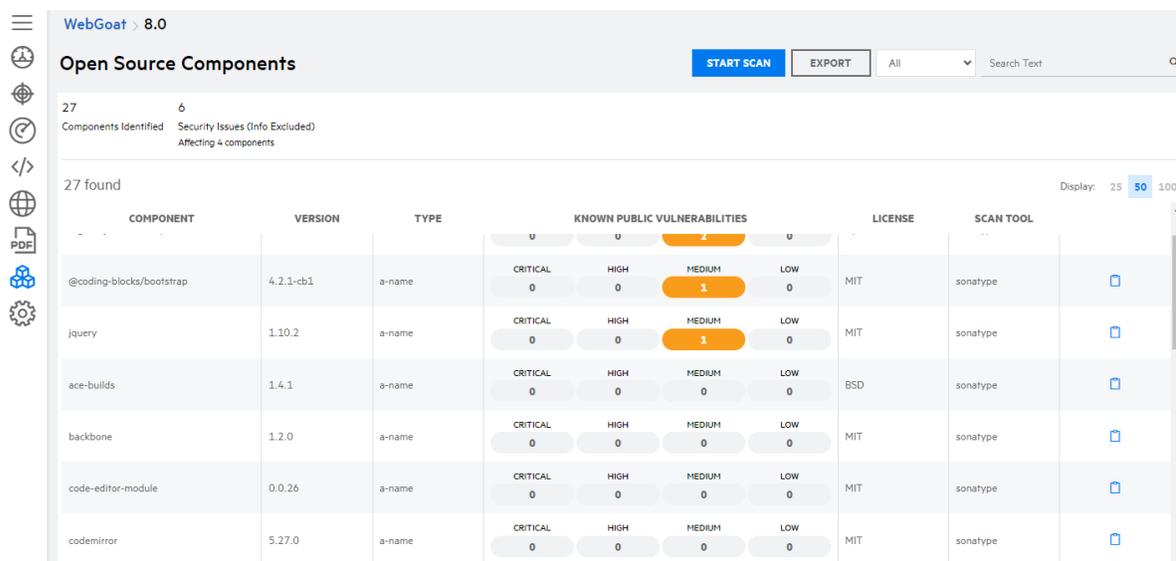

You can view open source components found in the most recent scan for a release.

To view open source components for a release:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears.

3. Click **Open Source Components**.

The Open Source Components page appears.

4. If results from multiple scan tools are available, select the source whose results you want to view from the drop-down list.

The page refreshes with results from the selected source.

The following table describes how to navigate the Open Source Components page.

Task	Action
Export the open source component list	Click Export . A link to download a CSV file is sent to the email address specified in your account settings. The link is valid for 7 days from the time the email is sent.
View results from specific scan tool	Select the scan tool results you want to view from the drop-down list.
Search the open source component list	Type a keyword or phrase in the search text field and press Enter .
View issues filtered by package URL	Click the issue counts in each component row.

Viewing Open Source Components in a Tenant

Users with the **View Third Party Apps** permission can view a tenant-wide summary of all identified open source components and the applications utilizing them.

To view open source components across a tenant:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Open Source Components**.
The Open Source Components page appears.

COMPONENT	PACKAGE URL	VERSION	TYPE	KNOWN PUBLIC VULNERABILITIES				LICENSE	RELEASES
				CRITICAL	HIGH	MEDIUM	LOW		
jquery		2.2.4	a-name	0	0	2	0	MIT	1 VIEW RELEASES
org.webjars.bootstrap		3.1.1	a-name	0	0	2	0	Apache-2.0	1 VIEW RELEASES
@coding-blocks/bootstrap		4.2.1-cb1	a-name	0	0	1	0	MIT	1 VIEW RELEASES
jquery		1.10.2	a-name	0	0	1	0	MIT	1 VIEW RELEASES
ace-builds		1.4.1	a-name	0	0	0	0	BSD	1 VIEW RELEASES
backbone		1.2.0	a-name	0	0	0	0	MIT	1 VIEW RELEASES
code-editor-module		0.0.26	a-name	0	0	0	0	MIT	1 VIEW RELEASES

Note: Open source scan results from retired releases are excluded.

The following table describes how to navigate the Open Source Components page.

Task	Action
Export the open source component list	Click Export . A link to download a CSV file is sent to the email address specified in your account settings. The link is valid for 7 days from the time the email is sent.
View results from specific scan tool	Select the scan tool results you want to view from the drop-down list.
Search the open source component list	Type a keyword or phrase in the search text field and press Enter .
View the applications and corresponding releases that use a component.	Click View Releases in the row of a component.

Sonatype Integration End of Life

Fortify on Demand will remove the Sonatype open source software composition analysis offering in 2024. Data from Sonatype scans will be deleted in Fortify on Demand on January 31st, 2024.

Tenants that need to retain their Sonatype scan data can perform the followings to migrate their data:

- Export the open source component list on the Open Source Component pages. The download is a CSV file.
- Run issue data exports filtered to include only open source issues.
- Tenants can have active Debricked and Sonatype entitlements at the same time in order to facilitate a one-time switch from Sonatype to Debricked. This switch applies per release. For more information, see ["Editing Release Settings" on page 67](#).

For releases that have switched from Sonatype to Debricked, upon completion of the first Debricked scan, Sonatype issue audit entries, comments, and evidence are copied over to Debricked issues that have matching CVE values. Sonatype data will not be copied over to subsequent Debricked scans.

- Contact support to request a one-time download of Sonatype issues.

Dynamic Assessments

A dynamic assessment analyzes a running web application for security vulnerabilities. Dynamic assessments include automated testing powered by Fortify WebInspect, manual analysis, and Continuous Application Monitoring.

Dynamic testing using Fortify WebInspect involves the following modes:

- Crawl, the process by which Fortify WebInspect identifies the structure of the target website
- Audit, the actual vulnerability scan

This section contains the following topics:

Preparing the Website for Dynamic Testing	124
Preparing Web API Files	125
Setting Up Fortify on Demand Connect	128
Configuring a Dynamic Scan	129
Scheduling the Dynamic Scan Through the Portal	147
Editing Dynamic Scan Settings for Ongoing and Completed Scans	149
Continuous Application Monitoring	150
Configuring Application Monitoring	150
Canceling an Application Monitoring Scan	152
Viewing Application Monitoring Issues	152
Viewing Risk Profile Results	153

Preparing the Website for Dynamic Testing

For all dynamic assessments, make the following preparations to facilitate the testing process:

- Confirm that the web application and user credentials are functioning before the assessment. If the web application uses client certificate authentication, contact support.
- Disable all multi-factor authentication controls for the duration of the testing window. This includes secondary authentication mechanisms such as SMS messages, email verifications, CAPTCHA, OATH Tokens, and physical tokens. Alternatively, the assessment can be performed unauthenticated to evaluate the security of the application content available to unauthenticated users.
- Complete all functional and performance testing before the assessment and freeze the application's code for the duration of the testing window.
- As a standard precaution, Fortify recommends that you back up all of your data before beginning the testing process. When testing is complete, restore your data from a backup that is known to be good to avoid any chance of data corruption.
- Add the Fortify on Demand IP addresses to the allow list in firewalls, IPSs, IDSs, and WAFs to ensure the application can be scanned by the dynamic testing team. You can obtain the IP addresses from the Dynamic Scan Setup page in the portal. Adhoc addresses may be used with your consent only when conditions necessitate it.
- Provide the Fortify on Demand IP addresses to your security operations and network operations teams, so they know not to block the IP addresses if they see attacks being submitted against the site, which are part of planned recurring security scanning.
- As long as your website is accessible through the http/https default ports (80/443), you do not need to open any additional ports for the assessment.

For dynamic assessments that utilize automation during the scanning process, make the following preparations:

- Create workflow macros to run scans as Workflow-Driven Scans. A workflow macro is a recording of HTTP events when you navigate a Web site using a Web Macro Recorder tool. You can create workflow macros with Fortify WebInspect's Event-based Web Macro Recorder, available on the Tools page in the portal. For instructions on creating workflow macros, see the *Fortify WebInspect Tools Guide* at [Fortify WebInspect Documentation](#).
- Create login macros for authentication. A login macro is a recording of the events that occur when you access and log in to a Web site using a Web Macro Recorder tool. You can create login macros with Fortify WebInspect's Event-based Web Macro Recorder, available on the Tools page in the portal. For instructions on creating login macros, see the *Fortify WebInspect Tools Guide* at [Fortify WebInspect Documentation](#).

Preparing Web API Files

If a dynamic assessment includes web API testing, you need to provide project files with working sample data for proper security testing. Prepare project files according to the following guidelines.

Note: If you do not have project files with working sample data, ask your QA and development teams for assistance in obtaining these files. They usually have collections of these files for testing web API functions.

REST

- Provide an API definition, such as an OpenAPI document file or URL or Postman collection file or URL.

Note: Postman environment files are not supported.

- Requests must include valid parameter values to establish the baseline application behavior.
- If your API requires authentication, provide credentials that will be valid during the testing period.
 - If you are providing a Postman collection, configure authentication in the Postman collection.

Note: Dynamic authentication is not supported.

- If you are providing an OpenAPI document, provide the credentials on the Dynamic Scan Setup page.

SOAP

- Provide a Web Service Definition Language (WSDL) file or URL.
- Provide request and response pairs in text or XML format or as a SoapUI project or Postman collection file.
- Requests must include valid parameter values to establish the baseline application behavior.
- If your API requires authentication, provide credentials that will be valid during the testing period.
- If you are submitting a SoapUI project or Postman collection file, configure authentication in the project file. You can also provide the information in the **Additional Notes** or **Additional Documentation** fields.

gRPC

- Provide a proto file. If additional imports are needed, they must be combined with the primary proto file into a "master" proto file. gRPC proto files must be self-contained. Any imports must be to internally recognized resources and not to user-generated files. Fortify WebInspect cannot identify file paths from imported proto files.

GraphQL

- Provide a GraphQL introspection file or URL. The GraphQL API must have introspection enabled to download the schema contents for the scan.

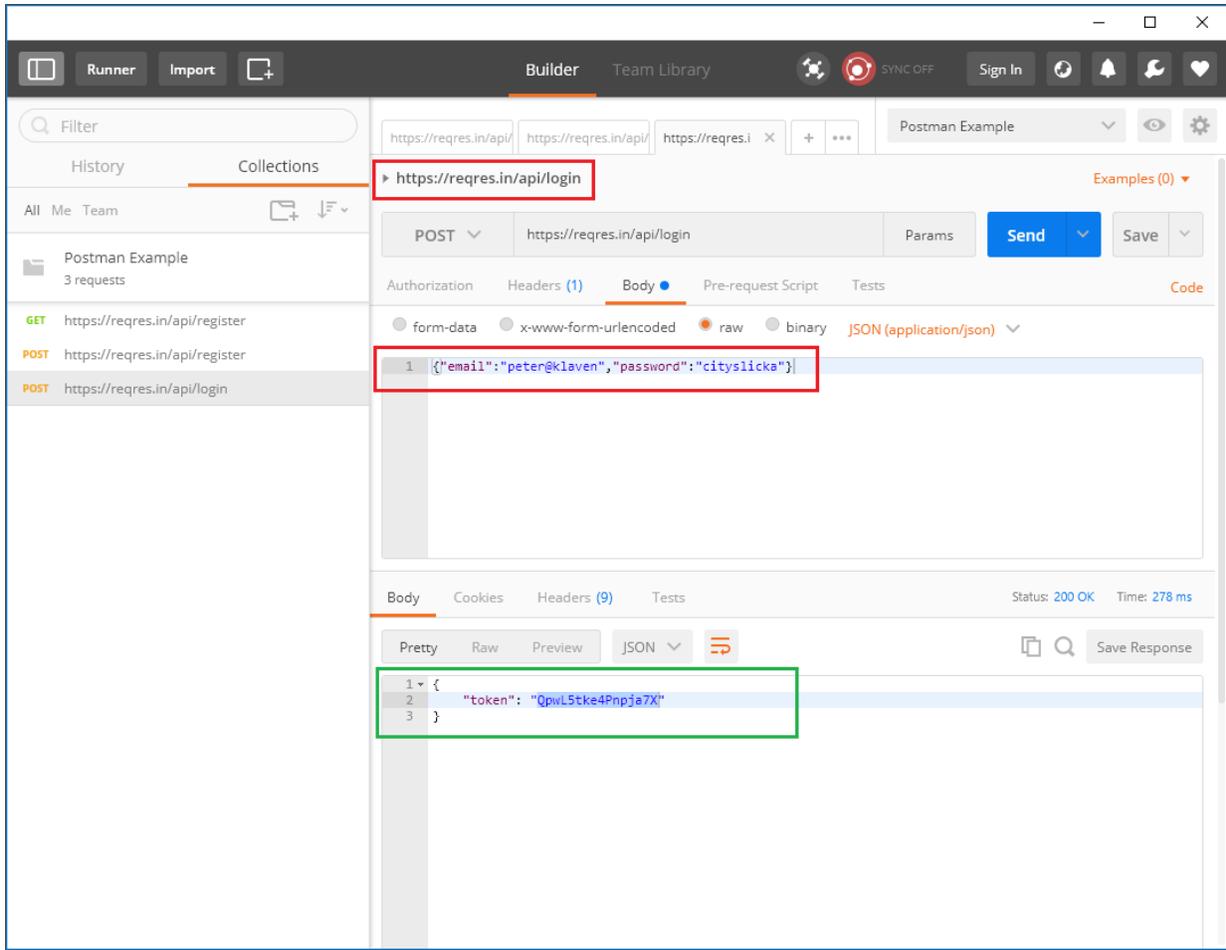

Examples

The following examples show project files with working sample data.

Note: Only input parameter values need to be provided—the responses are shown here for information only.

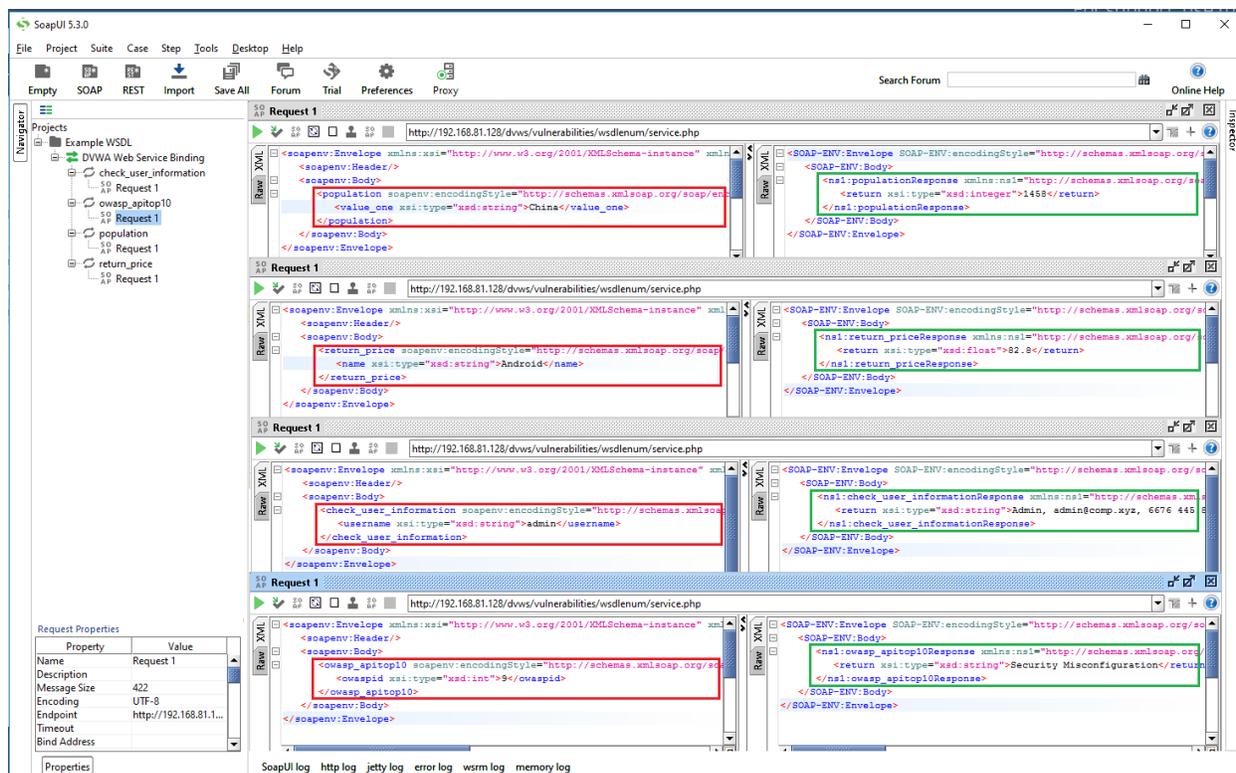

Example 1 (REST)

The following example shows a RESTful API endpoint that has been loaded in the Postman UI. The endpoint handles authentication for an application. The screen shows a request with the correct username and password input values (framed in red) and the response from the application (framed in green).

Example 2 (SOAP)

The following example shows a WSDL file that has been loaded in the SOAPUI UI and updated with working parameter values. The screen shows four requests with the correct input values (framed in red) and the corresponding responses from the web service (framed in green).

Setting Up Fortify on Demand Connect

You can use Fortify on Demand Connect to easily set up site-to-site VPN for dynamic assessments of internally facing web applications. Fortify on Demand Connect implements an OpenVPN server and client configuration to create secure site-to-site connections. You need to install the OpenVPN client, available as a Docker container.

Note: Fortify on Demand Connect is currently available in the AMS environment. If your tenant is not in the AMS environment, you can preview Fortify on Demand in a sandbox environment. Contact support if you are interested in trying out Fortify on Demand Connect.

The following instructions assume that you have familiarity with installing, configuring, and using Docker.

To set up Fortify on Demand Connect:

1. Pull the Fortify on Demand Connect Docker image on Docker Hub. Access to the Fortify Docker repository requires credentials and is granted through your Docker ID. To access the Fortify Docker repository, email your Docker ID to mfi-fortifydocker@opentext.com.
2. Install the Docker container on a Linux x86_64 machine. The machine must meet the following requirements:
 - Minimum supported Docker Engine version: 20.10.17
 - Access to the internally facing application

3. (Security Leads) Add a Fortify on Demand Connect network in Fortify on Demand. See "[Adding a Fortify on Demand Connect Network](#)" on page 273.
4. (Security Leads) Copy the docker command for the network and run it on the machine before the dynamic scan is scheduled. The following is an example docker command:

```
docker run --name fdc_client -d \  
-e "FDC_ADDRESS=35.155.176.67:443" \  
-e "FDC_UNAME=fodconnect_username" \  
-e "FDC_UPSWD=fodconnect_password" \  
-e "FDC_PROXY=3128" \  
--privileged fortifydocker/fortify-connect:23.1.0.5.alpine.3.17
```

The container ID is returned if the docker command was successful.

Configuring a Dynamic Scan

After preparing your web application for a dynamic assessment, you need to complete the Dynamic Scan Setup page. You only need to configure the dynamic scan settings once per release as the settings are carried over to the next scan. You can edit settings as needed for subsequent assessments.

Note: Dynamic scan settings prior to 22.4 were saved at the application level. Save or update existing dynamic scan settings to have them saved at the release level.

To configure a dynamic scan:

1. Select the Applications view.
Your Applications page appears.
2. Click the name of the application.
The Application Overview page appears.

The screenshot shows the Fortify on Demand interface for the application 'WebGoat (.NET)'. The 'Policy Compliance' section shows a 'FAIL' status with a 'view' link. The 'Issues In Production' section shows four bars representing issue counts: CRITICAL (135), HIGH (151), MEDIUM (11), and LOW (74). The 'Releases' section shows a table with one release listed.

START SCAN	RELEASE	COPY STATE	SOURCE RELEASE	SDLC STATUS	POLICY COMPLIANCE	# ISSUES	STATIC	OPEN SOURCE	DYNAMIC
<input type="checkbox"/> START SCAN >	5.4			Production	★☆☆☆☆ FAIL	CRITICAL 135 HIGH 151 MEDIUM 11 LOW 74	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

3. Click **Start Scan** for the release that you want to have assessed and select **Dynamic**.
The Dynamic Scan Setup page appears.

For more information, see "Setting Up Fortify on Demand Connect " on page 128.</p> <p>Important! A connection must be initialized between the VPN client and the VPN server before scheduling the scan.</p>

- If needed, you can configure additional scan settings in the sections appearing below the required fields. The sections that are available depend on the assessment type selected.

Scope (Dynamic Website, Dynamic+ Website, Dynamic+ API)

To edit the scope of the scan, click **Scope** and complete the fields as needed.

▼ Scope

Fortify on Demand may scan the entire host of the designated URL. Other domains and subdomains will not be scanned during the assessment.

- Scan entire host (snas.nbcuni.com)
 Restrict scan to URL directory and subdirectories [?]

Allow HTTP (:80) and HTTPS (443)

Allow form submissions during crawl [?]

Exclude URLs which contain

 +

Include subdomain URLs

 +

Field	Description
Scan entire host (<URL>)	<p>Select one of the following options:</p> <ul style="list-style-type: none"> Scan entire host (<URL>) (default): the entire host will be scanned <div style="background-color: #f0f0f0; padding: 10px; margin-top: 10px;"> <p>Example: Given https://foo.com/home, the following URLs will be included:</p> <ul style="list-style-type: none"> https://foo.com/ https://foo.com/contact-us.html https://foo.com/folder/ https://foo.com/folder/folder2/page.aspx https://foo.com/home/folder/ https://foo.com/home/index.html </div>
Restrict scan to URL directory and subdirectories	<ul style="list-style-type: none"> Restrict the scan to the URL directory and subdirectories: only the directory denoted by the last slash in the URL and its subdirectories will be scanned. If you select this option, make sure the last slash denotes the directory to which you want the scan to be restricted. <div style="background-color: #f0f0f0; padding: 10px; margin-top: 10px;"> <p>Example: Given https://foo.com/home/, the following URLs will be excluded:</p> <ul style="list-style-type: none"> https://foo.com/ https://foo.com/folder/ https://foo.com/contact-us.html https://foo.com/folder/folder2/page.aspx </div>
Allow HTTP (:80) and	Select the check box to allow both HTTP and HTTPS scanning of the site (default).

Field	Description
HTTPS (:443)	<p>Example: Given https://foo.com/home, if the Scan entire host option is selected, http://foo.com/ and its subdirectories will be included. If the Restrict scan to URL directory and subdirectories option is selected, only http://foo.com/home and its subdirectories will be included.</p>
Allow form submissions during crawl	<p>Select the check box to allow form submissions during the crawl of the site (default). This uncovers additional application surface area that can then be examined for a more thorough scan.</p> <p>Not selecting the check box does not prevent form submissions during vulnerability checks. Detection of many critical vulnerabilities, such as SQL injection and cross-site scripting, requires form submissions. To exclude specific web functionalities from form submissions, specify those URLs in the Exclude URLs that contain field.</p>
Exclude URLs that contain	<p>(Optional) Provide a full or partial URL and click + to exclude URLs matching the string from being scanned. Add a new entry for each string. The field is not case-sensitive.</p> <p>Example: https://foo.com/login.html, login.html</p>
Include URLs	<p>(Optional, Dynamic+ Website assessment) By default, Fortify on Demand does not scan URLs outside the provided top-level domain. To audit resources linked to the Dynamic Site URL domain, such as subdomains, APIs, and offsite resources, type the URL and click +. Add a new entry for each additional URL.</p> <p>Do not include URLs that are under the Dynamic Site URL domain, offsite domains, or third party applications.</p> <p>Example: Given https://foo.com/home, valid URLs include:</p> <ul style="list-style-type: none"> • www.foo.com (subdomain) • API.aws.com (API) • authfoo.com/login • api.foo.com • api.foo2.com

Scope (Dynamic Website as Workflow-Driven Scan)

To edit the scope of the scan, click **Scope**. A list of the hosts defined in the workflow macro appears. Select the hosts that will be scanned.

∨ Scope

When a macro runs it has a number of URLs that it pulls from that may not be obvious when building the macro. For example, each time an advertisement is shown on a page an external URL is associated with that advertisement. If you wanted your scan to execute checks against that site you would indicate that host name as an allowed host below

zero.webappsecurity.com:80 zero.webappsecurity.com:443

Scope (DAST Automated)

To edit the scope of the scan, click **Scope** and complete the fields as needed.

∨ Scope

Fortify on Demand may scan the entire host of the designated URL. Other domains and subdomains will not be scanned during the assessment.

Scan entire host (zero.webappsecurity.com) Restrict scan to URL directory and subdirectories [?]

Exclude URLs which contain

+

Enable Redundant Page Detection [?]

Compares the page structure to each crawled page to identify and exclude processing of redundant resources.

Scan Policy

Timebox Scan Duration (Hours) [?]

Timeboxing a scan will limit the scanning activity to that duration.

Field	Scan Type	Description

Field	Scan Type	Description
Restrict scan to URL directory and subdirectories		<p>subdirectories: only the directory denoted by the last slash in the URL and its subdirectories will be scanned. If you select this option, make sure the last slash denotes the directory to which you want the scan to be restricted.</p> <p>Example: Given <code>https://foo.com/home/</code>, the following URLs will be excluded:</p> <ul style="list-style-type: none"> ○ <code>https://foo.com/</code> ○ <code>https://foo.com/folder/</code> ○ <code>https://foo.com/contact-us.html</code> ○ <code>https://foo.com/folder/folder2/page.aspx</code>
Exclude URLs that contain	Website	<p>(Optional) Provide a full or partial URL and click + to exclude URLs matching the string from being scanned. Add a new entry for each string. The field is not case-sensitive.</p> <p>Example: <code>https://foo.com/login.html</code>, <code>login.html</code></p>
Enable Redundant page detection	<ul style="list-style-type: none"> • Website • Workflow-Driven Scan 	<p>Select the check box to enable comparison of page structure to determine the level of similarity, allowing the sensor to identify and exclude processing of redundant resources.</p> <p>Important! Redundant page detection works in the crawl portion of the scan. If the audit introduces a session that would be redundant, the session will not be excluded from the scan.</p>
Scan Policy	Policies differ by scan type	<p>Select the policy (collection of vulnerability checks and attack methodologies that the sensor deploys against a Web application):</p> <p>Standard: A standard scan includes an automated crawl of the server and performs checks for known and unknown vulnerabilities such as SQL Injection and Cross-Site Scripting as well as poor error handling and weak</p>

Field	Scan Type	Description
		<p>SSL configuration at the web server, web application server, and web application layers.</p> <p>Criticals and Highs: Use the Criticals and Highs policy to quickly scan your web applications for the most urgent and pressing vulnerabilities while not endangering production servers. This policy checks for SQL Injection, Cross-Site Scripting, and other critical and high severity vulnerabilities. It does not contain checks that may write data to databases or create denial-of-service conditions, and is safe to run against production servers.</p> <p>Passive Scan: The Passive Scan policy scans an application for vulnerabilities detectable without active exploitation, making it safe to run against production servers. Vulnerabilities detected by this policy include issues of path disclosure, error messages, and others of a similar nature.</p> <p>Api: The API policy contains checks that target various issues relevant to an API security assessment. This includes various injection attacks, transport layer security, and privacy violation, but does not include checks to detect client-side issues and attack surface discovery such as directory enumeration or backup file search checks. All vulnerabilities detected by this policy may be directly targeted by an attacker. This policy is not intended for scanning applications that consume Web APIs.</p>
Timebox Scan Duration (Hours)	<ul style="list-style-type: none"> • Website • API 	Specify the maximum duration of the scan. If the scan is not completed at the end of the specified duration, the scan is terminated and partial results are available. If the scan is completed during the specified duration, then complete results are available. Incremental scanning is not supported.

Authentication (Dynamic Website, Dynamic+ Website, Dynamic+ API)

To edit the authentication settings, click **Authentication** and complete the fields as needed.

▼ Authentication

Forms Authentication Required

Primary Username Primary Password

Secondary Username Secondary Password

Network Authentication Required

Additional Authentication Instructions

Field	Description
Form Authentication	(Optional) Select the check box if form authentication is required. Provide user names and passwords for at least two users. To add more credentials, use the Additional Notes field at the bottom of this form.
Network Required	(Optional) Select the check box if network authentication is required. Provide a username and password.
Additional Authentication Instructions	(Optional) Select the check box if additional authentication is required, such as an account number or tenant code, and type instructions. Important! Fortify on Demand does not support multi-factor authentication. Examples include authentication controls involving SMS messages, email verifications, CAPTCHA, OATH Tokens, and physical tokens.

Authentication (DAST Automated)

To edit the authentication settings, click **Authentication** and complete the fields as needed.

▼ Authentication [?]

Use Site Authentication

Request Login macro creation [?]

Login macros provide access to protected locations of your application. Therefore using a login macro is highly recommended to increase the coverage of your scan.

Please Upload your Login Macro File

Use Network Authentication

Authentication Type

Network Username Network Password

Field	Scan Type	Description
Use Site Authentication	Website	<p>(Optional) Select the check box if site authentication is required. Upload the login macro (see "Preparing the Website for Dynamic Testing" on page 124).</p> <p>Note: Make preparations so that the user credentials remain valid for the scan duration, such as increasing the password expiration duration. The scan will be canceled if site authentication fails.</p>
Request Login macro creation	Website	<p>Select the check box to request generation of a login macro by the testing team once per application. Upon scan completion, the login macro will be available for download on the Scans page.</p> <p>Important! Login macro generation and false positive removal are an optional service that is available once per application and consumes 1 additional assessment unit.</p> <p>Important! If you want to request both login macro generation and false positive removal, you must select both options together; once a scan that includes either option has completed, both options will be disabled for subsequent scans.</p>
Use Network Authentication		<p>(Optional) Select the check box if network authentication is required. Provide the authentication type, username, and password.</p> <p>Note: The scan will be canceled if network authentication fails.</p>

APIs (Dynamic API, DAST Automated: API)

To add instructions for scanning web APIs utilized by the site, click **APIs**. For information on preparing web API project files suitable for automated testing, see ["Preparing Web API Files" on page 125](#).

∨ APIs

To help ensure quality results and avoid paused scans, please review the detailed instructions for API assessments. ⓘ

API Type

- a. Select the API definition type in the **API Type** field: **Postman Collection, OpenAPI, GraphQL, gRPC.**

Note: OpenAPI Specification versions 2.0 and 3.0 are supported.

b. Perform the relevant task based on your API definition type:

API Definition Type	Procedure
Postman	Click ... and browse to and select the Postman collection file. The JSON file format is accepted. If a file already exists, you can use the existing file or upload a new file.
OpenAPI	Select File or URL to the OpenAPI specification and perform the relevant task based on your selection.
	<p>File</p> <ul style="list-style-type: none"> i. Click ... and browse to and select the OpenAPI document file. The JSON file format is accepted. If a file already exists, you can use the existing file or upload a new file. ii. If the API requires authentication, provide the API key value in the API Key field. <p>Note: The supported security scheme is API key. Multiple API keys in requests are not supported.</p>
	<p>URL to the OpenAPI specification</p> <ul style="list-style-type: none"> i. Provide the OpenAPI document URL. ii. If the API requires authentication, provide the API key value in the API Key field. <p>Note: The supported security scheme is API key. Multiple API keys in requests are not supported.</p>
GraphQL	Select File or URL and perform the relevant task based on your selection.
	<p>File</p> <ul style="list-style-type: none"> i. Click ... and browse to and select the GraphQL introspection file. The JSON file format is accepted. If a file already exists, you can use the existing file or upload a new file. ii. Select the API scheme in the API Scheme Type field: HTTP, HTTPS, HTTP and HTTPS.

	<ul style="list-style-type: none"> iii. In the API Host field, provide the URL or hostname. iv. In the API Service field, provide the directory path for the API service.
	<p>URL</p> <p>Provide the GraphQL introspection endpoint URL.</p> <p>Note: The GraphQL API must have introspection enabled to download the schema contents for the scan.</p>
gRPC	<ul style="list-style-type: none"> i. Click ... and browse to and select the gRPC proto file. The PROTO file format is accepted. If a file already exists, you can use the existing file or upload a new file. ii. Select the API scheme in the API Scheme Type field: HTTP, HTTPS, HTTP and HTTPS. iii. In the API Host field, provide the URL or hostname. iv. In the API Service field, provide the directory path for the API service.

- c. In the **Additional Instructions** field, provide additional instructions.

APIs (Dynamic+ API)

For information on preparing web API project files suitable for automated testing, see "[Preparing Web API Files](#)" on page 125.

- a. To add instructions for scanning web APIs utilized by the site, click **APIs**.

∨ APIs

To help ensure quality results and avoid paused scans, please review the detailed instructions for API assessments. ⓘ

API Type

- b. Select the API definition type in the **API Type** field: **SOAP, REST, GraphQL, gRPC**.
- c. Perform the relevant task based on your API definition type:

API Definition Type	Procedure
SOAP	<ul style="list-style-type: none"> i. Upload a WSDL file that contains working sample data. The JSON, WSDL, TXT, and XML file formats are accepted.

	<ul style="list-style-type: none"> ii. (Optional) In the Additional Instructions field, provide additional instructions, such as required headers, tokens, or authentication mechanisms. iii. (Optional) Provide the username and password or API key and password.
REST	<ul style="list-style-type: none"> i. Upload an API definition file that contains working sample data. The JSON, WSDL, TXT, and XML file formats are accepted. ii. (Optional) In the Additional Instructions field, provide additional instructions, such as required headers, tokens, or authentication mechanisms. iii. (Optional) Provide the username and password or API key and password.
GraphQL	Select File or URL and perform the relevant task based on your selection.
	<p>File</p> <ul style="list-style-type: none"> i. Click ... and browse to and select the GraphQL introspection file. The JSON file format is accepted. If a file already exists, you can use the existing file or upload a new file. ii. Select the API scheme in the API Scheme Type field: HTTP, HTTPS, HTTP and HTTPS. iii. In the API Host field, provide the URL or hostname. iv. In the API Service field, provide the directory path for the API service. v. In the Additional Instructions field, provide additional instructions.
	<p>URL</p> <ul style="list-style-type: none"> i. Provide the GraphQL introspection endpoint URL. <div style="background-color: #e0e0e0; padding: 5px; margin: 5px 0;"> <p>Note: The GraphQL API must have introspection enabled to download the schema contents for the scan.</p> </div> <ul style="list-style-type: none"> ii. In the Additional Instructions field, provide additional instructions.
gRPC	<ul style="list-style-type: none"> i. Click ... and browse to and select the gRPC proto file. The PROTO file format is accepted. If a file already exists, you can use the existing file or upload a new file.

- ii. Select the API scheme in the **API Scheme Type** field: **HTTP, HTTPS, HTTP and HTTPS**.
- iii. In the **API Host** field, provide the URL or hostname.
- iv. In the **API Service** field, provide the directory path for the API service.
- v. In the **Additional Instructions** field, provide additional instructions.

Scheduling & Availability (all assessments)

To edit the scan frequency and site availability settings, click **Scheduling & Availability** and complete the fields as needed.

∨ Scheduling & Availability

Repeat Frequency ⓘ
(Do not repeat) ▾

Generate WAF Virtual Patch

Request pre-assessment conference call

Field	Description
User agent	Select the user agent type that will be used for the site: Desktop browser (default), Mobile browser
Concurrent request threads	<p>Select the number of concurrent requests that will be used for the scan:</p> <ul style="list-style-type: none"> • Standard (default): 5 crawl requestor threads, 10 audit requestor threads, 20 second request timeout • Limited: 2 crawl requestor threads, 3 audit requestor threads, 5 second request timeout <p>Selecting the Limited option will reduce the scan load but will also cause the scan to take longer than the standard SLO.</p>
Additional Notes	<p>(Optional) Type additional information that the testing team needs to know before starting the assessment.</p> <p>Note: Free form exclusions and whitelist notes have been migrated to this field.</p>
Additional Documentation	<p>(Optional) Upload documentation (30 MB limit) that facilitates testing of the application. Uploaded files are displayed in the Uploaded Files section below.</p> <p>Supported file types: DOC, DOCX, PPT, TXT, PDF, PPTX, ZIP, XLS, XLSX, CSV.</p>
Generate WAF Virtual Patch	<p>Note: Contact support to enable the WAF feature.</p> <p>(Optional) Select the checkbox to generate an export of vulnerabilities to a web application firewall (WAF). The export is an XML file and is compatible with the following WAFs: Imperva and F5. Once the assessment is complete, you can download the file on the Scans page</p>
Request pre-assessment conference call	<p>(Optional, Dynamic Premium and Dynamic+ assessments) Select the check box to request a pre-assessment conference call. The check box is cleared after the assessment is completed.</p> <p>Note: You cannot request a pre-assessment conference call for a scan scheduled within 72 hours.</p>

6. Once you have configured the scan settings, click **Save**.

- If the form is complete, the **Setup Status** is marked as **Valid**.
- If the form is incomplete, the **Setup Status** is marked as **Incomplete**. A list of the issues appears at the top of the page. You can hover over the **x** icon next to **Setup Status** to display the list.

Scheduling the Dynamic Scan Through the Portal

Once you have prepared your web application and configured the dynamic scan settings, you can schedule the dynamic scan. You can have only one in progress dynamic scan across all releases of an application.

To schedule a dynamic scan:

1. Click **Start Scan**.

Note: If the application has an active dynamic scan, you are blocked from starting another scan.

The **Start Dynamic Scan** window opens, displaying the current time and time zone.

Start Dynamic Scan - http://zero.webappsecurity.com/

BACK NEXT START SCAN

2. Click the **Start Date** field.
Click **Now** to schedule a scan immediately or use the calendar to select a start date and time, then click **Done**.
3. Click **Next**.
Site accessibility check results appear. The site accessibility check looks for the following criteria:

- The URL resolves.
- The DNS of the hostname resolves.
- Fortify on Demand receives a valid HTTP response.
- The server returns a valid response (the status code is listed).
- The final URL, if there are any redirects, is within the target domain (the final URL is listed).
- Whether the application has limited or complex application functionality (such as links , forms, or scripts).
- Whether updated credentials were provided if authentication is required.

Resolve any issues before starting your scan in order to prevent the scan from being paused.

Note: The site accessibility check is available for website scans (with the exception of sites accessed through VPN).

4. Click **Next**.

A summary of the dynamic scan setup values appears.

BACK **NEXT** **START SCAN**

5. Review the summary. If necessary, click **Back** and make any corrections. If the values are correct, click **Start Scan**.

You are redirected to Release Scans page; your new scan has a **Scheduled** status. The scan will begin at your scheduled time. If you schedule recurring scans, the release will be scanned at the intervals you defined until you update your dynamics scan settings.

Related Topics

In addition to using the portal, you can submit a dynamic assessment using the following methods:

- Build server integration tools: Fortify Azure DevOps Extension, Fortify on Demand Jenkins Plugin (coming soon). For more information, see "[CICD Tool](#)" on page 337.
- Fortify on Demand API. For more information, see "[Fortify on Demand API](#)" on page 324.

Editing Dynamic Scan Settings for Ongoing and Completed Scans

You can edit dynamic scan settings for scheduled scans that have not been started and paused scans. If you need to edit scan settings for an in progress scan, create a Help Center ticket to have the scan paused. The testing team will respond to the ticket.

The following fields cannot be edited after a dynamic scan has been scheduled:

- **Assessment Type**. Cancel the scan to edit the field.

- **Dynamic Site URL.** If the release does not have a completed scan, cancel the scan to edit the field. Otherwise, the field is locked.

In addition, upon successful completion of a dynamic scan, the following fields are set to values from the completed scan and locked for editing:

- **Dynamic Site URL**
- **Scan Type**
- All fields in the **Scope** section (except for DAST Automated scans)
- Workflow-Driven Scan fields
- All fields in the **Authentication** section, with the exception of username and password fields.
- All fields in the **APIs** section, with the exception of username and password fields and uploaded project files.

To edit these fields, create another release using the copy state feature and reconfigure scan settings.

Continuous Application Monitoring

Continuous Application Monitoring is included with any active dynamic subscription. Fortify on Demand performs lightweight dynamic scanning and risk profiling of an enrolled application at regular intervals. The automated, unauthenticated scans focus on OWASP Top 10 vulnerabilities and common environment or deployment issues. Fortify on Demand then provides a list of vulnerabilities and a detailed breakdown of the risk profile, enabling you to identify critically vulnerable applications that need immediate remediation.

This section contains the following topics:

Configuring Application Monitoring

Continuous Application Monitoring is available with a dynamic assessment subscription. Users with the **Manage Applications** permission can configure Application Monitoring for an application.

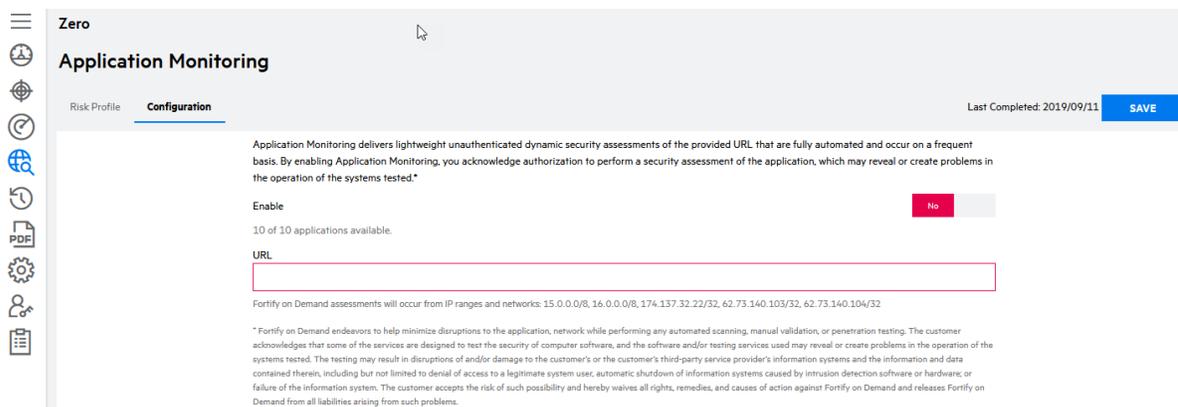

Note: An URL can have Application Monitoring enabled only once across all releases in an application.

To configure Application Monitoring:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of an application for which you want to enable application monitoring.
3. Click **Application Monitoring**.
The Application Monitoring page appears.

Note: Users with the **View Applications** permission have view-only access.

4. Select the **Configuration** tab.

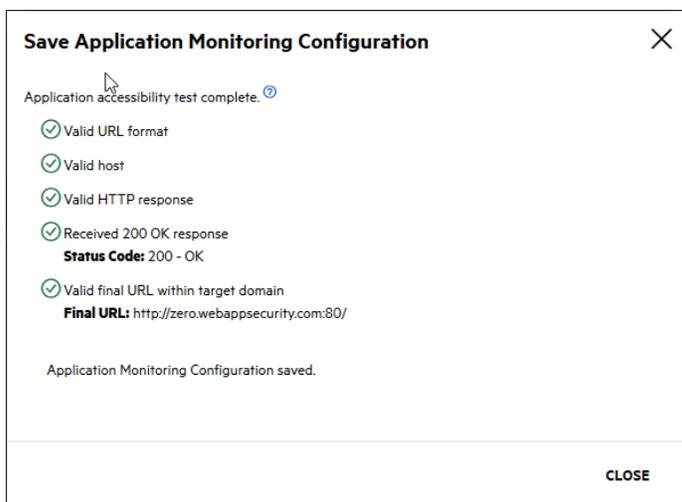

Note: Applications under dynamic subscriptions do not count towards the enrolled application quota.

5. Move the **Enable** slider from **No** to **Yes**.
6. In the **URL** field, type the URL that you are going to monitor.
7. Click **Save**.

If Application Monitoring is enabled, results of a site accessibility check appears. The site accessibility check looks for the following criteria:

- The URL resolves.
- The DNS of the hostname resolves.
- Fortify on Demand receives a valid HTTP response.
- The server returns a valid response (the status code is listed).
- The final URL, if there are any redirects, is within the target domain (the final URL is listed).

If any of the above fails, current Application Monitoring settings are not saved. Resolve all issues before configuring Application Monitoring.

8. Click **Close**.

Once Application Monitoring has been enabled, the URL will be scanned within the week. A scan will be cancelled if the site is not accessible at the time of the scan.

Canceling an Application Monitoring Scan

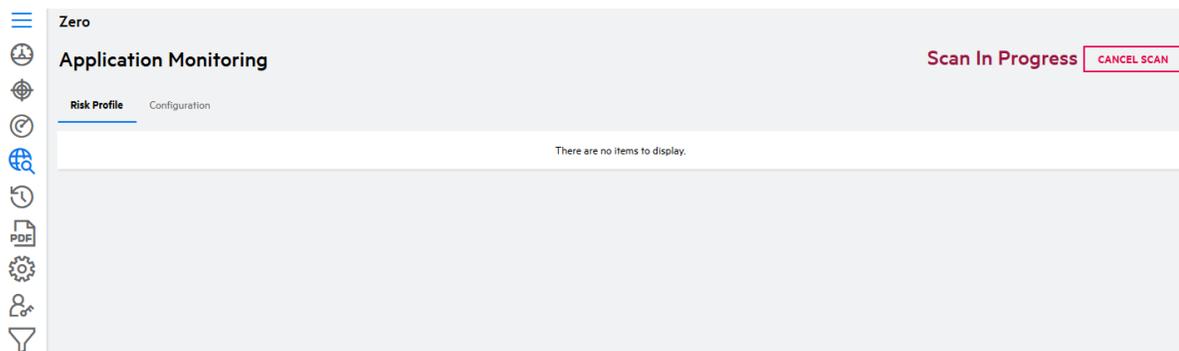

An in progress Application Monitoring scan is indicated by a **Scan In Progress** status on the top right of the Application Monitoring page. Users with the **Manage Applications** permission can cancel an in progress scan. An in progress scan is also automatically canceled when Application Monitoring is disabled.

You can cancel an Application Monitoring scan from the Your Scans or Application Scans page (see ["Canceling a Scan" on page 172](#)) or the Application Monitoring page (see below).

To cancel an in progress Application Monitoring scan:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of an application for that has an application monitoring scan in progress.
3. Click **Application Monitoring**.

The Application Monitoring page appears.

4. Click **Cancel Scan**.
A confirmation message appears.
5. Click **Yes**.
The in progress scan is cancelled.

Note: Cancelled Application Monitoring scans do not appear in any scan list.

Viewing Application Monitoring Issues

You can view Application Monitoring issues on the Application Issues page, which displays issues at the application level. For more information on viewing application issues, see ["Viewing Application Issues" on page 177](#).

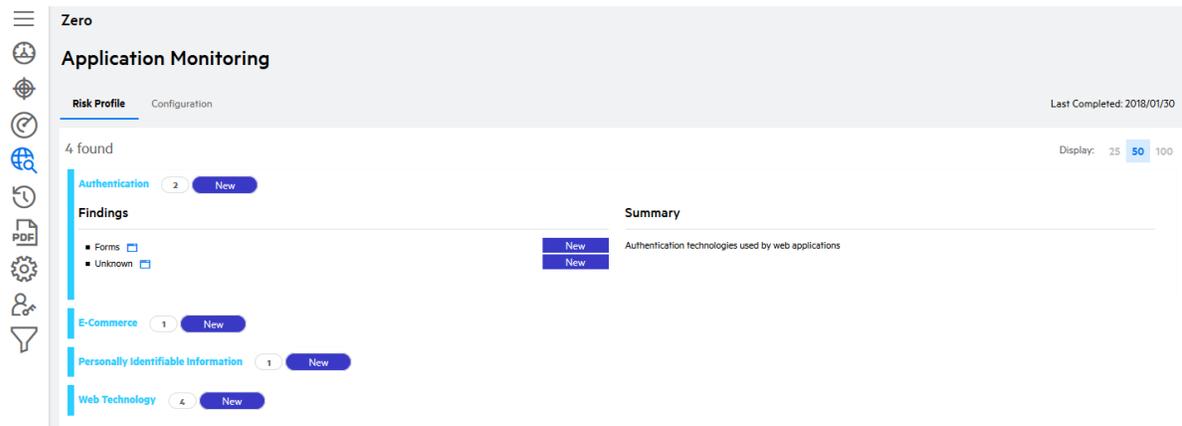

Viewing Risk Profile Results

Risk profiling of an application searches for the following application characteristics: collection of personally identifiable information (PII), e-commerce functionality, authentication methods, and web technologies used in the application. You can view an application's risk profile from the most recent risk profile scan.

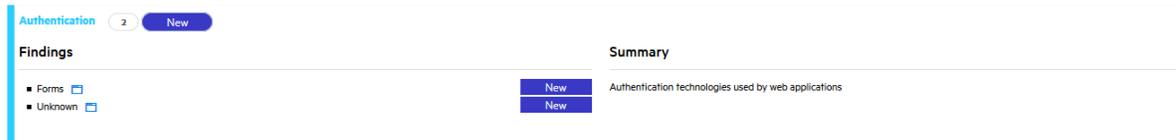

To view an application's risk profile:

1. Select the **Applications** view.
Your Application page appears.
2. Click the name of an application that has Application Monitoring enabled and for which you want to view the risk profile.
3. Click **Application Monitoring**.

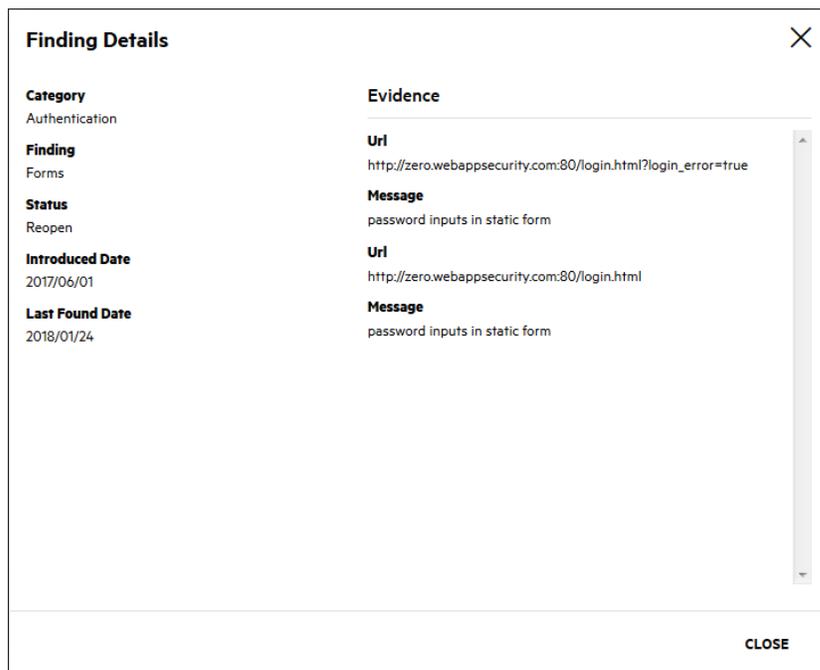

The Application Monitoring page appears. The **Risk Profile** tab displays the risk criteria found and the number of instances of each criterion.

4. Expand a risk criterion to view individual instances of that criterion.

5. Click  to open a window containing the instance details.

Mobile Assessments

A mobile assessment tests a mobile application. It offers security testing across the client, the network, and the backend server. Fortify on Demand supports the following platforms: Android, iOS.

This section contains the following topics:

Supported Platforms and Operating Systems	154
Preparing Mobile Assessment Files	155
Preparing the Backend for Mobile Testing	157
Configuring a Mobile Scan	157
Scheduling the Mobile Scan Through the Portal	162
Editing Mobile Scan Settings for an Ongoing Scan	165

Supported Platforms and Operating Systems

Hardware Platforms

Fortify on Demand supports the following hardware platforms:

	Mobile	Mobile+
Phone (small format)	N/A	Yes
Tablet (large format)	N/A	Yes
SIM/cellular service	N/A	Yes
Hardware type (Apple Watch, Samsung Galaxy)	N/A	No

Operating Systems and Architectures

Fortify on Demand supports the following operating systems and native architectures:

	Mobile	Mobile+
Minimum iOS version (<code>MinimumOSVersion</code>)	N/A	Up to 15.7
Native iOS architecture	ARMv7, ARM64	ARMv7, ARM64
Minimum Android version (<code>android:minSdkVersion</code>)	N/A	Up to 32 (Android 12)
Native Android architecture	ARMv7, ARM64	ARMv7, ARM64

Preparing Mobile Assessment Files

The first step in a mobile assessment is to prepare your mobile application's binary file for upload to Fortify on Demand. To ensure an effective analysis of the mobile application, prepare your files according to the instructions that are provided for the framework of the mobile application.

This section contains the following topics:

Preparing Android Application Files (Binary)	155
Preparing iOS Application Files (Binary)	156

Preparing Android Application Files (Binary)

For Android applications, prepare your application's binary (.aab or .apk) file according to the following instructions:

- Make sure the application does not require MDM features.
- Provide the binary file in its entirety. Since only the submitted file is tested, features that require application updates are not supported.
- For assessments that include on-device testing (Mobile+), make sure that the submitted application can be installed and run on a physical device.

- To facilitate testing for Mobile+ assessments, disable any root detection, application tampering, or certificate pinning mechanisms. Leaving in these features might result in testing limitations that impact scan coverage.
- Mobile+ assessment of AAB files supports dynamic feature modules that have `<dist:fusing dist:include="true" />` specified in the manifest.
- **Important!** If you are submitting a subsequent scan of an application, either as a remediation scan or as a new scan, Fortify recommends keeping the application identifier (the package name) consistent in order to preserve the integrity of issue tracking between scans. The application identifier is used to calculate issue identifiers that track unique issues. Changing the application identifier between scans will result in many pre-existing issues showing up as “New” instead of “Existing” in the scan results.

Related Topics:

For information on uploading Android files for static assessments, see ["Preparing Android Application Files \(Source Code\)" on page 107](#).

Preparing iOS Application Files (Binary)

For iOS applications, prepare your application's binary (.ipa) file according to the following instructions.

- For assessment that include on-device testing (Mobile+), make sure that the submitted application can be installed and run on a physical device.
- To facilitate testing for Mobile+ assessments, disable any application tampering or certificate pinning mechanisms. Leaving in these features might result in testing limitations that impact scan coverage.
- Make sure the application does not require MDM features.
- Export the application for submittal using the following supported distribution types:
 - App Store submittal (the IPA must contain executable code, so make sure the **Include bitcode** checkbox is cleared when exporting the application)
 - Ad Hoc
 - Enterprise
 - Development

Important! The following distribution types are NOT supported:

- IPA download from the App Store. The IPA is encrypted to the user who downloaded it.
- App Store submittal with the "Include bitcode" setting. The IPA does not contain executable code.

Since only the submitted file is tested, features that require application updates are not supported.

Note: If you are submitting a subsequent scan of an application, either as a remediation scan or as a scan of a new version, Fortify recommends keeping the application identifier (the bundle identifier) consistent in order to preserve the integrity of issue tracking between scans. The application identifier is used to calculate issue identifiers that track unique issues. Changing the application identifier between scans will result in many pre-existing issues showing up as “New” instead of “Existing” in the scan results.

Related Topics:

For information on preparing iOS source code files for upload, see ["Preparing iOS Application Files \(Source Code\)" on page 107](#).

Preparing the Backend for Mobile Testing

For mobile assessments that include backend, web application testing, make the following preparations to facilitate the testing process:

- Confirm that your web application and/or user credentials are functioning before the assessment.
- Complete all functional and performance testing before the assessment and freeze your application’s code for the duration of the security test engagement.
- As a standard precaution, Fortify recommends that you back up all of your data before beginning the testing process. When testing is complete, restore your data from a backup that is known to be good to avoid any chance of data corruption.
- The web application must be publicly accessible. Fortify on Demand does not support scanning over VPNs.
- Add the Fortify on Demand IP addresses to the allow list in firewalls, IPS, IDS and WAFs to ensure the application can be scanned by the mobile testing team. You can obtain the IP addresses from the Mobile Scan Setup page in the portal. Adhoc addresses may be used with your consent only when conditions necessitate it.
- Provide the Fortify on Demand IP addresses to your security operations and network operations teams, so they know not to block the IP addresses if they see attacks being submitted against the site, which are part of planned recurring security scanning.

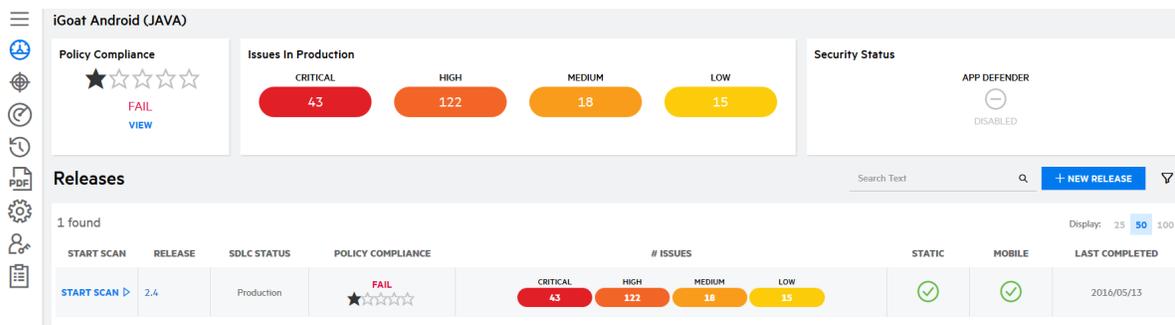

Note: As long as your website is accessible through the http/https default ports (80/443), you do not need to open any additional ports for the assessment.

Configuring a Mobile Scan

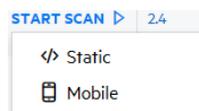

If this is the first time you are submitting a mobile assessment for a release, you need to complete the Mobile Scan Setup page. You only need to complete the page once per release as the settings are carried over to the next scan. You can edit settings as needed for subsequent assessments.

To set up a mobile scan:

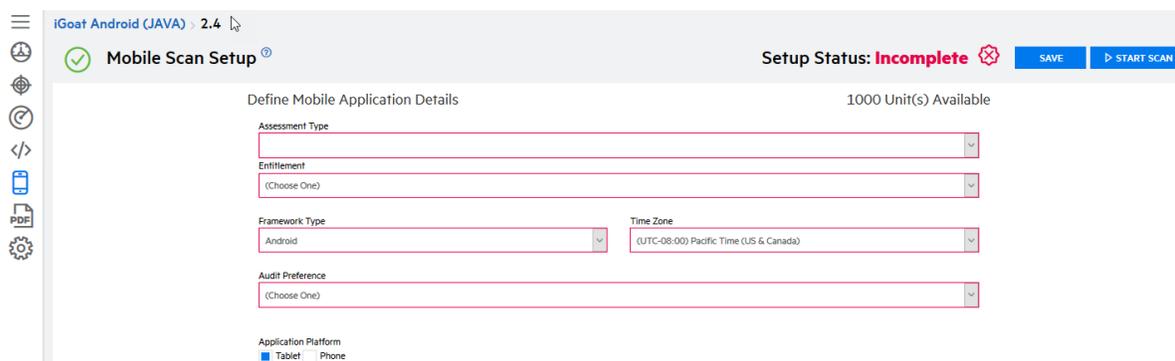

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application.
The Application Overview page appears.

3. Click **Start Scan** for the release that you want to have assessed and select **Mobile** from the menu.

The Mobile Scan Setup page appears.

4. Complete the fields as needed. Fields are required, unless otherwise noted.

Field	Description
Assessment Type	Select the assessment type. Only assessment types allowed by the organization's security policy are displayed. The SLO of the selected assessment type appears below the field.
Entitlement	Select the entitlement that the assessment will use. The field displays entitlements that are valid for the selected assessment type, including those available for purchase. If the release has an active subscription, only options that do not consume entitlements are displayed.

Field	Description
Framework Type	Select the mobile OS: iOS, Android, Windows (Premium assessments only)
Time Zone	Select your location's time zone, which is used to schedule the scan's start time.
Audit Preference	Select the audit preference. The value is fixed at Manual for Mobile Standard, Mobile Premium, and Mobile+ assessments. Automatically publish (no audit) - The scan results are automatically published upon scan completion. Manual – The scan results are reviewed by auditors before being published.
Application Platform	(Optional) Select your application's preferred platform: Phone and/or Tablet

5. If needed, you can configure additional scan settings in the sections appearing below the required fields. The sections that are available depend on the assessment type selected.

Authentication (Mobile Standard, Mobile Premium, and Mobile+)

To edit the authentication settings, complete the fields as needed in the **Authentication** section.

Authentication

Authentication Required

Multi-Factor Authentication

Field	Description
Authentication	(Optional) Select the check box if authentication is required and enter user names and passwords of at least two users. To add more credentials, use the Add additional [...] notes field at the bottom of this form.
Multi-Factor Authentication	(Optional) Select the check box if multi-factor authentication is required and specify the details of your multi-factor authentication.

APIs (Mobile Standard, Mobile Premium, and Mobile+)

To add details about web APIs, complete the fields as needed in the **APIs** section.

Web Services

Access to Web Services

Exclusions

Example URL: mail.google.com, Example Note: The shopping cart checkout function connects to the production servers. Please do not test.

Web service scanning is limited to first party controlled sites. Third party endpoints (such as Salesforce or Google Analytics) will not be tested without written approval from the endpoint owners.

Fortify on Demand assessments will occur from IP ranges and networks: 15.0.0.0/8, 16.0.0.0/8, 174.137.32.22/32, 62.73.140.103/32, 62.73.140.104/32

Fortify on Demand can work according to your sites availability restrictions. However, decreasing the scan window will cause the scan to take longer than the typical SLA.

Field	Description
Access to APIs	(Optional) Select the check box to allow Fortify on Demand to scan web APIs utilized by the application.
Exclusions	(Optional) List websites, backend web services, web APIs, or internal services the application talks to via HTTP/HTTPS that are to be excluded during the scan. This gives the testing team the correct context and boundaries for conducting the scan; domains not excluded that are discovered may be classified as vulnerabilities.
Environment Availability	<p>Select the check boxes to indicate when the environment is available for testing. Use the local time of the time zone you specified above.</p> <p>Pausing and resuming testing causes the scan to take longer than the standard SLA typically allocated for a scan. Contact the support team for more information if you have site availability constraints.</p> <div style="background-color: #f0f0f0; padding: 5px; margin-top: 10px;"> <p>Note: Application modifications during blackout periods introduce uncertainty in the findings.</p> </div>

Additional Documentation (Mobile Standard, Mobile Premium, and Mobile+)

To add additional details about the scan, complete the fields as needed in the **Additional Documentation** section.

Additional Documentation

Upload Additional documentation/information (30MB limit)

...
UPLOAD

Add additional application and assessment notes

List any special requirements for testing this application such as: requires sim card, requires a working phone number, location restrictions, certificate pinning details, root/jailbreak enforcement, etc.

Request pre-assessment conference call

Uploaded Files

NAME	CREATED
There are no items to display.	

Field	Description
Upload additional documentation/information (30MB limit)	(Optional) Upload documentation (30 MB limit) that facilitates testing of the application. Uploaded files are displayed in the Uploaded Files section below. Supported File types: DOC, DOCX, PPT, TXT, PDF, PPTX, ZIP, XLS, XLSX, CSV.
Add additional application and assessment notes	(Optional) Add any more information that the testing team needs to know to successfully build your application.
Request pre-assessment conference call	(Optional, Premium and Mobile+ assessments only) Select the check box to request a pre-assessment conference call. The check box is cleared after the assessment is completed. Note: You cannot request a pre-assessment conference call for a scan scheduled within 72 hours.

6. When you have completed the Mobile Scan Setup page, click **Save**.
 - If the form is complete, the **Setup Status** is marked as **Valid**.
 - If the form is incomplete, the **Setup Status** is marked as **Incomplete**. A list of the issues appears at the top of the page. You can also hover over the **x** icon next to **Setup Status** to display the list.

Next Step:

["Scheduling the Mobile Scan Through the Portal"](#) below

Scheduling the Mobile Scan Through the Portal

Once you have prepared your mobile application and configured the mobile scan settings, you can upload the payload and schedule the mobile scan. You can have only one in progress mobile scan across all releases of an application.

To schedule a mobile scan:

1. Click **Start Scan**.

Note: If the application has an active mobile scan, you are blocked from starting another scan.

The Start Mobile Scan window opens.

The screenshot shows a modal window titled "Start Mobile Scan" with a close button in the top right corner. On the left side, there is a vertical sidebar with four menu items: "Start Date" (which is highlighted), "Select Binary", "Payload Validation", and "Summary". The main content area of the window displays a "Start Date" field containing the text "2024/01/24 01:28 am". Below this field, it specifies the time zone as "(UTC-05:00) Eastern Time (US & Canada)". At the bottom right of the window, there are three buttons: "BACK", "NEXT", and "START SCAN".

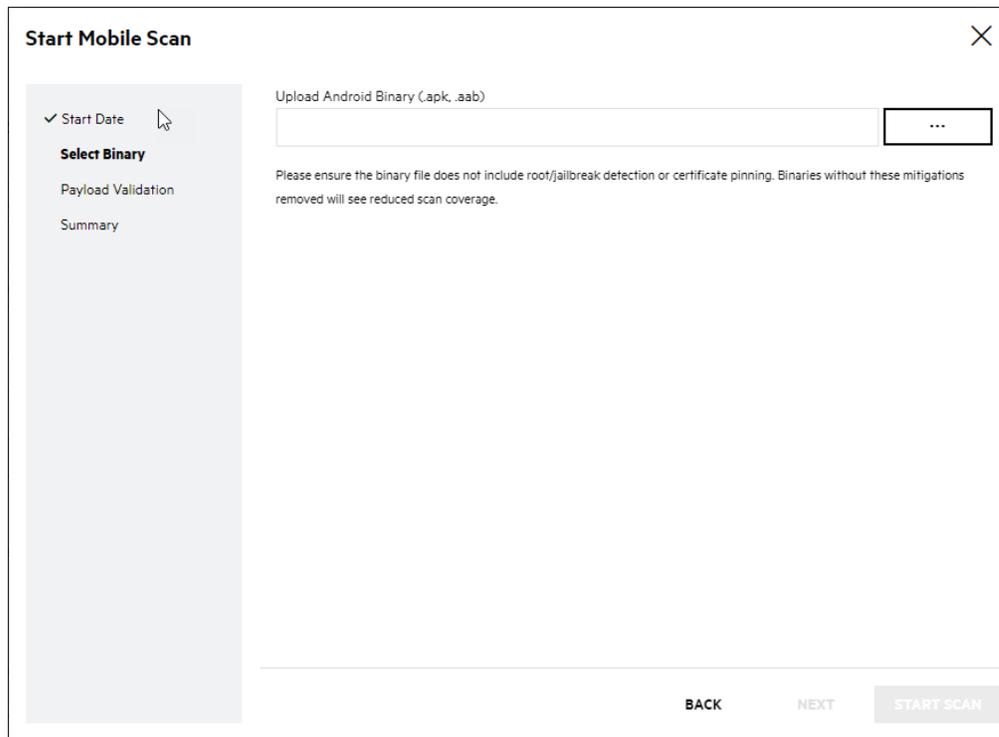

2. Click the **Start Date** field.

Click **Now** to schedule a scan immediately or use the calendar to select a start date and time, then click **Done**.

Note: This step only applies to mobile scans that include backend testing.

3. Click **Next**.

The Select Binary page appears.

4. Click ... and navigate to and select your binary file.

Note: The **Override Payload Validation** check box appears for payloads greater than 500 MB. Select the **Override Payload Validation** check box to skip the mobile payload validation.

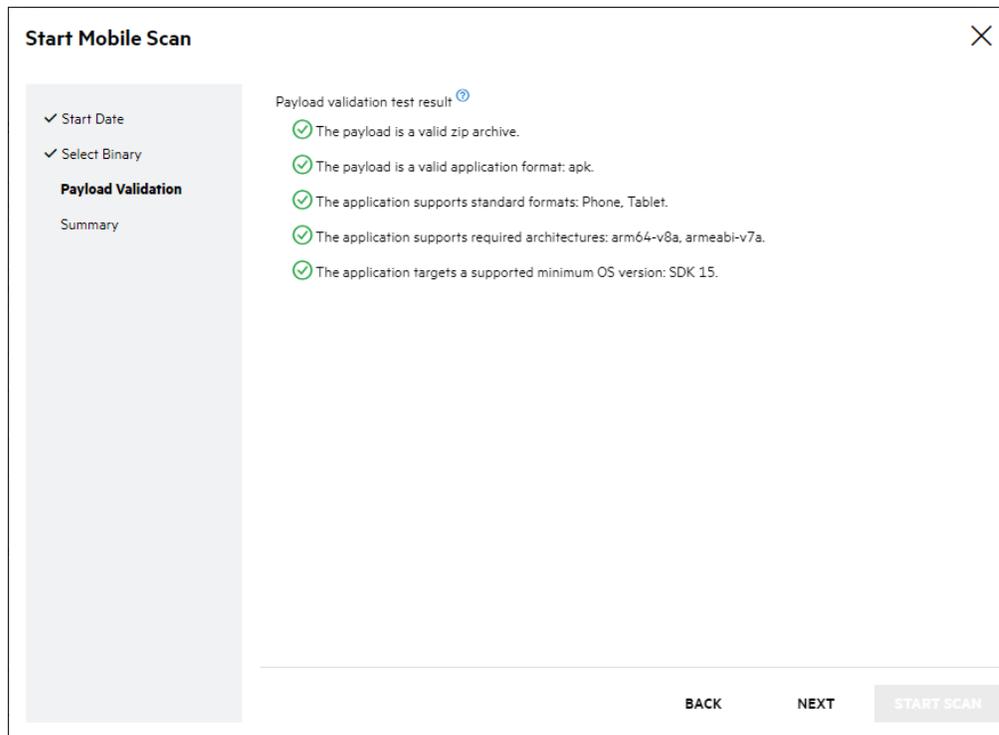

Override Payload Validation

BACK NEXT START SCAN

5. Click **Next**.

Payload validation results appear. Payload validation looks for the following criteria:

- The payload is a valid zip archive. (Mobile, Mobile+)
- The payload is a valid application format. (Mobile, Mobile+)
- The application supports standard device formats. (Mobile+)
- The application supports required architectures. (Mobile+)
- The application targets a supported minimum operating system version. (Mobile+)
- The iOS application's bundle executable contains executable code. (Mobile+)
- The IOS application's bundle executable is unencrypted. (Mobile+)
- The iOS application's bundle executable runs on a physical device. (Mobile+)

Fortify recommends resolving any issues before starting your scan in order to prevent the scan from being canceled. In some cases, the testing team can proceed with the scan in spite of validation failures. Select **Override validation failures** to continue to the next step. For more information on overriding validation failures, contact support.

6. Click **Next**.

The Summary page appears.

Start Mobile Scan

Assessment Type
Mobile+ Assessment
The service level objective (SLO) for this assessment is 3 business day(s) Pacific Standard Time

Remediation Scan
No

Application Details

Framework Type
Android

Application Platform
Phone & Tablet Application

Authentication Required
No

By starting this assessment, you acknowledge authorization to perform a security assessment of the application.

BACK NEXT **START SCAN**

7. Review the summary. If necessary, click **Back** and make any corrections. If the values are correct, click **Start Scan**.

You are redirected to the Release Scans page, your new scan has a **Scheduled** status. The scan will begin at your scheduled time.

Note: If you consumed a Premium Mobile entitlement, an associated static entitlement, named "<Mobile Premium Name> (Source)," is now available when you start a static scan.

Related Topics

In addition to using the portal, you can submit a mobile assessment using the following method:

- Fortify on Demand API. For more information, see ["Fortify on Demand API" on page 324](#).

Editing Mobile Scan Settings for an Ongoing Scan

You can edit mobile scan settings for paused scans and scheduled scans that have not yet been started. Note that you cannot edit the **Assessment Type**, **Framework Type**, **Audit Preference**, and **Application Platform** fields. If you need to edit those fields, cancel the scan and resubmit the mobile assessment.

If you need to pause an in progress scan to edit the scan settings, create a Help Center ticket. The testing team will respond directly to the ticket with any updates. For more information on creating a Help Center ticket, see ["Submitting a Help Center Ticket" on page 382](#).

Entitlement Consumption

The portal manages entitlement consumption. The available entitlement quantity is displayed on the Scan Setup pages. If you purchased scans, the number of available assessments is displayed. If you purchased assessment units, the unit cost of each assessment and the total number of available units across all entitlements are displayed.

When you start or schedule a scan, the cost is automatically deducted from your entitlement allotment. Single scans are deducted each time you perform a scan, whereas a subscription is deducted once and is then valid for the application until the subscription end date. You can identify an application that is under subscription because the entitlement cost is replaced with the subscription end date.

Additional entitlement information is available through the following sources:

- The entitlement consumption and active entitlements dashboard tiles. For more information, see ["Dashboard Graph Types" on page 232](#).
- The entitlement consumption data export. For more information, see ["Creating a Data Export Template" on page 256](#).
- Entitlements page under the Administration view. For more information, see ["Viewing Entitlements" on page 275](#).

Managing Scans

You can manage scan activities at the tenant, application, and release levels. The Your Scans page displays scans across the tenant. Users can drill down into an application; the Applications Scans page displays scans ran against the application and the Release Scans page display scans ran against the release. The Scans pages, sharing a similar layout and functionality, provide a single view where users can review scan details and track scan progress.

This section contains the following topics:

Viewing All Scans	167
Viewing Application Scans	167
Viewing Release Scans	168
Navigating the Scans Page	168
Filtering Your Scans page	170
Checking the Scan Status	171
Canceling a Scan	172
Resuming a Paused Scan	173
Viewing Help Center Tickets Linked to a Scan	174

Viewing All Scans

You can view scans for all your applications at the tenant level.

To view scans at the tenant level:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Scans**.
Your Scans page appears. The number of available entitlements is shown at the top.

Navigating the Scans Page

The following tables describe how to navigate Your Scans page, Application Scans page, and Release Scans page. The Scans pages share the same features except where noted.

Task	Action	Notes
Search the scan list	Type a keyword or phrase in the search text box and click Enter . To remove the search results, remove the text from the search box and click Enter . For information, see "Searching Applications and Releases" on page 79 .	Text search is only available on Your Scans page
Hide or display the filter list	Click ▼.	Filtering is only available on Your Scans page.

Task	Action	Notes
Expand or collapse filters	Click  or the arrow next to the filter name.	
View Help Center tickets associated with a scan	Click  .	
Request cancellation of an in progress scan	Click  and select Cancel Scan . See "Canceling a Scan" on page 172 .	
View scan summary	Click  and select Scan Summary . The scan summary includes the scan ID and a comparison to the previous scan.	
View static scan notes	Click  and select Scan Notes .	
Download scan results	Static, dynamic, and mobile: Click  and select Download Results . Open source: Click  and select Download SBOM .	
Download manifest of static scan payload	Click  and select Download Manifest . The manifest lists uploaded files and excludes images, media files, and CSS files.	
Download static scan payload	Note: Contact support to enable the download source code feature. Click  and select Download Source Code for a completed scan.	Downloading static scan payload is only available on Your Scans page and Releases page.
Download dynamic scan site tree	Click  and select Download Site Tree . Select CSV or JSON for the file type.	
View dynamic	Click  and select Detected Hosts . Detected hosts are	

Task	Action	Notes
scan detected hosts	hosts that are referenced by the application but are not specified as allowed hosts.	
Download login macro used in dynamic scan	Click ... and select Download Login Macro .	Login macro is available for the following scan types: DAST Automated Website, Dynamic, Dynamic+
Download scan log for failed dynamic scan	Click ... and select Download Scan Log .	Scan log is available for DAST Automated scan.
Submit Debricked scan on SBOM	Click ... and select Send to Debricked . The SBOM must be available for download.	
Delete an imported scan	Click ... and Cancel Imported Scan . See "Deleting an Imported Scan" on page 359 .	
Create a WAF export file	<p>Note: Contact support to enable the WAF feature.</p> Click ... and select Send to WAF/IPS . The export is an XML file.	

Note: The duration of availability for downloads is set by the ["Data Retention Policy" on page 380](#).

Filtering Your Scans page

You can limit the scans displayed on Your Scans page by applying filters. Filtering is only available at the tenant-level view.

Note: A filter only appears in the filter list when the results contain multiple values for that filter.

To filter Your Scans page:

1. Navigate to Your Scans Page (see "[Viewing All Scans](#)" on page 167).
2. Click ▼ to display the filter list if it is not currently displayed.
3. Expand the filters that you want to apply.
4. Select your desired filter values. The following table describes the available filters.

Filter	Description	Values
Started on	Date range in which scans were started	
Completed on	Date range in which scans were completed	
Assessment type	Assessment type of the scan	
Entitlement Type	Entitlement type of the scan	Single Scan, N/A, Subscription, Remediation
Is Remediation	Whether the scan is a remediation scan	False, True
Release	Release associated with the scan	
Scan Status	Status of static, dynamic, mobile, and network scans	In Progress, Completed, Canceled, Waiting
Scan Type	Scan type	Static, Dynamic, Mobile, Network, Open Source, Application Monitoring

Your Scans page automatically refreshes with your filtered results. Applied filters are shown at the top of the page.

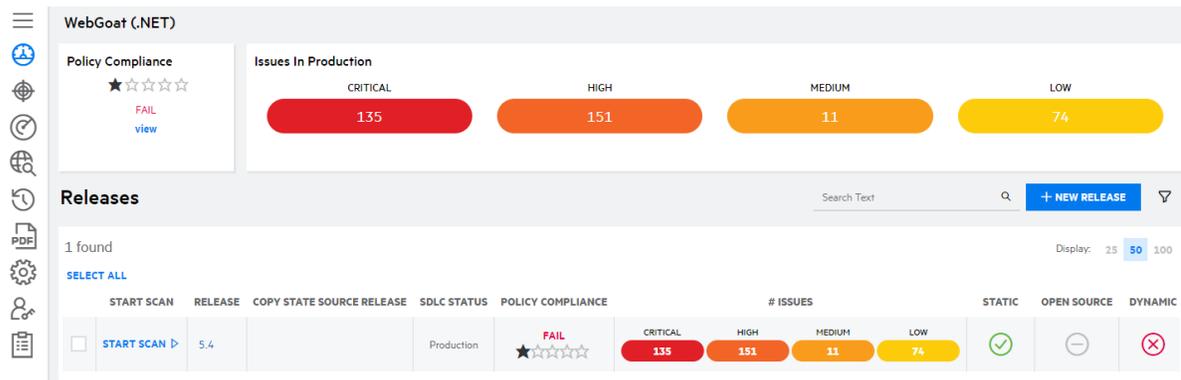

Checking the Scan Status

Release owners, scan submitters, and users on an application's notification list receive email notifications of the following scan status updates to an application: scan start, scan completion, scan cancellation, scan pause. You can also check the scan status in the portal.

To check a scan status for an application:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application for which you want to check the scan status.

The Application Overview page appears.

3. Hover over a scan status icon to view a tooltip with additional information about the most recent scan of that type across releases.
4. Click a status icon to directly access the scan status details:
 - Not Started: you are redirected to the relevant Scan Setup page.
 - Scheduled: you are redirected to the relevant Scan Setup page.
 - In Progress: you are redirected to the Release Scans page or the Application Scans page if a microservice application has queued static scans.
 - Queued: you are redirected to the relevant Scan Setup page.
 - Paused: you are redirected to the Help Center Tickets window on the Release Scans page.
 - Canceled: you are redirected to the relevant Scan Setup page.
 - Completed: you are redirected to the Release Issues page (static, dynamic, and mobile scans) or the Application Issues page (Application Monitoring scans), filtered by the relevant scan type.

Note: DAST Automated and Debricked scans can have partial results; the scan status icon for completed scans that have partial results is highlighted in orange;

Canceling a Scan

You might need to cancel a scan that has not been started or has been started but has not been completed. The portal automates processing of the cancellation request. The entitlement cost will be refunded if a refund is deemed appropriate.

To cancel a scan:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application for which you want to cancel a scan.
The Releases page appears.
3. Click **Scans**.

The Application Scans page appears.

RELEASE	SCAN TYPE	ASSESSMENT TYPE	ENTITLEMENT TYPE	STATUS	STARTED	COMPLETED	# ISSUES
S.4	Dynamic	Dynamic Express	Subscription	✗	2017/11/10	2019/05/06	
S.4	Dynamic	Dynamic Premium	N/A	✗	2016/05/13	2017/07/19	
S.4	Static	Static Basic	N/A	✓	2016/05/13	2016/05/13	34 Critical, 67 High, 0 Medium, 7 Low, 108 Total
S.4	Dynamic	Dynamic Premium	N/A	✓	2016/05/13	2016/05/13	101 Critical, 84 High, 11 Medium, 67 Low, 300 Total

4. Click **...** in the row of the scan and select **Cancel Scan**.

A confirmation message displays.

5. Click **Yes** to confirm the scan cancellation.

- For a scan with a **Queued** or **Scheduled** status, the scan is automatically canceled.
- For a scan with an **In Progress** status:
 - If the scan is an application monitoring scan or static scan that has not been audited, it is automatically cancelled.
 - If the scan is a dynamic scan, mobile scan, or static scan under audit, a Help Center ticket is generated that includes the cancellation request and scan details. An email is sent to the testing team, who then manually cancels the scan.
- For a scan with a **Waiting** status, the scan is automatically canceled. An email is sent to the testing team.

Once a scan is cancelled, any Help Center tickets associated with the scan are marked as solved.

Resuming a Paused Scan

The testing team will pause a scan if additional information is needed. Respond to the associated Help Center ticket so the scan can be resumed. Note that pausing and resuming testing causes the scan to take longer than the standard SLO.

Note: Scans that have been paused for more than 21 consecutive days are automatically canceled. Any Help Center tickets associated with the scan are marked as solved.

To resume a paused scan:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the paused status icon in the **Scan & Security Status** column of the application.
The Help Center tickets window appears.
3. Click the **Pending Tickets** section.
Pending tickets for the scan appears.
4. Click a ticket to view its comments.

5. Click **Add Public Comment**.

A text box appears below.

6. Type a comment that will be added to the ticket.
7. Click **+ Add Public Comment**.

The comment is added to the ticket details in both the portal and Help Center. Your assessment's status then reverts to **In Progress**.

Note: If you need to add an attachment to the ticket, you must do it through the Help Center.

Viewing Help Center Tickets Linked to a Scan

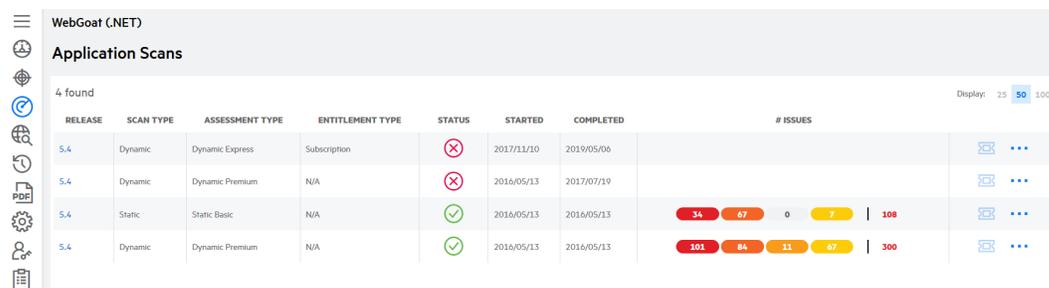

You can directly view Help Center tickets linked to an active scan from the Your Scans, Application Scans, and Release Scans pages.

Note: If a scan has been paused, you can access associated Help Center tickets from any release-level page by clicking the **Help Center Tickets** button located in the status bar.

To view Help Center tickets linked to an active scan:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application.
3. Click **Scans**.

The list of all scans ran against the application or release appears.

RELEASE	SCAN TYPE	ASSESSMENT TYPE	ENTITLEMENT TYPE	STATUS	STARTED	COMPLETED	# ISSUES
S.4	Dynamic	Dynamic Express	Subscription	⊗	2017/11/10	2019/05/06	
S.4	Dynamic	Dynamic Premium	N/A	⊗	2016/05/13	2017/07/19	
S.4	Static	Static Basic	N/A	⊙	2016/05/13	2016/05/13	34 67 0 7 108
S.4	Dynamic	Dynamic Premium	N/A	⊙	2016/05/13	2016/05/13	101 84 11 67 300

4. Click the  icon.

The Help Center modal window opens, displaying all pending, open, and solved tickets associated with the scan.

The screenshot shows the 'Help Center Tickets' interface. On the left, there is a sidebar with a 'Pending Tickets' section containing one ticket. The main area displays the details for 'Ticket: 70' titled 'Assessment Waiting for Customer Action', which has a status of 'pending'. Below the title, there is a link to 'Add Public Comment'. The ticket history shows three messages from 'Dylan Thomas':

- 2016/07/19 08:49:02 AM:** Quick feedback!
- 2016/07/19 06:23:04 AM:** I swear they work! But I'm such a great customer, I'll update them anyway. Sincerely, Happy FoD customer
- 2015/08/25 06:42:33 PM:** Assessment for Drupal - 7.25 is waiting for customer meaning we are having issues accessing the site properly. Assessment Type: Dynamic Tenant: Dylan Tenant Notes: The scan of your application has been paused because the credentials provided are not working. Please verify the credentials and notify the Help Center with the updated information so we may complete your scan. To chat with an FoD representative or log a support ticket, visit the FoD Help Center link on the FoD portal. For immediate assistance, use the Help Center Voice Channel (800)893-8141. Without your response, your scan may be cancelled. We would appreciate it if you could log in and help us resolve the issues. You can access the Assessment by going to [HTTPS://FODQA9-IIS2/Releases/Issues/1621](https://FODQA9-IIS2/Releases/Issues/1621) Thanks, HP Security Services

5. In the Pending tickets section, click a ticket to view its comments.
6. Click **Add Public Comment**.
A text box appears below.
7. Type a comment that will be added to the ticket.
8. Click **+ Add Public Comment**.
The comment is added to the ticket details in both the portal and Help Center.

Chapter 5: Remediating Vulnerabilities

When the testing team completes the scan, it publishes the scan results in the portal. Log in to Fortify on Demand to view your scan results and remediate vulnerabilities found in your application.

This section contains the following topics:

- [Reviewing Issues](#)176
- [Issue Details](#)186
- [Updating Issues](#)199
- [Auditing Issue Remediation](#)206
- [Audit and Remediation with Fortify Aviator](#)208
- [Audit Templates](#)211
- [Dataflow Cleanse Rules](#)220
- [Requesting a Remediation Scan](#)226

Reviewing Issues

You can view detailed information about the issues that were found in a scan at both the application and release levels. The Application Issues page displays issues found across all releases of an application (excluding retired releases) as well as Application Monitoring issues. The Release Issues page displays issues found across all scans of a release.

The Application Issues and Release Issues pages, sharing a similar layout and functionality, provide a single, consolidated view of issue data. A page is split into three panels:

- The navigation panel displays a list of the issues. Issues are organized by severity, with a tab for each severity level and a tab for all issues.
- The issue details panel displays details of the issue selected in the navigation panel. Details are organized among several tabs. The tabs that are available depend on the scan type in which the issue was found.
- The audit panel is collapsible. It displays user-remediation fields of the issue selected in the navigation panel as well as the issue status, the date the issue was introduced, and the date the issue was last found.

Issues have one of the following statuses:

Status	Description
New	A vulnerability appeared for the first time in the latest scan.

Status	Description
Existing	A vulnerability in the latest scan has appeared in one or more previous scans, including the one immediately preceding the latest one.
Reopen	A vulnerability appeared in the latest scan and has appeared previously, but not in the scan immediately preceding the latest one. In other words, the issue appeared, then did not appear in one or more scans, thereby seeming to be fixed, and then later came back again.
Fixed/Fix Validated	A vulnerability appeared at least once previously, but it was not identified in the latest scan. By default, Fortify on Demand doesn't show Fixed vulnerabilities—only issues from the most recent scan of a given type. To see Fixed vulnerabilities, select Show... Fixed on the Release Overview and Issues pages.

This section contains the following topics:

Viewing Application Issues	177
Viewing Release Issues	178
Navigating the Issues Page	179
Filtering the Issues Page	182
Customizing Issue Filters and Groupings	184

Viewing Application Issues

You can view issues from all releases (excluding retired releases) of an application, along with Application Monitoring issues.

To view issues at the application level:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application that you want to view.
The Application Overview page appears.
3. Click **Issues**.
The Application Issues page appears. Within a grouping, issues are sorted by file name, then line

number. Issues with the same instance ID across multiple releases are combined in a single view.

The screenshot displays the Fortify Application Issues interface. The main header shows 'Application Issues' with a search bar and a 'SHOW' button. Below the header, there are navigation tabs for 'Vulnerability', 'Recommendations', 'HTTP', 'More Evidence', and 'History'. The current view is 'Vulnerability'. The main content area shows a summary of a vulnerability: 'A Unicode conversion Cross-Site Scripting (XSS) vulnerability was found. This vulnerability is due to an input validation error in the filtration of special HTML characters supplied as Unicode characters. If exploited, an attacker could craft a malicious link containing arbitrary HTML or script code to be executed in a user's browser. Recommendations include modifying the web.config file to use only Unicode code page for output or filtering full-width ASCII characters from all non-trusted data sources.' The interface also includes a sidebar with a list of files, a right-hand panel with 'Audit' details (Status: New, Introduced Date: 2016/05/13, Last Found Date: 2016/05/13, Assigned User: Huang, You (Huang), Developer Status: Open, Auditor Status: Pending Review, Severity: Critical), and a bottom panel with 'Standards and Best Practices' (OWASP 2021, OWASP 2017, OWASP 2014 Mobile Top 10, PCI 3.2).

Viewing Release Issues

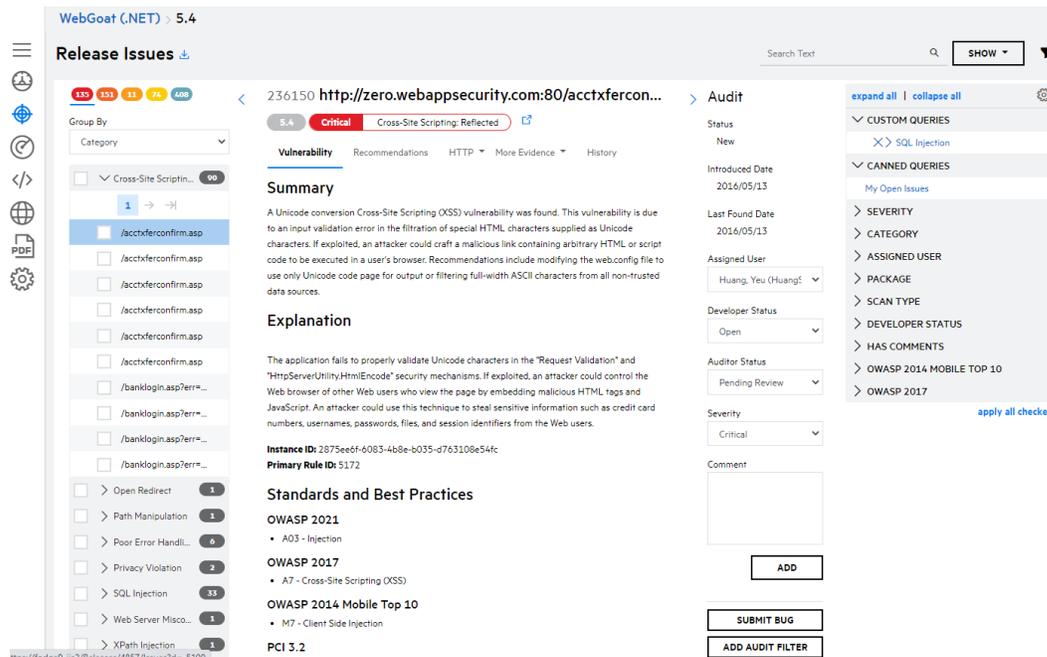

You can view issues from a release of an application, including open source scan issues and on-premises scan issues.

To view issues at the release level:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears.
3. Select a release from your list.
4. Click **Issues**.

The Release Issues page appears. Within a grouping, issues are sorted by file name, then line

number.

Navigating the Issues Page

The following tables describe how to navigate the Application Issues and the Release Issues pages.

General Navigation

Task	Action
Export issue data	Click ↓ . A link to download a CSV file is sent to the email address specified in your account settings. The link is valid for 7 days from the time the email is sent and can only be accessed by you. Note: The Export functionalities in the Tenant Dashboard, Your Releases, Application Issues, and Release Issues pages output the same column fields. Currently applied filters are also applied to the export.
Search issues	Type a keyword or phrase in the search text field and press Enter .
Hide or display the filter list	Click ▼ .
Show or hide	Click Show... Fixed to switch between showing and hiding Fix Validated issues.

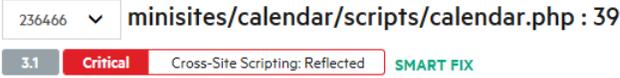

Task	Action
fixed issues	
Show or hide suppressed issues	Click Show... Suppressed to switch between showing or hiding Suppressed issues.
Save applied filters as query	Click Save Query .
Remove applied filters	Click X or Clear Filters .

Navigation Panel

Task	Action
Expand or collapse the panel	Click > or < .
View issues by severity level	Select one of the following tabs: Critical, High, Medium, Low, All .
Group displayed issues by an attribute	Select a value from the Group By list. Within a group, issues are sorted by filename and then line number.
View more details about an issue	Click the issue description.
Select multiple issues	Select the check boxes next to issues.
Cycle through issues in a group	Click the right and left arrows ←→ .

Issue Details Panel

Task	Action
View a specific instance of an issue found in multiple releases	Select the issue ID, specific to a release, from the drop-down list. The issue details panel on the Release Issues page defaults to the

Task	Action
	<p>issue specific to that release.</p> 
View analysis trace diagram of an issue along with others in the same category.	Click the Smart Fix link. A full screen view of Smart Fix appears that displays all issues in the selected issue's category, highlighting the selected issue's data flow.
View specific details of an issue	Select a tab. For more information, see "Issue Details " on page 186

Audit Panel

Task	Action
Expand or collapse the panel	Click > or <.
Edit an issue	Edit the available fields. For more information, see "Updating Issues" on page 199 .
Submit an issue to a bug tracker	Click Submit Bug . For more information, see "Submitting Issues to the Bug Tracker" on page 351 .
Add an audit filter for an issue	Click Add Audit Filter . For more information, see "Creating an Application Audit Template Filter for an Issue" on page 217 .

Filter List

Task	Action
Expand or collapse filters	Click  or the arrow next to the filter name.
Apply a filter	Select a filter value. Click Apply if applicable. For more information, see "Filtering the Issues Page" on the next page .
Customize filter and grouping selections	Click  . For more information, see "Customizing Issue Filters and Groupings" on page 184

Filtering the Issues Page

You can limit the issues displayed on the Application Issues page or the Release Issues page by applying filters.

To filter the Issues page:

1. Click ▼ to display the filter list if it is not currently displayed.
2. Expand the filter(s) you want to apply.
3. Select the filter values that you want to filter for. The following table describes issue filters and their values.

Note: A filter only appears in the filter list when the results contain multiple values for that filter.

Filter	Description	Values
Assigned User	User defined	Not Set, User-defined
Auditor Status	Auditor issue remediation status. For more information, see "Audit Workflow for Auditors" on page 206 .	Pending Review, Remediation Required, Remediation Referred, Risk Mitigated, Risk Accepted Not an Issue
Bug Submitted	Issue was submitted as a bug to a bug tracker.	False, True
Category	Issue category	
Canned Queries	Default queries	My Open Issues
Custom Queries	User-defined queries	User-defined
Developer Status	Developer issue remediation status.	Challenged, Open, IN Remediation, Remediated, Will Not Fix, Third Party Component
DISA STIG 4.11	DISA Application Security and Development STIG v4.11	

Filter	Description	Values
DISA STIG 5.1	DISA Application Security and Development STIG v5.1	
Has Attachments		False, True
Has Comments		False, True
Has Notes		False, True
Introduced Date	Original date of issue creation	
Is Suppressed		False, True
Issue Age	Number of days the issue has been present in the application. The categories are cumulative. For example, an issue that is counted as greater than 30 days old is also part of the count for greater than 10 days old.	>/< 5 days, >/< 10 days, >/< 30 days, >/< 60 days, >/< 45 days, >/< 90 days
OWASP 2013	OWASP top 10 2013 classification	
OWASP 2014 Mobile	OWASP mobile top 10 2014 classification	
OWASP 2017	OWASP top 10 2017 classification	
OWASP 2021	OWASP top 10 2021 classification	
OWASP ASVS 4.0	OWASP ASVS 4.0 classification	
Package		
Release	<p>Note: The Release filter appears only on the Application Issues page.</p> <p>Release in which the issue was identified</p>	
Scan Tool	Scan tool used to find issue	DAST, SAST, MAST, Debricked, Sonatype

Filter	Description	Values
Scan Type	Scan type to which issue belongs	Application Monitoring, Dynamic, Static, Mobile, Open Source
Severity	Issue severity	Critical, High, Medium, Low, Best Practice, Info
Status	Issue status	New, Existing, Reopen, Fixed/Fix Validated
<Custom issue attribute>	Issue attributes that are picklists	User-defined

The Issues page automatically refreshes with your filtered results. Applied filters are shown at the top of the page.

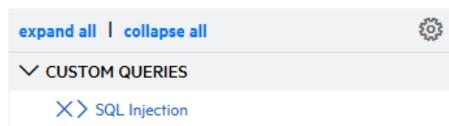

4. To save the currently applied filters for reuse, click **Save Query**.

The Name Your Custom Query window opens.

5. Type a name for the query and click **Save**.

Your saved custom query appears in the **Custom Queries** filter. You can reapply the query at any time by selecting the query from the filters list.

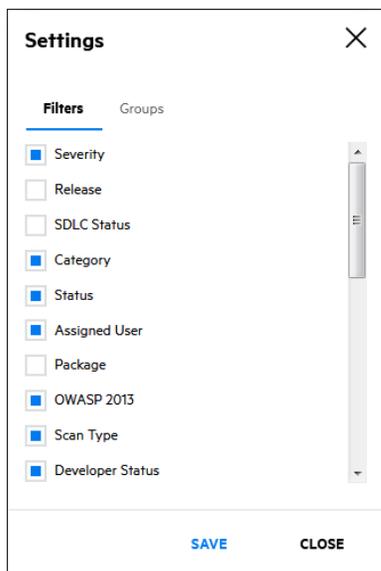

Customizing Issue Filters and Groupings

You can customize issue filters and groupings on the Application Issues or Release Issues page.

To customize issue filters and groupings:

1. In the audit panel, click .

The Settings window appears.

2. Perform the relevant task:

Task	Procedure
Customize issue filters	<ol style="list-style-type: none"> Select the Filters tab. Select the check boxes next to filters you want to add. Deselect the check boxes next to filters you want to remove. Click Save. <p>The Issues page refreshes with the new filters in the filters list.</p> <div style="background-color: #f0f0f0; padding: 5px; border: 1px solid #ccc;"> <p>Note: A filter only appears in the filter list when the results contain multiple values for that filter.</p> </div>
Customize issue groupings (Group By options in the navigation panel)	<ol style="list-style-type: none"> Select Groups. Select the check boxes next to values you want to add to the Group By list. Deselect the check boxes next to values you want to remove from the Group By list. Click Save. <p>The Issues page refreshes with the new group values.</p>

Issue Details

The issue details panel on the Application Issues or Release Issues page provides comprehensive issue details that help you analyze the vulnerabilities found in the application. The details are organized among several tabs. The available tabs depend on the scan type in which the issue was found.

This section covers the following topics:

Static Scan Issue Details	186
Open Source Scan Issue Details	189
Dynamic/Application Monitoring Scan Issue Details	193
Mobile Scan Issue Details	197

Static Scan Issue Details

The issue details panel for a static scan issue displays the issue ID, issue location, issue severity, and issue category across the top. Several tabs below provide additional information about the issue, including technical details, line of code (if source code was submitted), and an analysis trace diagram.

Vulnerability

The **Vulnerability** tab displays the following technical details about the issue: issue summary; explanation of the execution and implications of the issue; instance ID and rule ID; and standards and best practices information from Fortify Software Security Research.

5.4 Critical Open Redirect SMART FIX

Vulnerability Recommendations Code Diagram More Evidence History

Summary

The file **CustomerLogin.aspx.cs** passes unvalidated data to an HTTP redirect on line **72**. Allowing unvalidated input to control the URL used in a redirect can aid phishing attacks. Allowing unvalidated input to control the URL used in a redirect can aid phishing attacks.

Explanation

Redirects allow web applications to direct users to different pages within the same application or to external sites. Applications utilize redirects to aid in site navigation and, in some cases, to track how users exit the site. Open redirect vulnerabilities occur when a web application redirects clients to any arbitrary URL that can be controlled by an attacker.

Attackers may utilize open redirects to trick users into visiting a URL to a trusted site and redirecting them to a malicious site. By encoding the URL, an attacker is able to make it more difficult for end-users to notice the malicious destination of the redirect, even when it is passed as a URL parameter to the trusted site. Open redirects are often abused as part of phishing scams to harvest sensitive end-user data.

In this case, the URL the client will be redirected to is accepted at **get_QueryStringO** in **CustomerLogin.aspx.cs** at line **67**.

The data is sent at **RedirectO** in **CustomerLogin.aspx.cs** at line **72**.

Example 1: The following code instructs the user's browser to open a URL parsed from the **dest** request parameter when a user clicks the link.

```
String redirect = Request["dest"];  
Response.Redirect(redirect);
```

Recommendations

The **Recommendations** tab displays recommendations to remediate the issue, along with tips and references for further research. If available, the **Interactive Training** section contains links to interactive training for the issue category, video about the issue category, and other educational resources. The **Interactive Training** section is powered by Secure Code Warrior. For more information about Secure Code Warrior, see "[Secure Code Warrior Integration](#)" on page 360.

5.4 **Critical** Open Redirect [SMART FIX](#)

Vulnerability **Recommendations** Code Diagram More Evidence ▾ History

Recommendation

Unvalidated user input should not be allowed to control the destination URL in a redirect. Instead, use a level of indirection: create a list of legitimate URLs that users are allowed to specify and only allow users to select from the list. With this approach, input provided by users is never used directly to specify a URL for redirects.

Example 2: The following code references an array populated with valid URLs. The link the user clicks passes in the array index that corresponds to the desired URL.

```
String redirect = Request["dest"];
Int32 strDest = System.Convert.ToInt32(redirect);
if((strDest >= 0) && (strDest <= strURLArray.Length -1 ))
{
    strFinalURL = strURLArray[strDest];
    pageContext.forward(strFinalURL);
}
```

In some situations this approach is impractical because the set of legitimate URLs is too large or too hard to keep track of. In such cases, use a similar approach to restrict the domains that users can be redirected to, which can at least prevent attackers from sending users to malicious external sites.

Tips

1. A number of modern web frameworks provide mechanisms for performing validation of user input. ASP.NET Request Validation and WCF are among them. To highlight the unvalidated sources of input, the HP Fortify Secure Coding Rulepacks dynamically re-prioritize the issues reported by HP Fortify Static Code Analyzer by lowering their probability of exploit and providing pointers to the supporting evidence whenever the framework validation mechanism is in use. In case of ASP.NET Request Validation, we also provide evidence for when validation is explicitly disabled. We refer to this feature as Context-Sensitive Ranking. To further assist the HP Fortify user with the auditing process, the Fortify Security Research Group makes available the Data Validation project template that groups the issues into folders based on the validation mechanism applied to their source of input.

Code

The **Code** tab displays the specific code where the issue was found. Users can perform the following actions to more easily review code:

- Enable or disable word wrap
- Cycle through multiple analysis traces, if applicable
- Switch between a stacked view of the code and tree view of the analysis trace alongside the code
- Jump to the line of code when selecting an analysis trace node in the tree view
- Enable and disable showing the inline analysis trace

Note: To view all issues in the selected issue's category, click the **Smart Fix** link.

[VIEW ALL ISSUES](#)

Open Source Community Health

Community health is an important consideration when assessing current and future risk of using open source projects in your application. Open Source Select helps developers start left and choose smarter open source. Application teams should continuously review the health of their open source dependencies and consider alternatives to projects with low Contributor, Popularity, and/or Security scores.

[Click here for more details.](#)

Dependencies (Debricked, CycloneDX)

The **Dependencies** tab displays a visualized dependency tree for the vulnerable component. A dependency tree appears for each root node (direct dependency) that contains the vulnerable component.

Note: Dependency trees are not available for SBOMs without dependency details and the `debricked.fingerprints.txt` file.

Fortify recommends reviewing the dependency tree and using the root fix solution to resolve the issue. A root fix contains the next version of the direct dependency that does not contain a vulnerable version of the affected dependency. In simpler terms, the root fix is a solution to a dependency vulnerability that starts at the root of the dependency tree. For more information on using root fix, see [How do I manually solve a vulnerability with the Root fix solution?](#).

- For an issue found in different lock files, selecting a lock file from the drop-down list displays the full path of the selected lock file.
- A dependency tree can be expanded and collapsed.
- Vulnerable nodes are marked in red.
- The number of dependency trees displayed are the number of root nodes that have a known safe version or are lockfile-only fixes. A lockfile-only fix means that you can regenerate the lockfile in your repository and the vulnerability will be resolved. You do not need to update the direct dependency; instead reinstall the same version (for example: run yarn update and generate a new yarn.lock file).

Recommendations

HTTP ▾

More Evidence ▾

History

Summary

A Unicode conversion Cross-Site Scripting (XSS) vulnerability was found. This vulnerability is due to an input validation error in the filtration of special HTML characters supplied as Unicode characters. If exploited, an attacker could craft a malicious link containing arbitrary HTML or script code to be executed in a user's browser. Recommendations include modifying the web.config file to use only Unicode code page for output or filtering full-width ASCII characters from all non-trusted data sources.

Explanation

The application fails to properly validate Unicode characters in the "Request Validation" and "HttpServerUtility.HtmlEncode" security mechanisms. If exploited, an attacker could control the Web browser of other Web users who view the page by embedding malicious HTML tags and JavaScript. An attacker could use this technique to steal sensitive information such as credit card numbers, usernames, passwords, files, and session identifiers from the Web users.

5.4 **Critical** Cross-Site Scripting: Reflected 

Vulnerability **Recommendations** HTTP  More Evidence  History

Recommendation

For Security Operations:

No patch is currently available.

Modify the web.config file to use only Unicode code page for output. To do this, add the following lines to your web.config file:

```
<configuration>
  <system.web>
    <globalization responseEncoding="utf-8" />
  </system.web>
</configuration>
```

If you cannot use Unicode, have your developers to filter full-width ASCII characters from all non-trusted data sources, such as user input, HTTP headers, some components output, and other data.

For Developers:

Have your Security Operations modify the web.config file to use only Unicode code page for output.

If your application cannot use Unicode, you must filter full-width ASCII characters from all non-trusted data sources, such as user input, HTTP headers, some components output, and other data.

HTTP

The **HTTP** tab displays the content, headers, and parameters of the request and response, which are accessed separately through the drop-down menu.

Available for Application Monitoring issues, the **Evidences** section lists the complete session traffic that found the issue.

Updating Issues

Using the information provided in your scan results, remediate the vulnerabilities that were found. You can update issues at both the application and release levels for the purpose of tracking remediation efforts.

This section contains the following topics:

Editing an Issue 200
Editing Multiple Issues 201
Uploading Screenshots 205

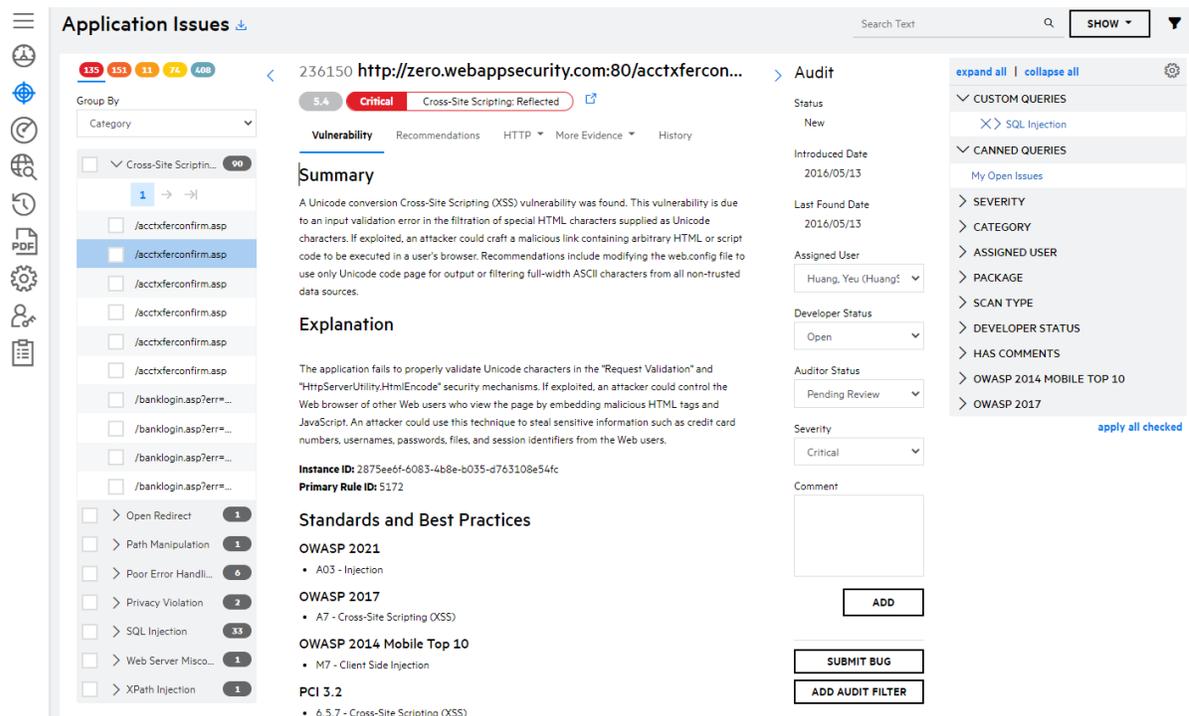

Editing an Issue

You can edit issues on both the Application Issues and the Release Issues pages. Users with the Edit issues permission can edit an issue's developer status and assigned user. Users with the Audit permission can also edit an issue's auditor status and severity.

To edit an issue:

Note: The following instructions describe how to edit an issue on the Application Issues page. Selecting and updating issues works the same way on the Release Issues page.

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application with issues that you want to edit.
The Application Overview page appears.
3. Click **Issues**.

The Application Issues page appears.

4. In the navigation panel, select the issue that you want to edit. If the issue is found in multiple releases, select a specific instance by selecting the issue ID, which is specific to the release, from the drop down list in the issue details panel.

5. In the audit panel, edit the fields as needed.

Field	Description
Assigned User	Select the user to be assigned the issue
Developer Status	Select the issue's development status. The default value is Open . Statuses fall under an open or closed state. <ul style="list-style-type: none">• If you are reviewing the issue, select In Remediation.• If you have remediated the issue, select Remediated.• If you have decided not to remediate the issue, select Will Not Fix.• If the issue is in third-party code, select Third Party Component.
Auditor Status	Select the issue's audit status. The default state is Pending Review . Statuses fall under a non-suppressed or suppressed state. <ul style="list-style-type: none">• Not Suppressed: Remediation Required, Remediation Deferred, Risk Mitigated• Suppressed: Risk Accepted, Not an Issue
Severity	Select a different severity to change the default issue severity.
Comment	Type any supporting comments in the Comment field and click Add .

6. Refresh the Issues page to see your issue changes.

Note: If an issue was suppressed, it is hidden on the Issues page and only appears when **Show... Suppressed** is selected.

["Submitting Issues to the Bug Tracker" on page 351](#)

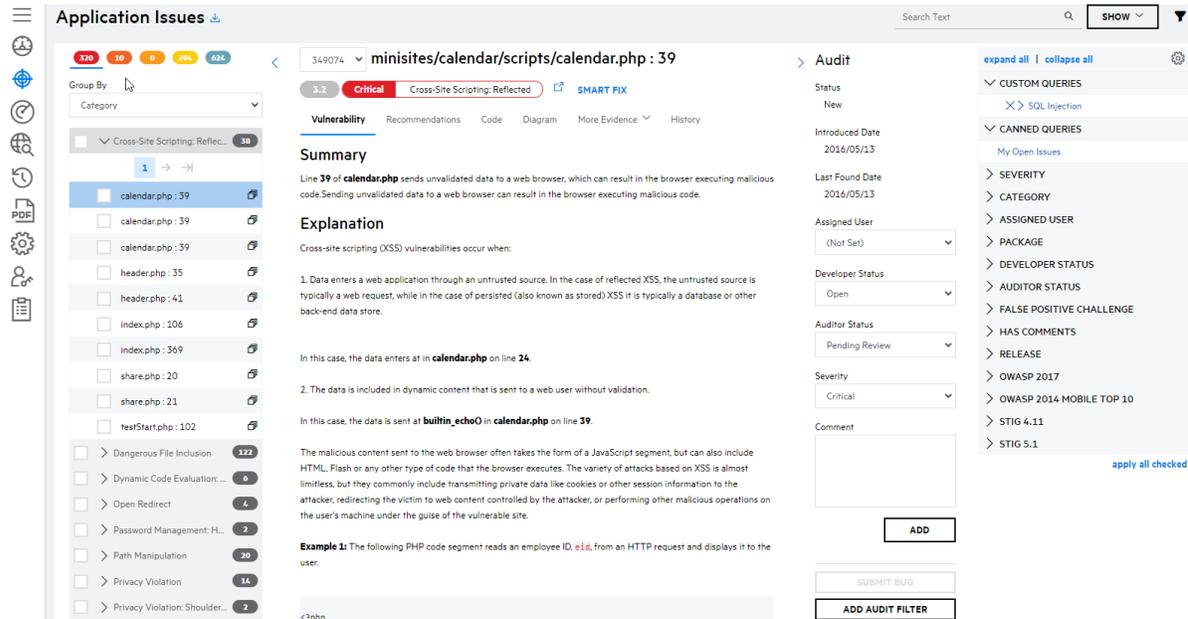

Editing Multiple Issues

You can bulk edit multiple issues on both the Application Issues and the Release Issues pages.

To edit multiple issues:

Note: The following instructions describe how to edit multiple issues on the Application Issues page. Selecting and updating issues works the same way on the Release Issues page.

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application with issues that you want to edit.
The Application Overview page appears.
3. Click **Issues**.

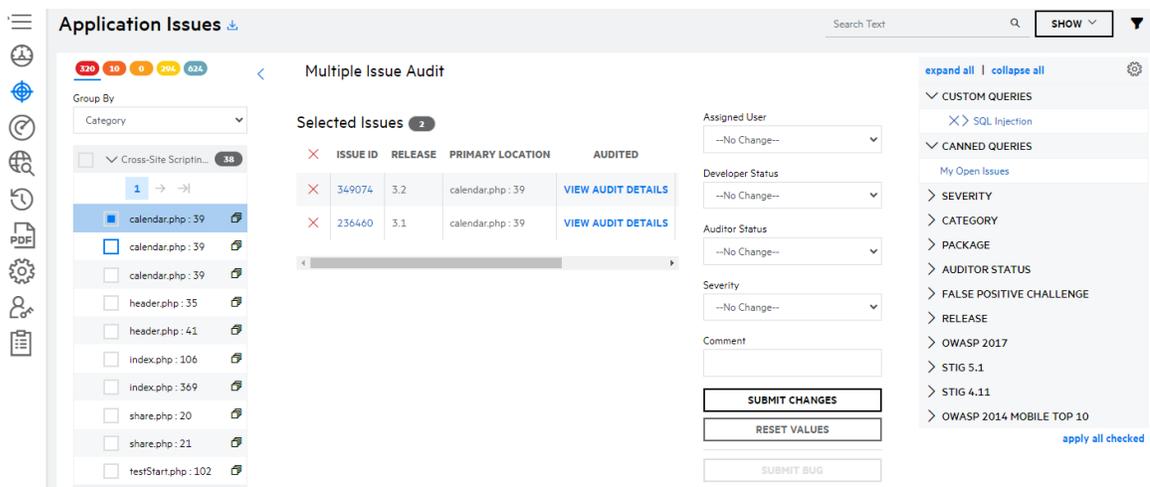

The Application Issues page appears.

4. Perform the following actions to select multiple issues:
 - In the navigation panel, select the check boxes next to the issues.

Note: On the Release Issues page, you can select the **Include Issues From Other Releases** check box to select all instances of the issue found in releases. Issues can be individually removed.

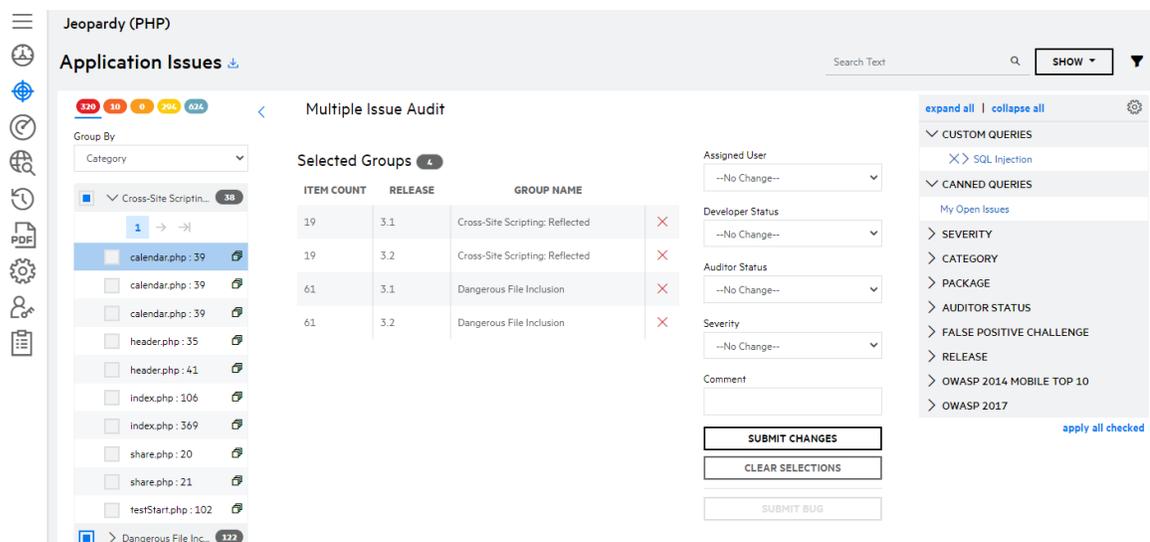

Multiple Issue Audit

Include Issues From Other Releases

- In the navigation panel, select the check box next to a group name to select all issues in the group.

Note: On the Release Issues page, you can select the **Include Issues From Other Releases** check box to select issues found in the same release as a separate group. Release groups can be individually removed.

5. Perform the following tasks to edit audit fields:

Task	Description
Manually edit audit fields	In the audit panel, edit the fields as needed. The following fields are available for editing: Assigned User , Developer Status , Auditor

Task	Description										
	Status, Severity, and Comments.										
Copy audit details from one issue to other issues	<p>a. In the issues panel, click View Audit Details in the row of the issue that you want to copy.</p> <p>The Issue ID window appears.</p> <div data-bbox="583 525 1187 1218" style="border: 1px solid black; padding: 10px;"><p>Issue ID: 236519</p><table border="0"><tr><td>Assigned User</td><td>Smith, James</td></tr><tr><td>Developer Status</td><td>Open</td></tr><tr><td>Auditor Status</td><td>Pending Review</td></tr><tr><td>Severity</td><td>Critical</td></tr><tr><td>Latest Comment</td><td>Comment</td></tr></table><hr/><p>Audit and Comment History SELECT ALL</p><ul style="list-style-type: none"><input type="checkbox"/> Yeu-Li.Huang@microfocus.com 2023/07/13 08:52:28 AM Comment<input type="checkbox"/> Yeu-Li.Huang@microfocus.com 2023/07/13 08:54:30 AM Changed user to 'SmithALead2'<hr/><p><input type="checkbox"/> Include Attachments The selected issue does not have any attachments.</p><p style="text-align: right;">COPY AUDIT DETAILS CANCEL</p></div> <p>b. Uploading Screenshots

You can upload screenshots for an issue through the Application Issues or Release Issues page.

- Supported file types are .jpg, .gif, and .png.
- Files must be no larger than 3 MB.

There are two methods for uploading a screenshot: upload a saved file or copy and paste the image into the modal window.

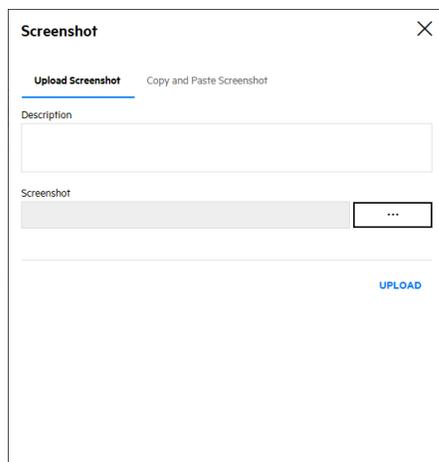

To upload a screenshot for an issue:

1. In the issues detail panel, select the **More Evidence** tab > **Screenshots**.

2. Click **+Add Screenshot**.

The Screenshot modal window appears.

3. Choose one of the following ways to upload the screenshot:

- To upload a file:
 - i. Select the **Upload Screenshot** tab.
 - ii. (Optional) Type a description of the file.

- iii. Click **...** and browse to and select a screenshot.
- iv. Click **Upload**.
- To copy and paste the screenshot:
 - i. Select the **Copy and Paste Screenshot** tab.
 - ii. (Optional) Type a description of the file.
 - iii. Copy an image to your clipboard.
 - iv. Select the box and press **Ctrl+V** to paste the image from the clipboard.
 - v. Click **Upload**.

The uploaded screenshot details and icons for viewing, saving, and deleting the screenshot appears in the tab.

Icon	Description
	View the screenshot in the browser.
	Open the screenshot or save it to your local system.
	Delete the screenshot.

Auditing Issue Remediation

Fortify on Demand enables an organization's development and security teams to audit issue remediation, where different user roles participate in the issue remediation workflow. Users with the **Edit Issues** permission, typically the development team, receive the issues and decide whether to remediate them or not. Users with the **Audit Issues** permission, typically the security team, validate the issues after the development team is finished and decide whether to suppress them or not. Users with the **View Issues** permission can view issues, but cannot make any changes.

This section contains the following topics:

Audit Workflow for Auditors	206
Audit Workflow for Developers	207

Audit Workflow for Auditors

The following procedures describes the typical workflow that a security team follows for assigning new issues and reviewing closed issues.

Auditors from the security team need the Audit issue permission, which allows editing of the **Auditor Status** and **Severity** fields.

Assigning a New Issue

A new issue arrives in the queue with the following default values:

- **Developer Status: Open**
- **Users: (Not Set)**
- **Auditor Status: Pending Review**
- **Severity:** Fortify on Demand-ranked default

The security team reviews the issue and assigns it to a developer for remediation.

To assign a new issue to a developer for remediation:

1. Review an issue that has the **Developer Status** set as **Open**.
2. If needed, select a different issue severity from the **Severity** list. For more information on issue severity, see "[Priority Order](#)" on page 19.
3. Select the developer to be assigned the issue from the **User** list.

Reviewing Closed Issues

After working on the issue, the developer changes the **Developer Status** to a closed state (**Remediated, Will Not Fix, Third Party Component**). The issue then returns to the security team issue queue for auditing.

To review a closed issue:

1. Audit the change made to the closed issue.
2. Based on your assessment of the change, decide whether to suppress or not suppress the issue and select the corresponding reason from the **Auditor Status** list.
 - Not Suppressed: **Remediation Required, Remediation Deferred, Risk Mitigated**
 - Suppressed: **Risk Accepted, Not an Issue**
3. If you selected **Remediation Required**, reassign the issue to a developer.
4. Add any supporting comments.

Audit Workflow for Developers

The following procedures describe the typical workflow a development team follows for remediating and closing an issue.

Developers from the development team need the Edit issue permission, which allows editing of the **Developer Status** and **User** fields.

Remediating an Issue

The security team assigns an open issue to a developer for remediation.

To remediate an issue:

1. Set the **Developer Status** to **In Remediation**.
2. Review the issue and perform one of the following actions:

- Remediate the issue.
- Do not remediate the issue.

Closing an Issue

To close an issue:

1. Once you have finished working on the issue, set the **Developer Status** to **Remediated, Will Not Fix**, or **Third Party Component**.
The issue is closed at this point.
2. Add any supporting comments.
3. Select the auditor to review the issue from the **User** list.

Audit and Remediation with Fortify Aviator

The Fortify Aviator service leverages Generative Artificial Intelligence (GAI) with the Claude 3 Sonnet Large Language Model (LLM) to audit results and provide enhanced remediation guidance. Remediation guidance consists of comments added to scan results and includes code snippets.

Fortify Aviator is applied to scan results after the initial Fortify Audit Assistant audit. Fortify Aviator content is added to the scan results and imported to Fortify on Demand. The content is available in the portal and API.

Availability

- Fortify Aviator is available in the AMS and APAC data centers.
- Fortify Aviator is available for static assessments with Automated audit.

Coverage

- For details on supported technology stacks, categories, and file types, see the Fortify Aviator article in the Zendesk Help Center.
- In the case of exceptionally large scan results and/or scan results with an exceptionally large number of issues in one category, Fortify Aviator might be restricted to a subset of the issues.

Audit and Remediation Guidance

Fortify Aviator actions appear in the **History** tab of the issue details panel on the Issues pages. Audit actions appear as updates to the **Auditor Status**; notes appear as comments:

- False positives are marked as **Not an Issue** and automatically suppressed.

Issue found in scan 60068 of release 1.0_WITH_AVIATOR.

Fortify Aviator 2024/07/05 07:35:57 AM
Changed Auditor Status from 'Pending Review' to 'Remediation Required'

Fortify Aviator 2024/07/05 07:35:57 AM
The code is vulnerable to SQL injection because it constructs a SQL query by concatenating user input (username and password) directly into the query string. This allows an attacker to inject malicious SQL code that could modify the intended query or execute arbitrary SQL commands.

To fix this vulnerability, the code should use a prepared statement with parameter binding instead of string concatenation. Here's how the code can be modified:

In file `src/main/java/com/fortify/aviator_fod_demo/HomeController.java`, replace lines 44-47 by the following lines:

```
String query = "SELECT 1 FROM users WHERE username = ? AND password = ?";
try (PreparedStatement stmt = connection.prepareStatement(query)) {
    stmt.setString(1, username);
    stmt.setString(2, password);
    try (ResultSet rs = stmt.executeQuery()) {
        credentialsCorrect = rs.next();
    }
}
```

- Issues in unsupported categories remain as **Pending Review**.

Audit Templates

Audit templates allow audit decisions to be systematically applied to static, dynamic, mobile, and open source scans. An audit template consists of custom filters that either suppress issues or change issue severity across all scans of the specified type.

An audit template can be created for each scan type at the global and application levels. Security Leads can manage global audit templates; users with the **Audit Issues** permission can manage audit templates for applications to which they have access.

Important! Audit template is an advanced feature and can lead to significant changes in vulnerability metrics and reporting. Fortify strongly recommends that you review the documentation before using audit templates. If you have additional questions, contact the support team.

This section contains the following topics:

Creating a Global Audit Template	211
Creating an Application Audit Template	214
Creating an Application Audit Template Filter for an Issue	217
Audit Template Usage and Examples	219

Creating a Global Audit Template

Security Leads can manage global audit templates. Global audit templates apply to all scans of the specified type across the tenant.

Audit templates are subjected to the following conditions:

- Audit template filters are case insensitive.
- Newly created or modified audit template filters are applied to scans published moving forward.

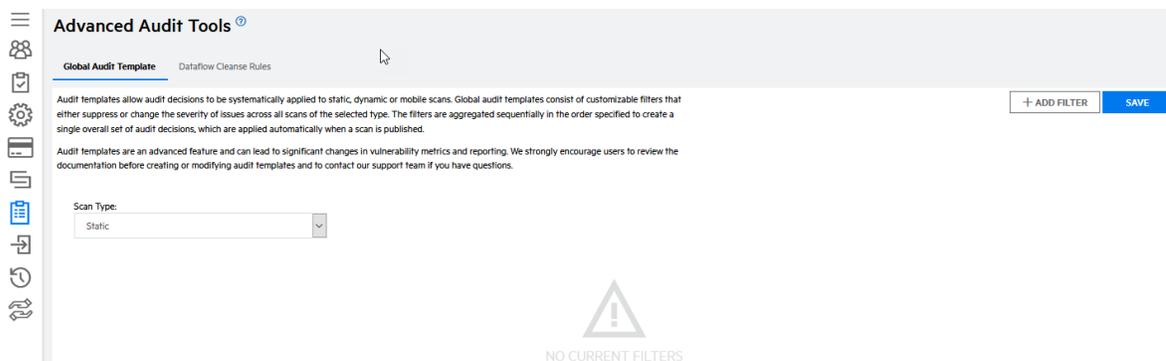

To create a global audit template:

1. Select the **Administration** view.

The User Management page appears.

2. Click **Audit Tools**.

The Advanced Audit Tools page appears.

3. On the **Global Audit Template** tab, select the scan type to which the global audit template will be applied from the **Scan Type** list.
4. Perform the following steps to add a filter. You can add multiple filters.
 - a. Click **Add Filter**.

A blank filter appears.

- b. Specify the filter conditions.
 - i. In the **IF** row, select an issue attribute or a custom attribute for which to filter:

Note: Static, dynamic, and mobile issue attributes are set by Fortify Software Security Content. Open source issue attributes are set by Sonatype.

Field	Scan Type	Description
Severity	Static, dynamic, mobile, open source	Issue severity

Field	Scan Type	Description
Rule ID	Static, dynamic, mobile, open source	A unique identifier for the rule that identified an issue. You can find the Rule ID on the Vulnerability tab of the issue details panel.
Kingdom	Static, dynamic, mobile	Seven Pernicious Kingdoms classification
Category	Static, dynamic, mobile	Vulnerability category, which contains one or more rule IDs. A filter based on a category will be applied to all rule IDs belonging to that category.
<Custom Application Attribute>	Static, dynamic, mobile	Custom attributes in your tenant (picklist, text, and boolean)
URL	Dynamic, mobile	Issue URL
Body	Dynamic, mobile	HTTP message body
Headers	Dynamic, mobile	HTTP request header
Parameters	Dynamic, mobile	HTTP query parameters
Component Name	Open source	Component name
Component Version	Open source	Component version

- ii. Select one of the following operators:

Operator	Description
Contains	Searches for results that contain the specified value

Operator	Description
Does Not Contain	Searches for results that do not contain the specified value
Equals	Searches for an exact match of the specified value
Does Not Equals	Searches for results that do not match the specified value

iii. Enter the value for the issue attribute. Wildcards are not accepted.

Note: If you previously selected a custom picklist or boolean attribute and the **Equals** operator, the values are prepopulated.

iv. If needed, click **+** to create additional filter conditions.

v. Select **And** or **Or** to combine multiple filter conditions

c. In the **THEN** row, select one of the following audit actions to apply to matching results:

Operator	Description
Suppress	Suppresses matching results
Set Severity	Sets issue severity of matching results to the specified value

5. To rearrange the location of a filter, click  and drag the filter to your desired slot.

6. Once you are done adding and arranging filters, click **Save**.

The global audit template is saved.

Related Topics:

For information on creating an application audit template, see ["Creating an Application Audit Template" below](#).

Creating an Application Audit Template

Users with the **Audit Issues** permission can manage audit templates for applications to which they have access. An application audit template applies to all scans of the specified type for the application.

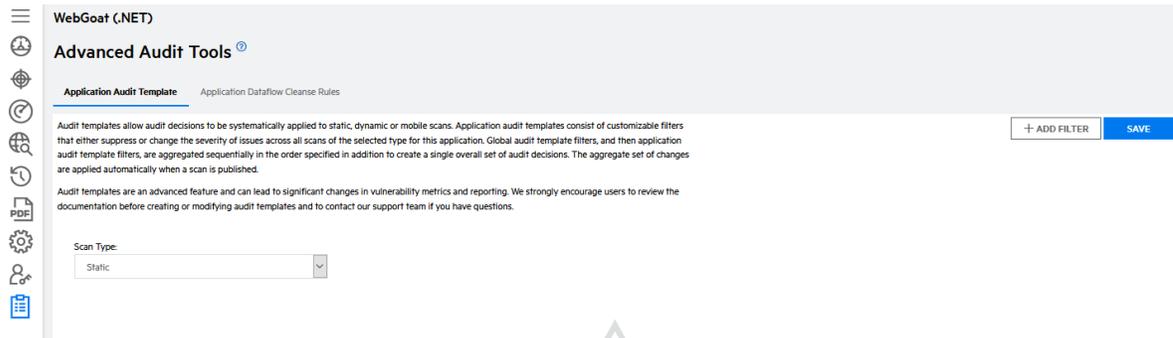

Audit templates are subjected to the following conditions:

- Audit template filters are case-insensitive.
- Newly created or modified audit template filters are applied to scans published moving forward.

To create an application audit template:

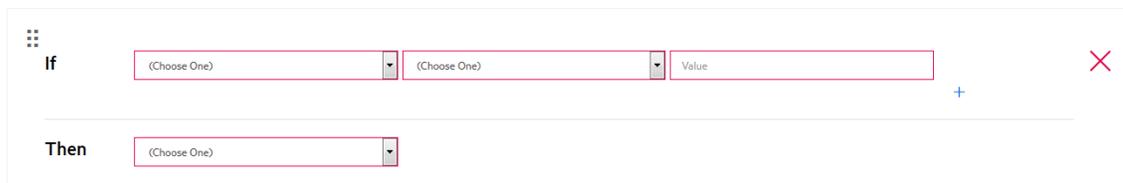

1. Select the **Application** view.
Your Applications page appears.
2. Click the name of the application for which you want to create an application audit template.
3. Click **Audit Tools**.

The Advanced Audit Tools page appears.

4. On the **Application Audit Template** tab, select the scan type to which the application audit template will be applied from the **Scan Type** list.
5. Perform the following steps to add a filter. You can add multiple filters.
 - a. Click **Add Filter**.

A blank filter appears.

- b. Specify the filter conditions.
 - i. In the **IF** row, select one of the following issue attributes for which to filter:

Note: Static, dynamic, and mobile issue attributes are set by Fortify Software Security Content. Open source issue attributes are set by Sonatype.

Field	Scan Type	Description
Severity	Static, dynamic, mobile, open source	Issue severity.
Rule ID	Static, dynamic, mobile,	A unique identifier for the rule that identified an issue. You can find the Rule ID on the Vulnerability tab when viewing issue details.

Field	Scan Type	Description
	open source	
Kingdom	Static, dynamic, mobile	Seven Pernicious Kingdoms classification.
Category	Static, dynamic, mobile	Vulnerability category, which contains one or more rule IDs. A filter based on a category will be applied to all rule IDs belonging to that category.
File	Static	Full file path
Package	Static	Package or namespace
Source	Static	Dataflow source function
Sink	Static	Dataflow sink function
URL	Dynamic, mobile	Issue URL
Body	Dynamic, mobile	HTTP message body
Headers	Dynamic, mobile	HTTP request header
Parameters	Dynamic, mobile	HTTP query parameters
Component Name	Open source	Component name
Component Version	Open source	Component version

ii. Select one of the following operators:

Operator	Description
Contains	Searches for results that contain the specified value

Operator	Description
Does Not Contain	Searches for results that do not contain the specified value
Equals	Searches for an exact match of the specified value
Does Not Equals	Searches for results that do not match the specified value

- iii. Enter the value for the issue attribute. Wildcards are not accepted.
 - iv. If needed, click **+** to create additional filter conditions.
 - v. Select **And** or **Or** to combine multiple filter conditions .
- c. In the **THEN** row, select one of the following audit actions to apply to matching results:

Operator	Description
Suppress	Suppresses matching results
Set Severity	Sets issue severity of matching results to the specified value

- 6. To rearrange the location of a filter, click **☰** and drag the filter to your desired slot.
- 7. Once you are done adding and arranging filters, click **Save**.

The application audit template is saved.

Related Topics:

For information on creating a global audit template, see ["Creating a Global Audit Template" on page 211](#).

Creating an Application Audit Template Filter for an Issue

In addition to creating an application audit template from the ground up, users with the **Audit Issues** permission can create application audit template filters for an issue from the Issues page. This enables auditors to easily apply audit decisions to issues while reviewing them.

To create an application audit template filter for an issue:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application that you want to audit.
The Application Overview page appears.
3. Navigate to the Application Issues or Release Issues page.

The screenshot displays the Fortify Application Issues interface. On the left, a sidebar contains navigation icons. The main area shows a vulnerability for 'Cross-Site Scripting: Reflected' with a severity of 'Critical'. The summary explains that this is a Unicode conversion XSS vulnerability. The explanation details that the application fails to properly validate Unicode characters in the 'Request Validation' and 'HttpServerUtility.HtmlEncode' security mechanisms. The right sidebar, titled 'Audit', shows the status as 'New', introduced on 2016/05/13, and last found on 2016/05/13. The assigned user is 'Huang, Yeu (Huang)', and the developer status is 'Open'. The auditor status is 'Pending Review'. The severity is 'Critical'. At the bottom of the audit panel, there are buttons for 'ADD', 'SUBMIT BUG', and 'ADD AUDIT FILTER'.

4. In the audit panel, click **Add Audit Filter**.

The Audit Template window appears.

5. Perform the relevant task:

- If the selected issue has existing filters that apply, those filters are displayed. You can edit the filters.

Note: If multiple filters apply and one of them is a suppression, only that filter is displayed.

The screenshot shows the 'Audit Template' dialog box. It contains the following text: 'The following filter(s) already exist in your application audit template.' Below this, a filter is listed: 'If Category Equals cross-site scripting: reflected Then Set Severity To High'. At the bottom of the dialog, there are two buttons: 'EDIT FILTER(S)' and 'CLOSE'.

i. Click **Edit Filter(s)**.

You are redirected to the Application Audit Template page.

ii. Edit the existing filters as necessary.

- If the selected issue does not have any filters that apply, you can create a new filter from a list of predefined conditions that apply to the issue.

For more information on category and rule changes, see the Fortify Software Security Content quarterly updates from Fortify Software Security Research (SSR). You can access them from the Help Center.

The following examples show several filter combinations and how they are applied.

Example 1:

Audit template filters:

1. If **Severity Equals Critical**, then **Set Severity** to **High**
2. If **Severity Equals Critical**, then **Set Severity** to **Medium**

Result: Critical issues are set to Medium for the selected scan type.

Example 2:

Audit template filters:

1. If **Severity Equals Critical**, then **Set Severity** to **High**
2. If **Severity Equals High**, then **Set Severity** to **Medium**.

Result: Critical issues are set to High, High issues are to set Medium for the selected scan type.

Example 3:

Audit template filter: If **Rule ID Equals 11516**, then **Suppress**.

Result: Issues with rule ID 1156 are suppressed for the selected scan type

Example 4:

Global audit template filter: If **Severity Equals Critical**, then **Set Severity** to **High**

Application audit template filter: If **Severity Equals Critical**, then **Set Severity** to **Medium**

Result: Critical issues are set to High for all scans of the selected type, but Critical issues are set to Medium for scans of the selected type for the application above.

Dataflow Cleanse Rules

Dataflow cleanse rules describe validation logic and other actions that render tainted data (user-controlled input) cleansed. Dataflow cleanse rules are incorporated in a static scan to help Fortify Static Code Analyzer recognize cleansing functions. As a result, dataflow cleanse rules help prevent false positives around dataflow issues.

Dataflow cleanse rules can be created at the global and application levels. Security Leads can manage global dataflow cleanse rules; users with the **Audit Issues** permission can manage dataflow cleanse rules for applications to which they have access.

Important! Dataflow cleanse rule is an advanced feature and can lead to significant changes in vulnerabilities found in a scan. Fortify strongly recommends that you review the documentation

before using dataflow cleanse rules. If you have additional questions, contact support.

This section contains the following topics:

Creating a Global Dataflow Cleanse Rule	221
Creating an Application Dataflow Cleanse Rule	223
Dataflow Cleanse Rule Usage and Examples	225

Creating a Global Dataflow Cleanse Rule

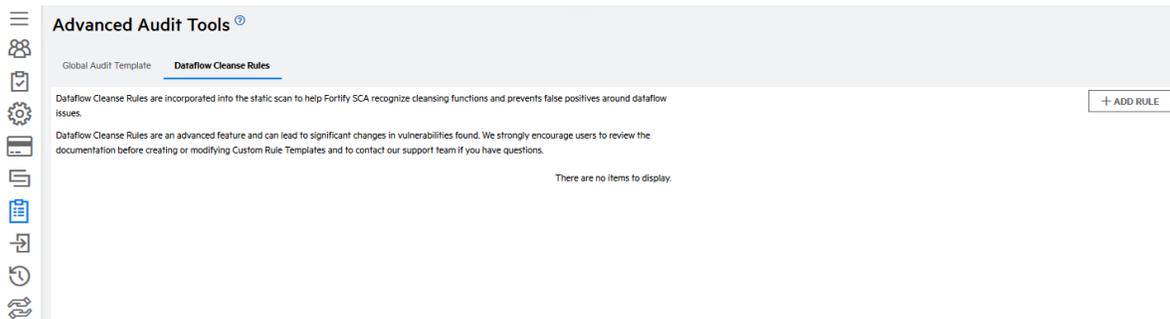

Security Leads can manage global dataflow cleanse rules. Global dataflow cleanse rules apply to all static scans in the tenant.

Dataflow cleanse rules are subjected to the following conditions:

- Dataflow cleanse rules are case-sensitive and are restricted to alphanumeric characters.
- Dataflow cleanse rules are applied to scans that are started moving forward.

To create a global dataflow cleanse rule:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Audit Tools**.
The Advanced Audit Tools page appears.
3. Select the **Dataflow Cleanse Rules** tab.

4. Perform the following steps to add a rule. You can add multiple rules.
 - a. Click **Add Rule**.
The Add Rule window opens.

Add Rule ✕

Category

Package Name

Data Validation

Class Name

Function Name

[SAVE](#) [CANCEL](#)

- b. Complete the fields as needed. Fields are required unless otherwise noted.

Note: Rules do not apply against interfaces or super classes.

Field	Description
Language	Select the technology stack.
Package Name	(Optional) Type the name of the package or namespace that contains the validation function. If you do not specify a package name, the rule only matches functions that are not inside a package.
Class Name	(Optional) Type the name of the class that contains the validation function. If you do not specify a class name, the rule only matches functions that are not inside a class. To specify a nested class, use the dot notation (for example, OuterClass.NestedClass). Note: For .NET languages, the convention for the class name of a generic class is to append the class name with an @ and the number of type parameters. Example: for <code>System.Func<T, TResult></code> , the class name would be <code>Func@2</code> .
Function Name	Type the name of the validation function.
Category	Select the vulnerability category that is remediated by the validation function.

Field	Description
Data Validation	Select the data that has been validated by the function: <ul style="list-style-type: none">◦ Return Value: use this option to refer to value in <code>value = web.getWebInput(foo, bar)</code>◦ Object Function: use this option to refer to web in <code>value = web.getWebInput(foo, bar)</code> or object in <code>object = new MyObject()</code>◦ Argument: use this option when referring to arguments of the function. Arguments are indexed beginning with 0. For example, specify 1 to refer to bar in <code>value = web.getWebInput(foo, bar)</code>

5. Once you are done adding rules, click **Save**.
The global dataflow cleanse rules are saved.

Creating an Application Dataflow Cleanse Rule

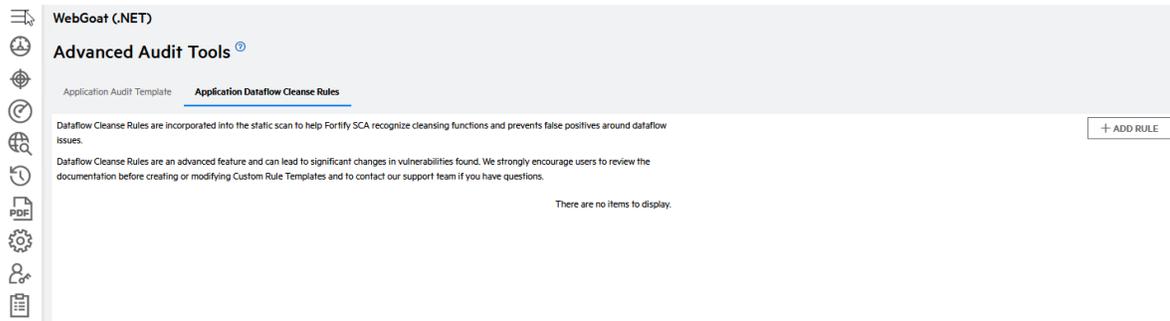

Users with the **Audit Issues** permission can manage dataflow cleanse rules for applications to which they have access. Application dataflow cleanse rules apply to all static scans for the application.

Dataflow cleanse rules are subjected to the following conditions:

- Dataflow cleanse rules are case-sensitive and are restricted to alphanumeric characters.
- Dataflow cleanse rules are applied to scans that are started moving forward.

To create an application dataflow cleanse rule:

1. Select the **Application** view.
Your Applications page appears.
2. Click the name of the application for which you want to create an application audit template.
3. Click **Audit Tools**.
The Advanced Audit Tools page appears.
4. Select the **Dataflow Cleanse Rules** tab.

5. Perform the following steps to add a rule. You can add multiple rules.

a. Click **Add Rule**.

The Add Rule window opens.

b. Complete the fields as needed. Fields are required unless otherwise noted.

Note: Rules do not apply against interfaces or super classes.

Field	Description
Language	Select the technology stack.
Package Name	(Optional) Type the name of the package or namespace that contains the validation function. If you do not specify a package name, the rule only matches functions that are not inside a package.
Class Name	(Optional) Type the name of the class that contains the validation function. If you do not specify a class name, the rule only matches functions that are not inside a class. To specify a nested class, use the dot notation (for example, OuterClass.NestedClass).

Field	Description
	Note: For .NET languages, the convention for the class name of a generic class is to append the class name with an @ and the number of type parameters. Example: for <code>System.Func<T, TResult></code> , the class name would be <code>Func@2</code> .
Function Name	Type the name of the validation function.
Category	Select the vulnerability category that is remediated by the validation function.
Data Validation	Select the data that has been validated by the function: <ul style="list-style-type: none">◦ Return Value: use this option to refer to value in <code>value = web.getWebInput(foo, bar)</code>◦ Object Function: use this option to refer to web in <code>value = web.getWebInput(foo, bar)</code> or object in <code>object = new MyObject()</code>◦ Argument: use this option when referring to arguments of the function. Arguments are indexed beginning with 0. For example, specify 1 to refer to bar in <code>value = web.getWebInput(foo, bar)</code>

6. Once you are done adding rules, click **Save**.

The application dataflow cleanse rules are saved.

Dataflow Cleanse Rule Usage and Examples

Global and application dataflow cleanse rules are aggregated into a single set of rules that are applied during a scan. Issues that are removed based on rules do not appear in the FPR.

The following examples show several dataflow cleanse rules and how they are applied.

Example 1:

```
Language: Java  
Package Name: com.fortify.appsec  
Class name: Validation  
Function Name: validateAlphaNumeric
```

Category: **SQL Injection**

Data Validation: **Return Value**

Result: The return value of the method is considered cleansed and will not be flagged as a SQL Injection issue.

Example 2:

Language: **Java**

Package Name: `java.util`

Class name: `Map`

Function Name: `clear`

Category: **SQL Injection**

Data Validation: **Object Function**

Result: The data is considered cleansed after a call to the `Map.clear()` method and will not be flagged as a SQL Injection issue.

Requesting a Remediation Scan

After changes have been made to fix the issues identified in the initial scan, you can request a remediation scan to verify whether the issues have been fixed. Assessments include one or more remediation scans:

- Single assessments include one remediation scan.
- Subscriptions include unlimited remediation scans during the remediation scan period.

Fortify on Demand typically limits a remediation scan to 30 days after the initial scan. Exceptions are noted in your contract.

Request a remediation scan by selecting **<assessment_type> - Remediation** on the Scan Setup page. The remediation scan must be performed on the same application. For example, if the initial scan was done on the pre-production site, the remediation scan must also be on the pre-production site. A remediation scan takes less time than a full initial scan.

Note: For a dynamic scan, the following fields are locked to the values specified in the initial scan: **Dynamic Site URL, Environment Facing, Scan entire host, Restrict scan to URL directory and subdirectories, Allow HTTP (:80) and HTTPS (:443), Allow form submissions, and Exclude URLs which contain <exclusion>**.

Chapter 6: Dashboards and Reports

Fortify on Demand delivers assessment results in a variety of formats for viewing and analyzing data.

Dashboards provide a visual display of key metrics. Users can configure multiple dashboards to display data that is relevant to their needs. While dashboards are useful for general summaries, users can get a detailed view of assessment results through reports. Fortify on Demand provides a comprehensive and customizable suite of reports.

This section contains the following topics:

- [Chapter 6: Magellan Dashboards](#)227
- [Legacy Dashboards](#)230
- [Reports](#) 241

Chapter 6: Magellan Dashboards

The portal has implemented new dashboards leveraging the OpenText Magellan platform. The new dashboards will offer a comprehensive application security program overview, insight into important vulnerability metrics, and consistent dashboard views among the Fortify product suite. Magellan dashboards are available alongside legacy dashboards.

The following default dashboard types are available:

- Executive Overview
- Program Overview

A Magellan dashboard consists of:

- Singular data points of key metrics.
- Individual charts that visualize a specific facet of tenant data. Tiles are customizable at a granular level.

Filters, if applicable, can be applied to data represented in the charts. Users can download the data in the chart, either as the chart itself or as raw data, in several formats.

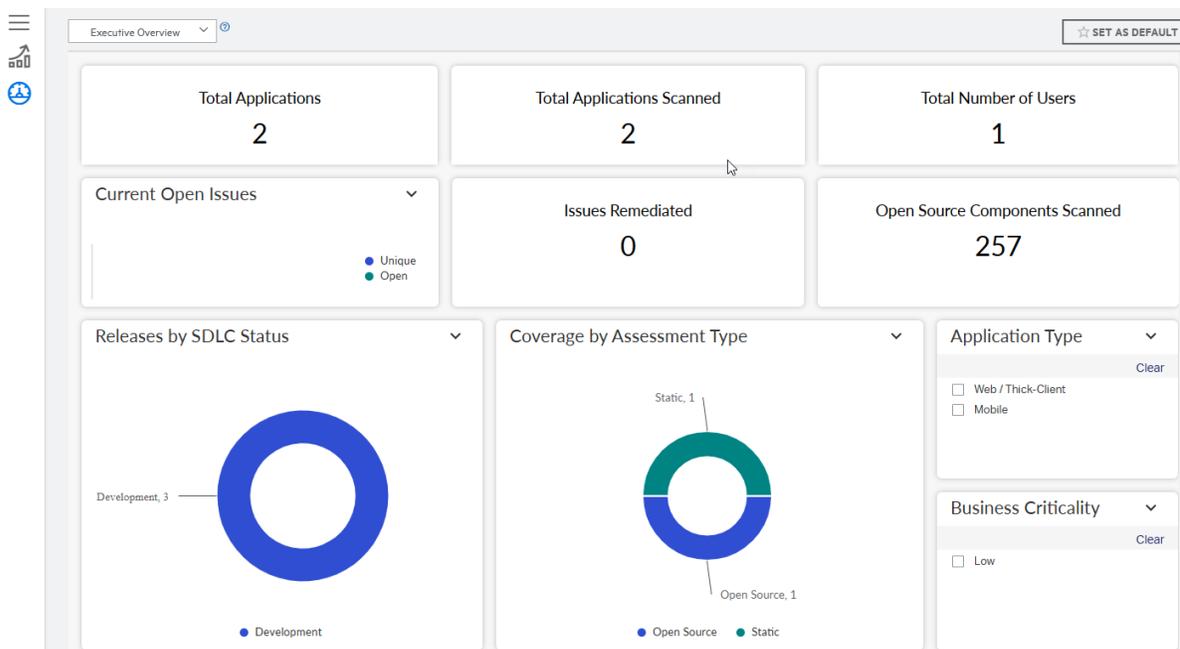

This section contains the following topics:

Viewing Magellan Dashboards

To view your Magellan dashboards:

1. Select the **Dashboard** view.
The dashboard page appears.

- Click **New Dashboards** on the left menu.
The default Magellan dashboard is loaded.

The following table describes how to navigate the Magellan dashboard page.

Task	Action
Dashboard tasks	
Set the current dashboard as the default	Click Set as Default .
Filter all charts in the dashboard	Select one or more filter values from the following application and release filters: application type, business criticality, has microservices, pass/fail, star rating, SDLC status
Tile tasks	
Refresh the data used in a chart	Right-click the header and select Refresh .
Show or hide a chart's header	Right-click the header and select or deselect the Header check box.
Maximize a tile	Right-click the header and select Maximize .

Task	Action
Adjust a tile size	Hover over a tile border and click and drag the handles.
Show filters applicable to a chart	Right-click the header and select Show links . Note: The Show links option is currently not supported.
Chart tasks	
Filter a chart by categories.	Right-click the chart, select Filter > Filter , and configure the settings.
Filter a chart by top and bottom values	Right-click the chart, select Filter > Top/Bottom N , and configure the settings.
Change a chart type	Right-click the chart, select Change type , and configure the settings.
Edit a chart's elements	Right-click the chart, select Format chart , and configure the settings.
Export a chart's raw data	Right-click the chart, select Export data , and configure the settings. Important! Data export is currently not supported.
Export a chart (multiple file types are available)	Right-click the chart, select Export content , and configure the settings.
View or hide a chart's raw data	Right-click the chart and select View data table or Hide data table .

Magellan Dashboard Types

The following dashboard types are available:

- Executive Overview
The dashboard contains the following charts:
 - Releases by SDLC Status (excludes retired releases)
 - Coverage by Scan Type (SAST, SCA, DAST, MAST)
 - Release Policy Compliance (excludes retired releases)
 - Releases by Star Rating (excludes retired releases)

- Issues Status by Criticality (excludes suppressed and informational findings)
 - Issues Status Trend (excludes suppressed and informational findings)
 - Program Overview
- The dashboard contains the following charts:
- Active Entitlements
 - Applications by Tech Stack (top 10 technology stacks)
 - Scan Activity by Scan Type (SAST, SCA,DAST,MAST)
 - Issue Breakdown by Severity
 - Top 10 Category Issues: Production Releases, OWASP 2021 Top 10, OWASP ASVS 4.0, OWASP 2014 Mobile
 - Top 10 Applications by Issues

Note: Trending charts do not render until sufficient data is available.

Magellan Dashboard Current Limitations

The current implementation of Magellan Dashboards has the following limitations:

- Creation of new dashboards or customization of existing dashboards are not supported.
- Drill down links and redirection links are not supported.
- Export, print, and share functions are not supported.
- Issue counts in charts do not account for uniqueness.
- The following chart settings are not supported:
 - **Show links** option
 - Data export
- Color assignment and chart legends do not follow portal conventions.
- Dark mode is not supported.

Legacy Dashboards

A dashboard is made up of individual tiles that each present a specific facet of data as a visual element. You are initially provided with one of the following default dashboard configurations based on your user role:

- Development dashboard for Developer, Lead Developer, and Application Lead roles
- Security dashboard for Security Lead and TAM roles
- Management dashboard for Executive and Reviewer roles
- Management dashboard for custom roles

You can edit the default dashboard as well as create additional dashboards.

This section contains the following topics:

- [Viewing Dashboards](#) 231
- [Dashboard Graph Types](#) 232
- [Creating a Dashboard](#) 235
- [Editing a Dashboard](#) 237
- [Deleting a Dashboard](#) 239

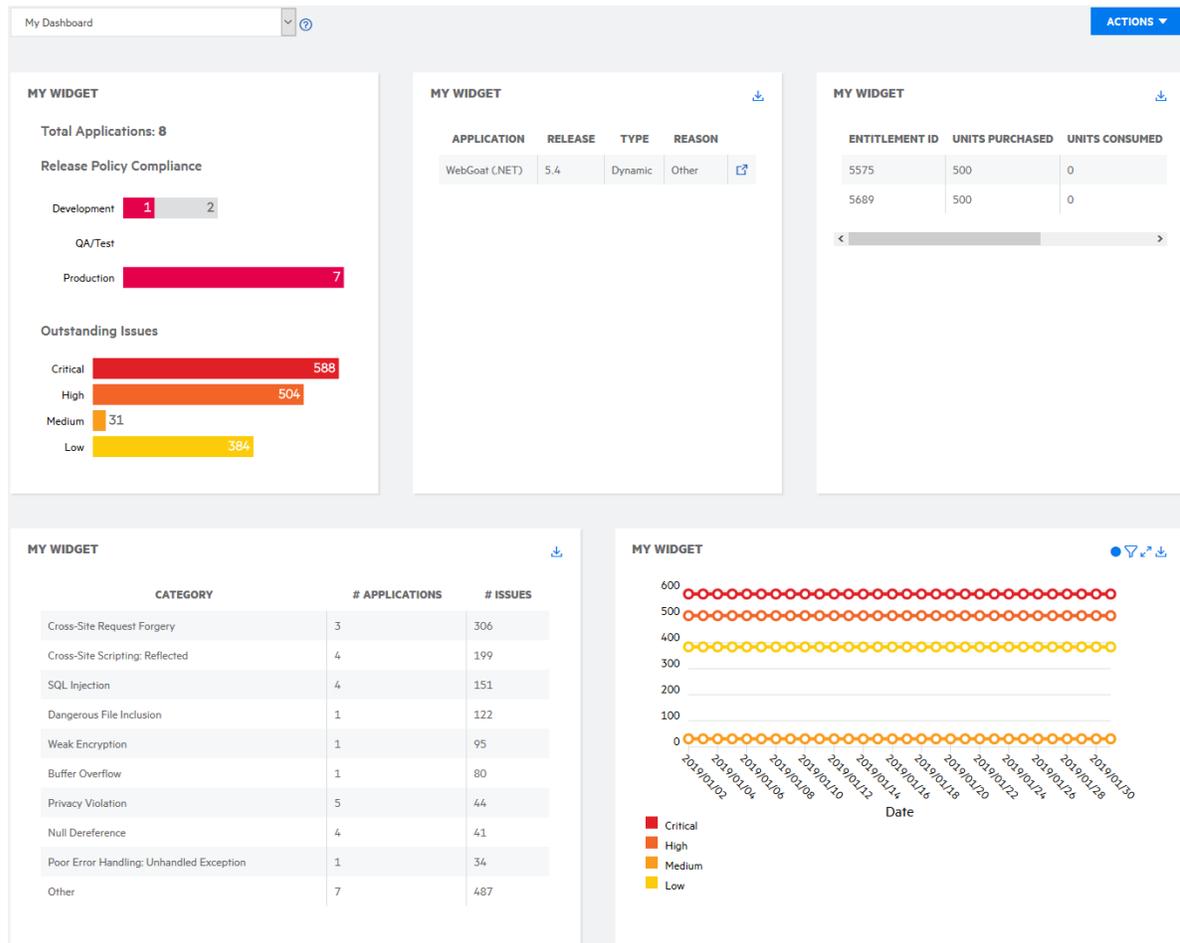

Viewing Dashboards

To view your dashboards:

1. Select the **Dashboard** view.

The dashboard page appears. It displays the last dashboard that was loaded.

Note: If you have not yet configured a dashboard, a default dashboard configuration based on your user role is loaded.

2. Select the dashboard that you want to view from the drop-down list.

The selected dashboard is loaded.

The following table describes how to navigate the dashboard page.

Task	Action
Create a dashboard	Select Actions > New Dashboard . For more information, see "Creating a Dashboard" on page 235 .
Edit the dashboard	Select Actions > Edit Dashboard . For more information, see "Editing a Dashboard" on page 237 .
Generate a PDF of the dashboard	Select Actions > Print .
Display or hide data point markers	Click ● in a trending chart tile.
View filters applied to a tile	Click ▾.
Export data that makes up a tile	Click ↓. A .csv file is saved locally to the folder specified in your browser settings.
View details of a scan	Click ↗ in a list grid tile.
Expand a tile	Click ↗ in a trending chart tile.

Dashboard Graph Types

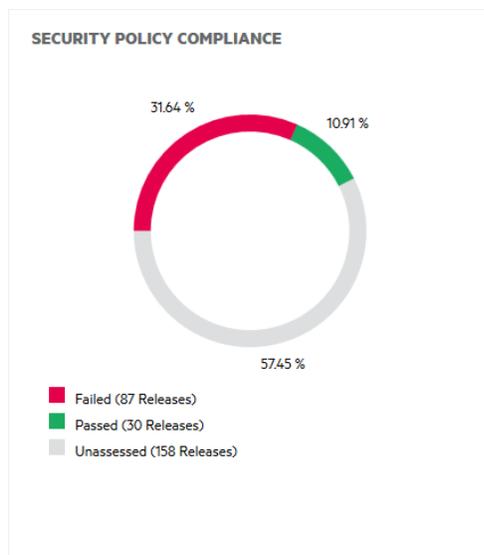

The following tile types are available in a dashboard:

- Gauge
- List Grid
- Summary
- Trending Chart

Gauge

The **Gauge** tile is a gauge graph summarizing one of the following data items: assessed releases, auditor status, developer status, entitlement consumption, issue assignment, and security compliance.

Data Item Type	Description
Assessed Releases	Assessment state of issues
Auditor Status	Auditor status of issues
Developer Status	Developer status of issues
Entitlement Consumption	Usage of active entitlements
Issue Assignment	Assignment state of issues
Security Compliance	Policy compliance status across releases

List Grid

The **List Grid** tile is a list or grid view of one of the following data items: active entitlements, canceled scans, completed scans, in progress scans, most prevalent issues, my issues, paused scans, and scheduled scans. For scans, the List Grid also contains links to the relevant Scan Setup page or Scans page.

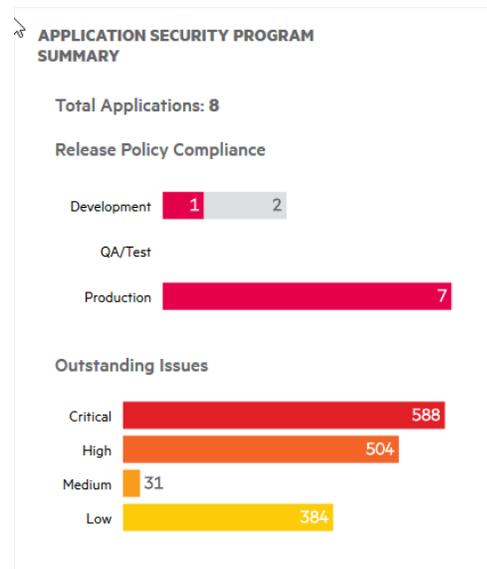

Data Item Type	Description
Active entitlements	Active entitlements
Canceled scans	Scans that were canceled
Completed scans	Scans that were completed

In progress scans	Scans currently in progress
Most prevalent issues	Most prevalent issues across all applications
My issues	Issues assigned to the current user account
Paused scans	Scans paused by the testing team
Scheduled scans	Scans that have been scheduled

APPLICATION	RELEASE	TYPE	REASON
WebGoat (NET)	5.4	Dynamic	Other

Summary

The **Summary** tile is a quick summary of the security risk of your releases. It shows the total number of applications in the portfolio and the following information about development, QA, and production releases: security policy compliance and outstanding issues (issues that are not fix validated or suppressed).

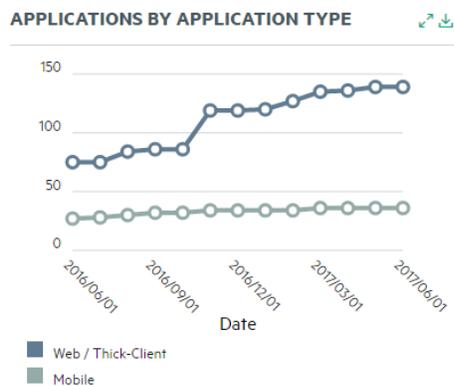

Trending Chart

The **Trending Chart** tile is a line graph of one of the following data items over time: applications, entitlements, issues, releases, and scans. Data series are grouped by a specified attribute.

Note: Data points for all items are measured additively except for scans.

Data Item Type	Description
Applications	Number of applications, grouped by an application attribute
Entitlements	Number of entitlement units, grouped by units purchased, consumed, or available
Issues	Number of issues, grouped by an issue attribute
Releases	Number of releases, grouped by an application or release attribute
Scans	Number of scans, grouped by the scan status

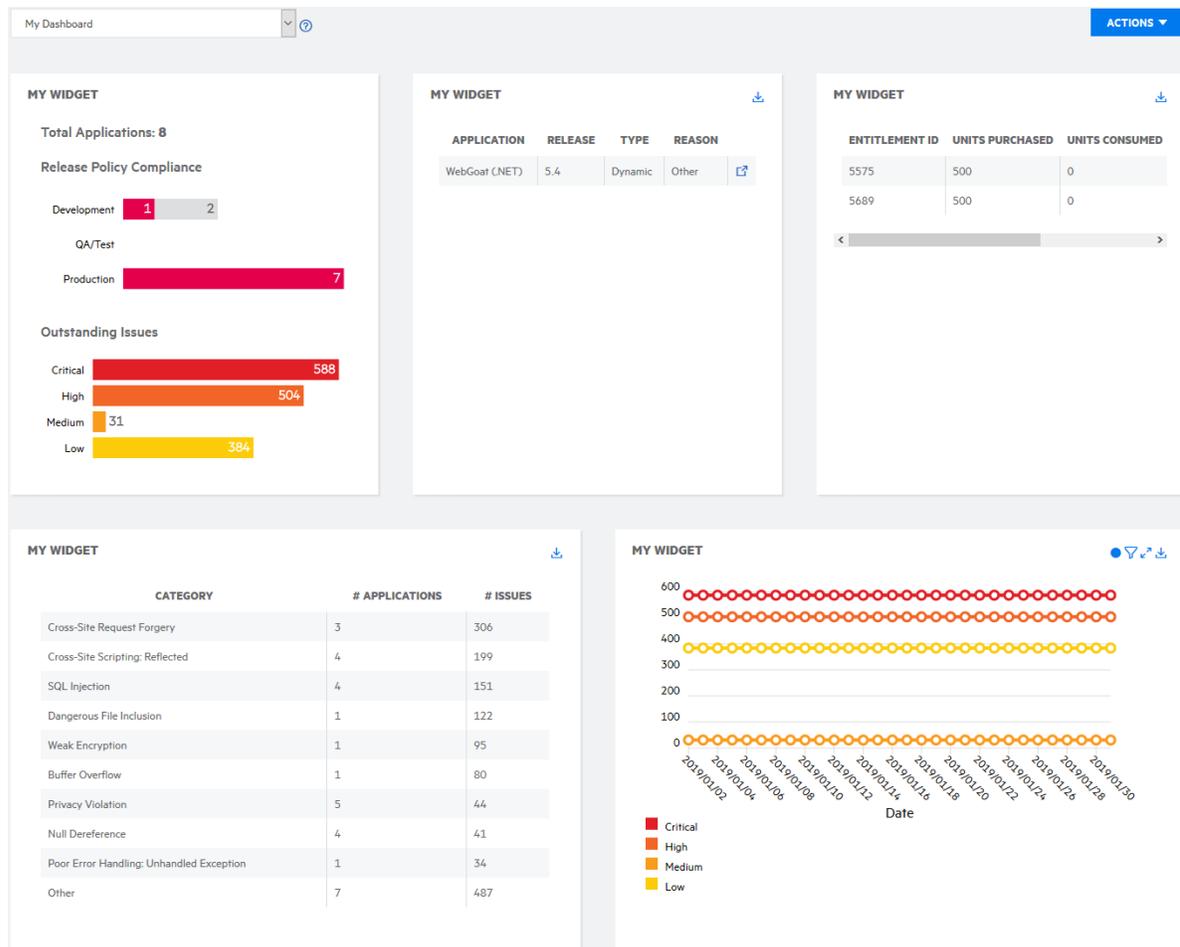

Creating a Dashboard

You can create additional dashboards for organizing different facets of data. You can have up to 10 dashboards.

To create a dashboard:

1. Select the **Dashboard** view.

The dashboard page appears. It displays the last dashboard that was loaded.

2. Select **Actions > New Dashboard**.

The Create a Dashboard window opens.

The 'Create a Dashboard' dialog box includes the following elements:

- Dashboard Name:** A text input field.
- Dashboard Layout:** Radio button options for Blank (selected), Default, and Copy from existing Dashboard.
- SAVE:** A blue button at the bottom right.

3. In the **Dashboard Name** field, type a name for the new dashboard.

4. Select the initial layout of the new dashboard:

- **Blank:** start with a blank dashboard
 - **Default:** use the default dashboard configuration for your user role
 - **Copy from existing Dashboard:** copy the layout of an existing dashboard
5. Click **Save**.
The new dashboard appears.

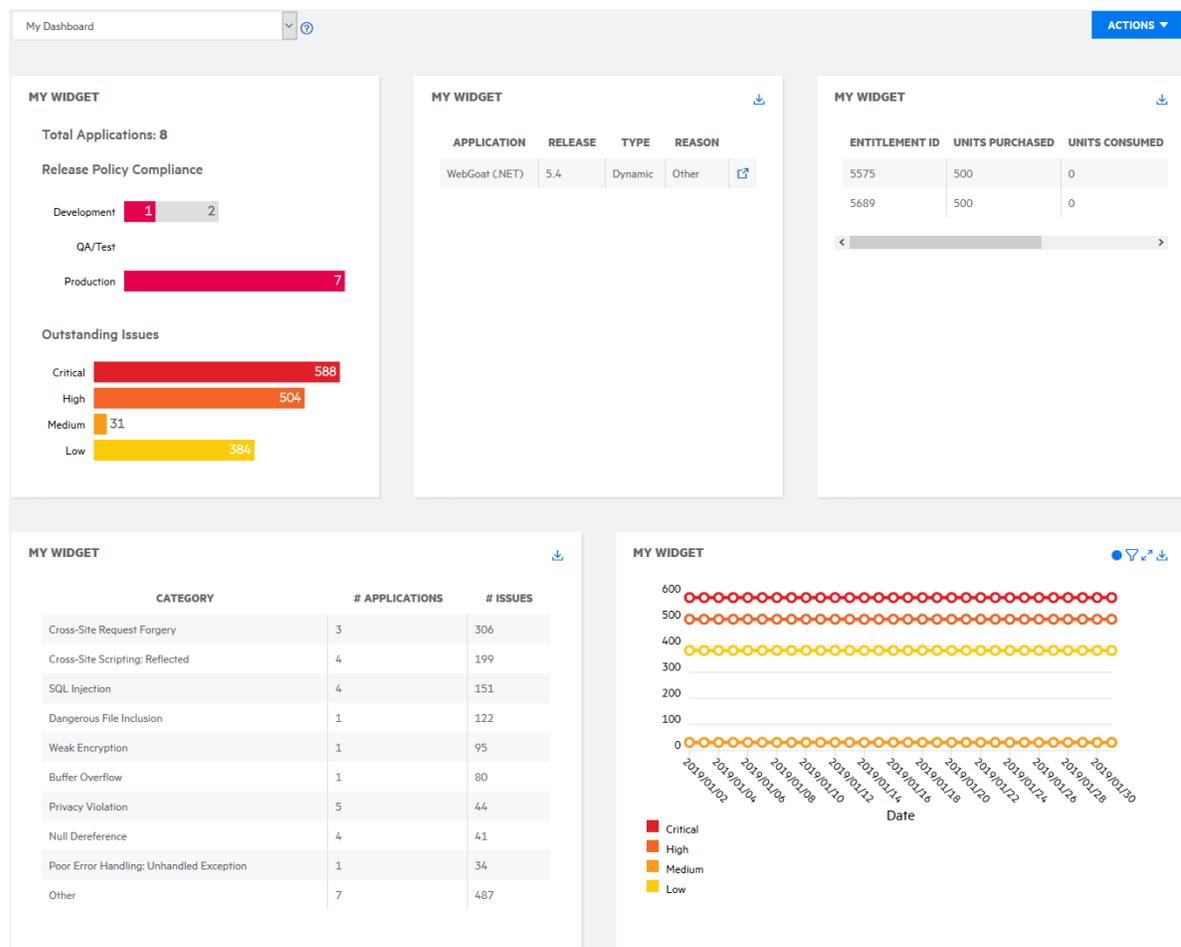

Editing a Dashboard

You can edit a dashboard by adding, editing, rearranging, and deleting rows and tiles. A dashboard can have up to ten tiles with a maximum of three tiles per row.

To edit a dashboard:

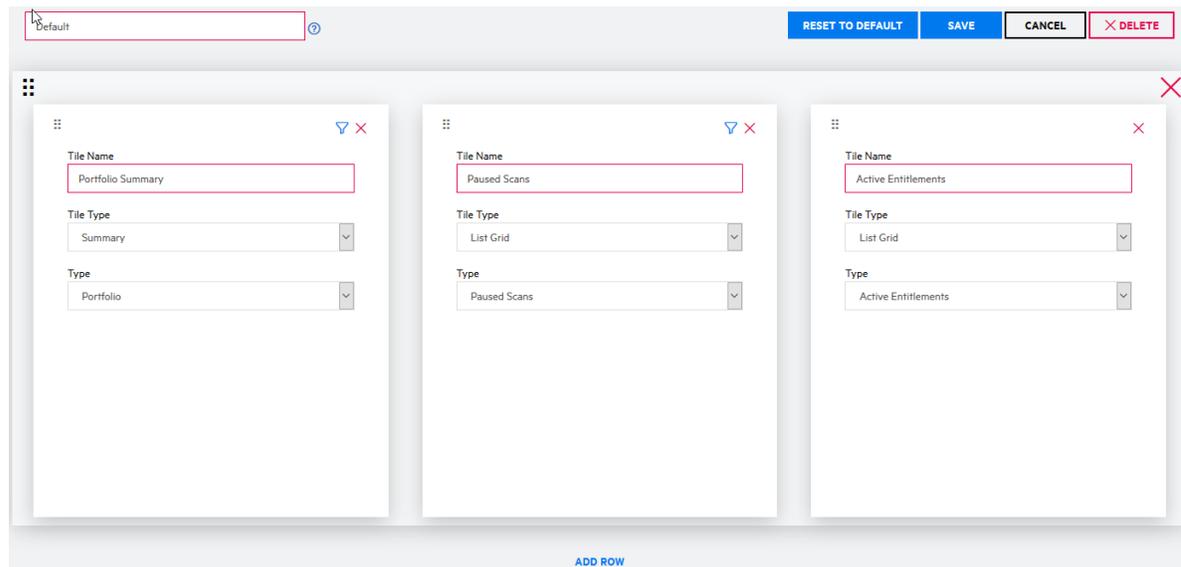

1. Select the **Dashboard** view.

The dashboard page appears. It displays the last dashboard that was loaded.

2. Select the dashboard that you want to edit from the drop down list.
3. Select **Actions > Edit Dashboard**.

The dashboard refreshes in edit mode.

4. Perform one or more following tasks to edit the dashboard:

Task	Procedure
Add a tile	<ol style="list-style-type: none"> a. Perform one of the following actions: <ul style="list-style-type: none"> ◦ Click + in a row to add a tile (if available). ◦ Click Add Row to add a tile in a new row (if available). <div style="background-color: #f0f0f0; padding: 5px; margin: 10px 0;">Note: Each row can contain up to a maximum of three tiles.</div> b. In the Tile Name field, type a name for the tile. c. Select the tile type from the Tile Type list. For a description of the tile types, see "Dashboard Graph Types" on page 232. d. Perform the relevant action based on the tile type you selected. <ul style="list-style-type: none"> ◦ If you selected Gauge, select the data item to be represented from the Type list. ◦ If you selected List Grid, select the data item to be represented from the Type list. ◦ If you selected Summary, select the data item to be represented from the Type list. The current available value is Portfolio. ◦ If you selected Trending Chart, select the data item to be represented from the Data Type list, select the time period of the graph from the Resolution list, and select the attributes by which to group the data from the Group By lists.

	e. If applicable, click  and select the filter values to be applied. The filters that are available depend on the data item type selected.
Edit a tile	Choose an existing tile to edit and update the fields as needed.
Move a row/tile	Click  and drag the row/tile to the desired slot. Note: You can move a tile within a row, but you cannot move a tile to another row.
Delete a row/tile	Click  next to the row/tile.
Reset dashboard to the default configuration	Click Reset to Default .
Return to the view mode without saving changes	Click Cancel .

5. Click **Save**.

The dashboard refreshes with your changes.

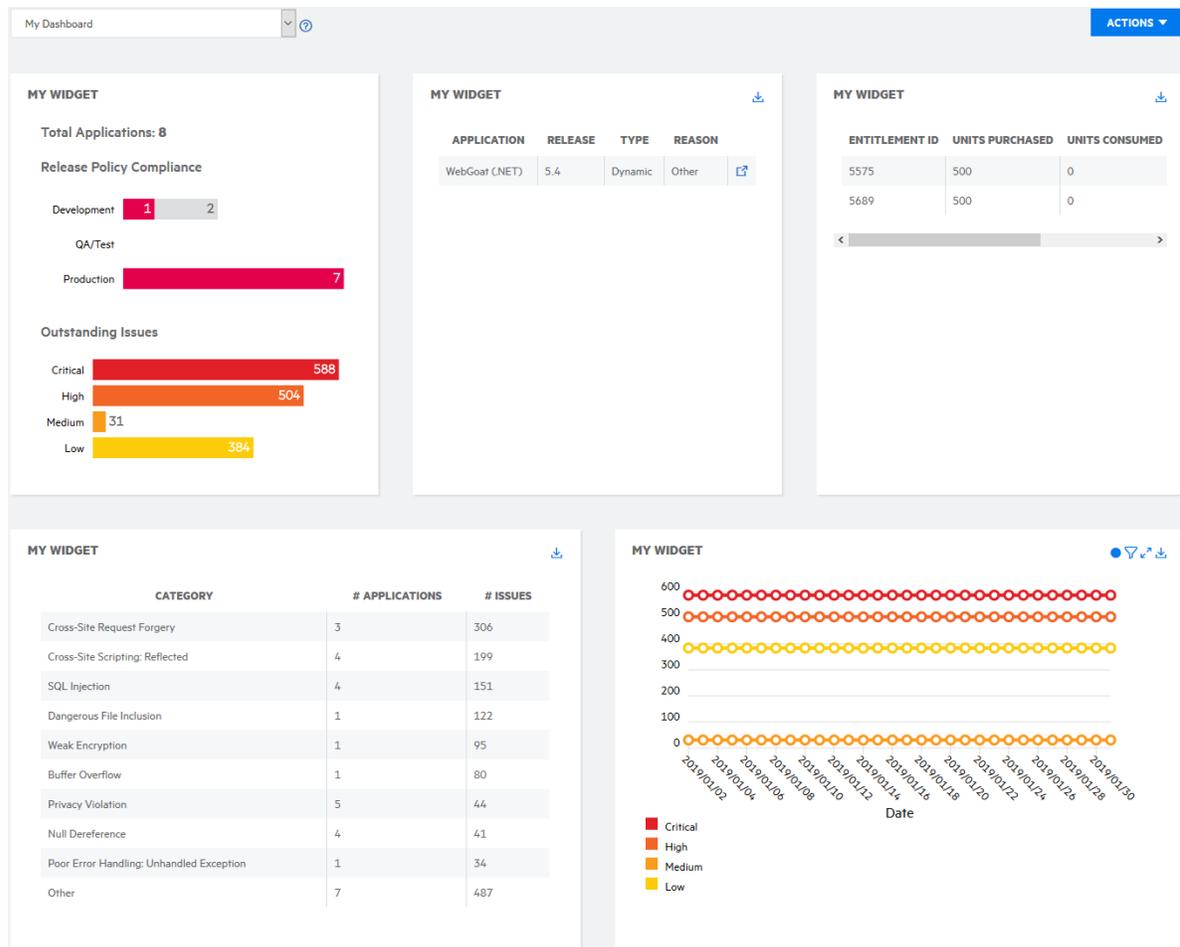

Deleting a Dashboard

To delete a dashboard, you must have at least one other dashboard. If you want to delete your only dashboard, you will need to first create another one.

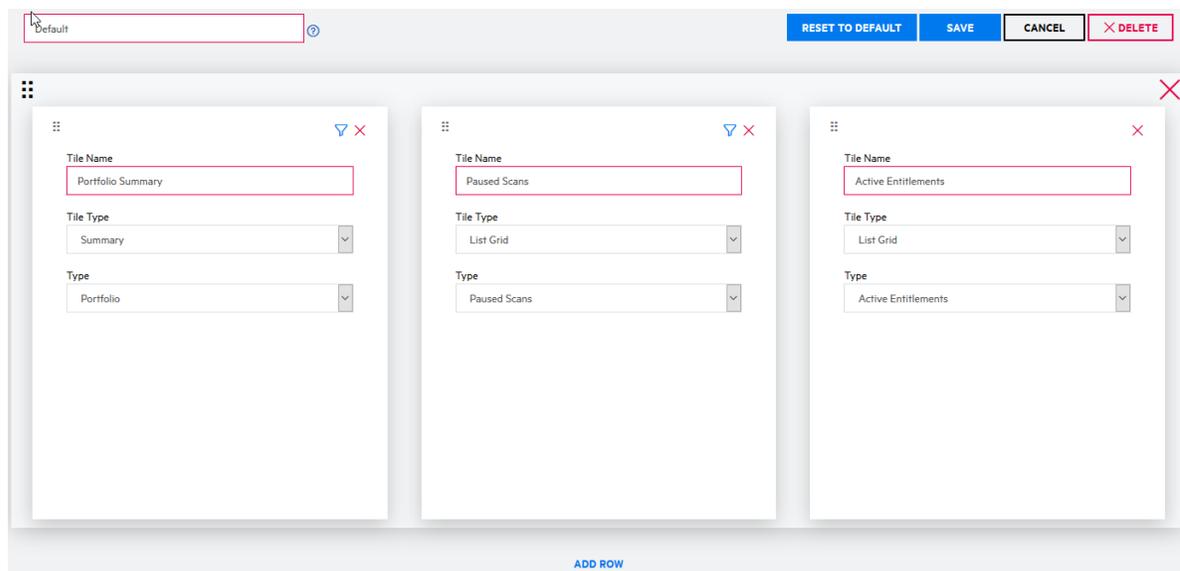

To delete a dashboard:

1. Select the **Dashboard** view.

The dashboard page appears. It displays the last dashboard that was loaded.

2. Select the dashboard that you want to delete from the drop down list.
The selected dashboard is loaded.
3. Select **Actions** > **Edit Dashboard**.
The dashboard refreshes in edit mode.

4. Click **Delete**.
A confirmation message appears.
5. Click **Yes**.
The dashboard is deleted.

Reports

Fortify on Demand offers the ability to generate detailed reports of assessment results. You can generate the following types of reports:

- Pre-defined system reports
- Custom reports
- Data exports of applications, releases, scans, issues, or entitlement consumption
- Vendor reports if you are using the Vendor Management feature

Note: Open source component reports are available through the Fortify on Demand report functionality. You can use the Open Source Component system template to generate a report. The template includes the following modules:

- Open Source Bill-of-Materials: a complete list of the components detected in your application
- Vulnerable Open Source Components: a list of components with known security issues

This section contains the following topics:

Viewing Reports	242
Generating a Report	245
Scheduling Auto-Generated Reports	249

Templates 250
Data Exports 254

Viewing Reports

There are two ways to view reports in the portal. One way is to go through the **Reports** view, where you can view all reports generated for all applications and releases in your tenant. The other way is to go through the **Applications** view, where you can drill down into each application and view reports pertaining to a specific application or release.

This section contains the following topics:

Viewing All Reports 242
Viewing Application Reports 243
Viewing Release Reports 244

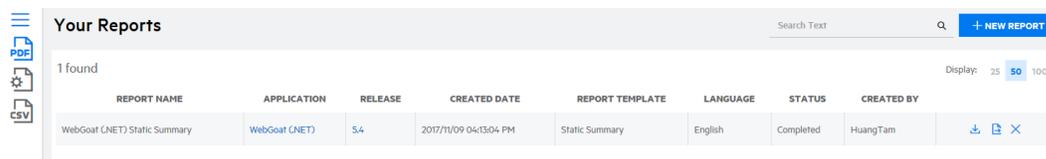

Viewing All Reports

Your Reports page is the default landing page of the Report view, where you can view reports for all your applications at the tenant level.

To view reports at the tenant level:

1. Select the **Reports** view.

Your Reports page appears. The page displays the application and release that the report is for, the date and time of report creation, the report type, the status of the report generation, and the user who generated the report.

The following table describes how to navigate Your Reports page.

Task	Action
Create a report	Click +New Report .
Download a report	Click . The report is downloaded to the local folder specified in your browser settings.
Share a report with a tenant	Click . Sharing a report is available if you have established a relationship with another tenant. See " Vendor Management " on page 319.

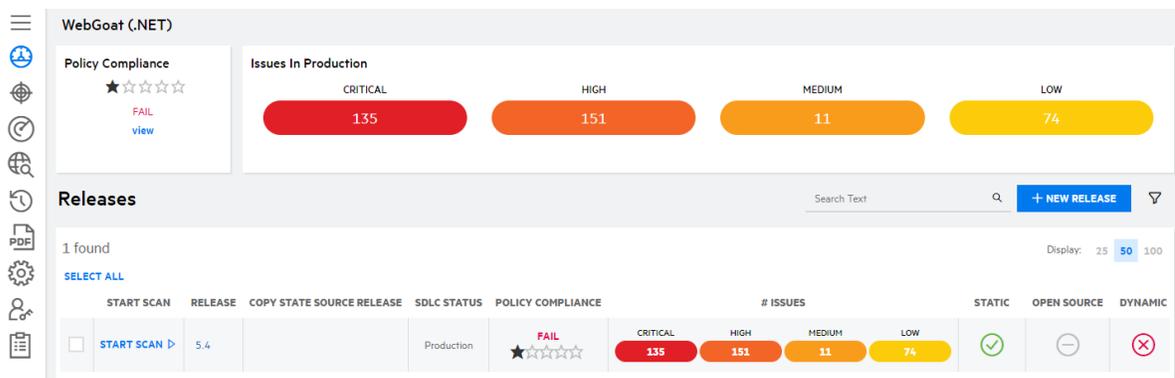

Task	Action
	<p>Note: Sharing a report that contains multiple releases is currently not available.</p>
Delete a report	Click X .
Search the reports list	<p>Type a keyword or phrase in the Search Text field and click Enter. To remove the search results, Click the X.</p> <p>For information on using the Search Text box, see "Searching Applications and Releases" on page 79.</p>

Viewing Application Reports

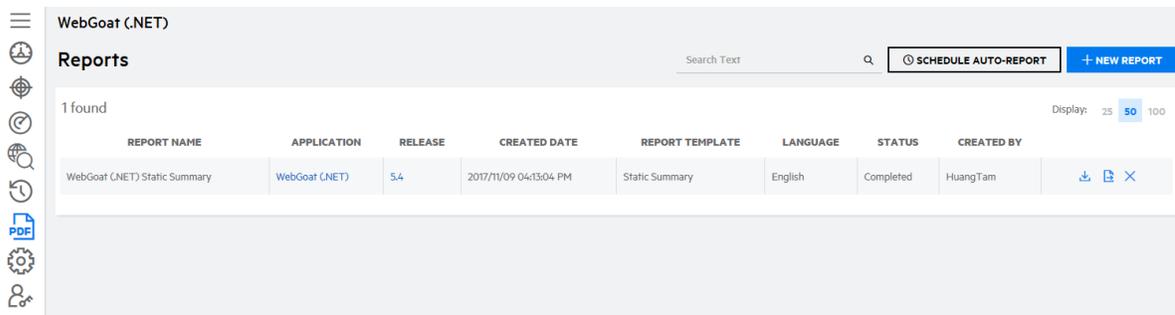

You can view reports for a selected application.

To view reports for an application:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application for which you want to view reports.
The Application Overview page appears.

3. Click **Reports**.
The Reports page, displaying all reports for the application.

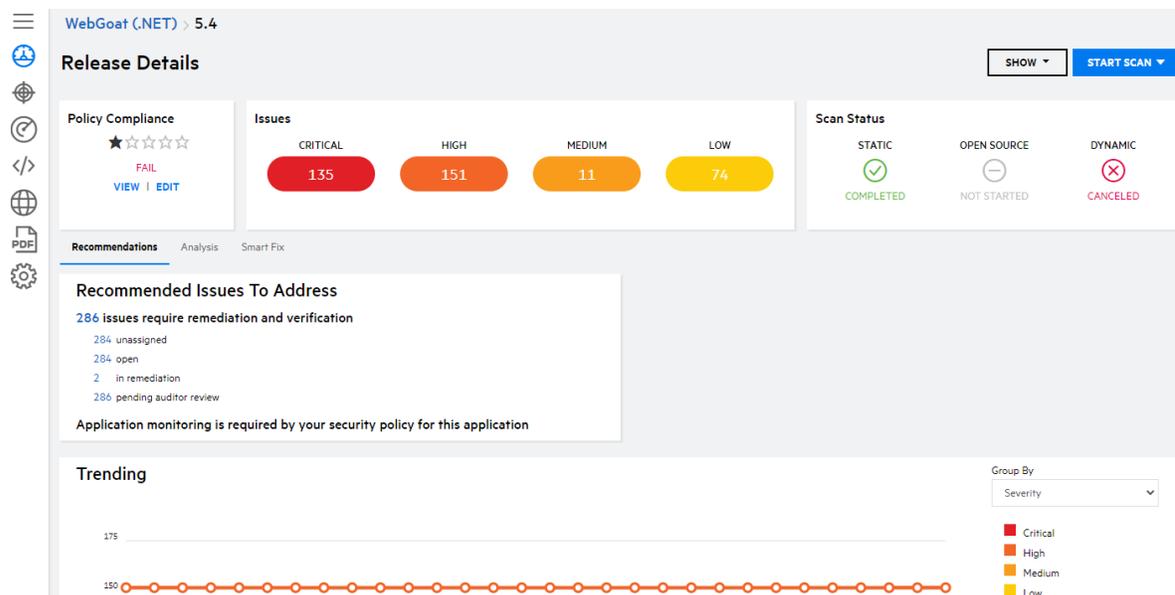

4. Select a report from the list.

Viewing Release Reports

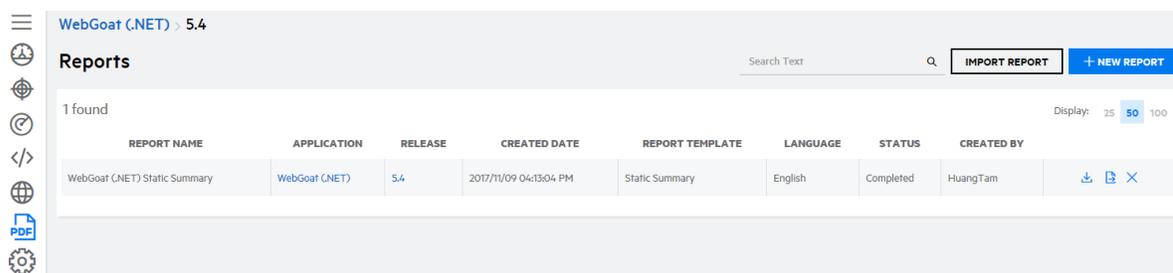

You can drill down into an application and view reports for a selected release.

To view reports for a release:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears.
3. Click the name of the release that you want to view reports for.
The Release Overview page appears.

4. Click **Reports**.
The Reports page appears displaying all reports for the release.

5. Select a report from the list.

Generating a Report

Use a pre-defined report template or a custom report template to generate a report of a release. Reports are available in PDF and HTML formats. In the event a PDF report generation fails, the HTML version is automatically provided in place of the PDF version for your convenience.

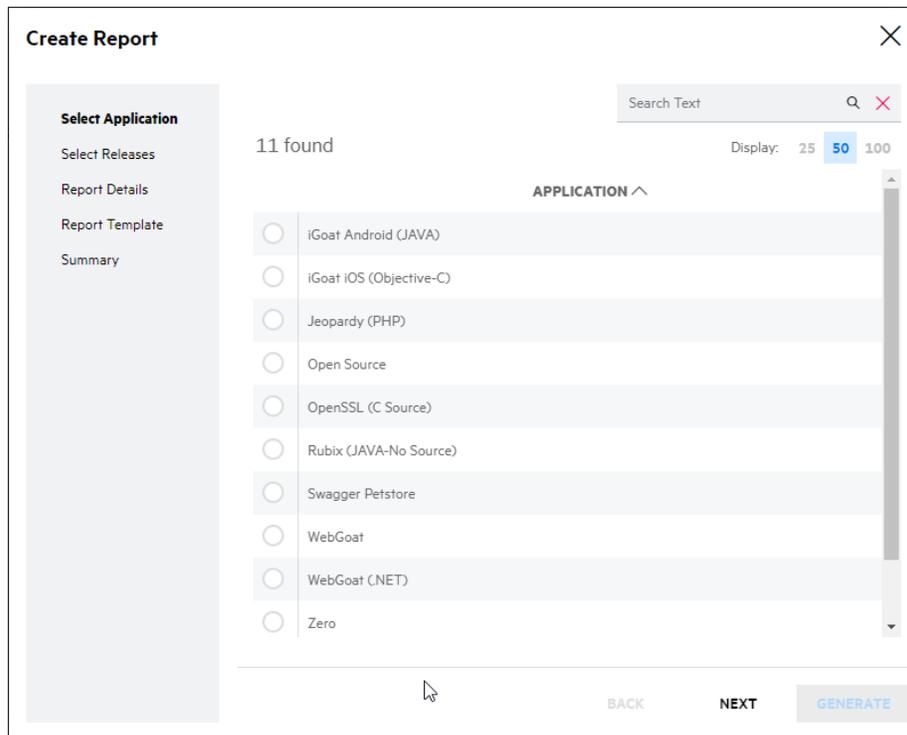

To help avoid failures when generating extremely large PDF reports, you cannot generate PDF reports that include the **Analyst Trace**, **Request/Response**, or **Issues Details** template modules and contain more than 5000 issues. Either generate HTML reports or use an alternative report template with the modules removed and/or with additional filters that reduce the issue count.

Note: To generate reports in a certain language, the language must be selected in your account settings. For more information, see ["Editing Your Account Settings" on page 27](#).

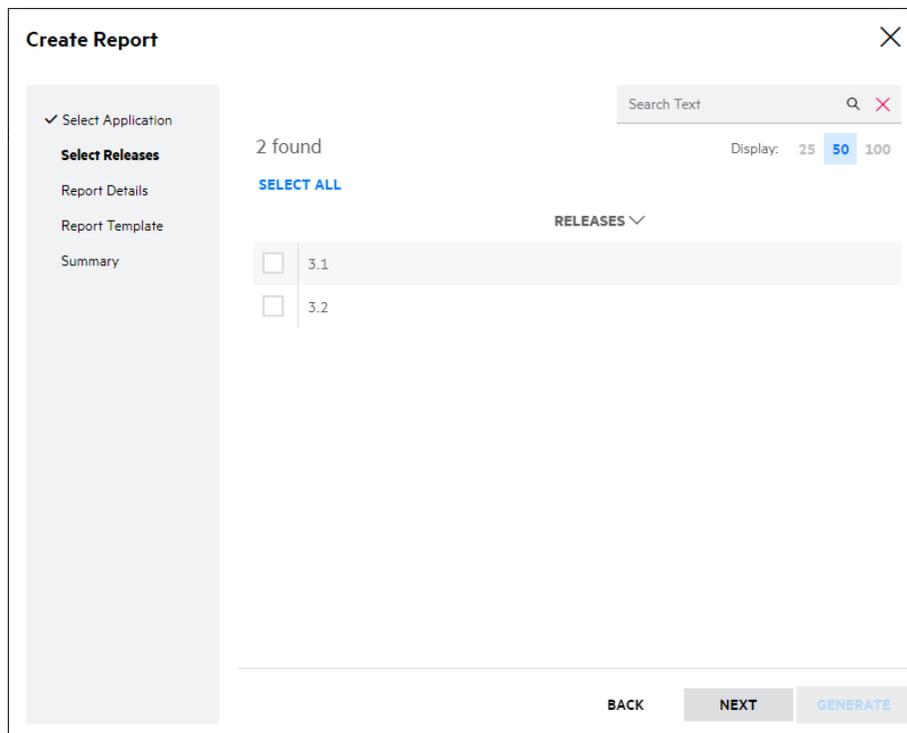

To generate a report:

Note: The following instructions describe how to generate reports on Your Reports page. You can also generate reports on the Application Reports and Release Reports pages.

1. Select the **Reports** view.
Your Reports page appears.
2. Click **+New Report**.
The Create Report wizard appears.
3. **Select Application:** select the application and click **Next**.

4. **Select Releases:** select the releases and click **Next**. If you select multiple releases, a report will be generated for each release and the reports will be packaged in a zip file.

5. **Report Details:** complete the fields and click **Next**. Fields are required unless otherwise noted.

BACK NEXT GENERATE

Field	Description
Report Name	Provide the name of the report.
Notes	Provide notes for the report.
File Type	Select the file type of the report: PDF, HTML.

- Report Template:** select a report template type and click **Next**.
 - System report templates appear in blue; custom report templates appear in black.
 - If your release has only static issue data, only static report templates are available.
 - If your release has only dynamic issue data, only dynamic report templates are available.

7. **Summary:** review the summary of the report and click **Generate**.

You are redirected to the Reports page. The report is available once the "Completed" status appears.

Note: You can click  to delete a report while it is still being generated.

- Click  in the row of the report once it has been generated.
- A PDF or zip file (depending on the file type) is saved to the folder specified in your browser settings.

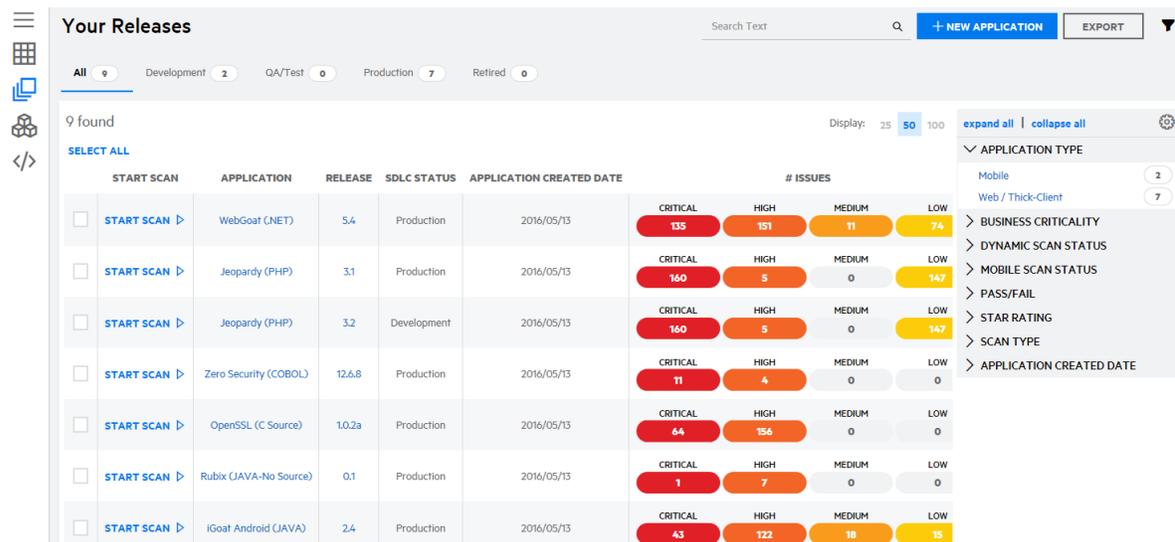

Scheduling Auto-Generated Reports

If you plan to run multiple assessments on the same application and you would like to generate the same reports each time, you can save time by using the auto-generated report function.

To schedule an auto-generated report:

- Select the **Applications** view.

Your Releases grid appears, displaying a list of your releases.

START SCAN	APPLICATION	RELEASE	SDLC STATUS	APPLICATION CREATED DATE	# ISSUES			
<input type="checkbox"/>	WebGoat (.NET)	5.4	Production	2016/05/13	CRITICAL 135	HIGH 151	MEDIUM 11	LOW 74
<input type="checkbox"/>	Jeopardy (PHP)	3.1	Production	2016/05/13	CRITICAL 160	HIGH 5	MEDIUM 0	LOW 147
<input type="checkbox"/>	Jeopardy (PHP)	3.2	Development	2016/05/13	CRITICAL 160	HIGH 5	MEDIUM 0	LOW 147
<input type="checkbox"/>	Zero Security (COBOL)	12.6.8	Production	2016/05/13	CRITICAL 11	HIGH 4	MEDIUM 0	LOW 0
<input type="checkbox"/>	OpenSSL (C Source)	1.0.2a	Production	2016/05/13	CRITICAL 64	HIGH 156	MEDIUM 0	LOW 0
<input type="checkbox"/>	Rubix (JAVA-No Source)	0.1	Production	2016/05/13	CRITICAL 1	HIGH 7	MEDIUM 0	LOW 0

SAVE **CANCEL**

5. Select the report template that will be used to generate a report upon completion of a static scan.
6. Select the report template that will be used to generate a report upon completion of a dynamic or mobile scan.
7. Select the SDLC status check box(es) that will trigger the report generation.
8. Select the report file type from the **File type** list.
9. To automatically distribute the reports to specified recipients, select **Email Report Upon Completion** and in the **Notification List** field, type the email addresses that will receive the reports.
10. Click **Save**.
Your auto-generated report settings are saved.

Templates

Users with the Create Report permission can view, create, edit, and delete templates.

The Templates page displays a list of existing report templates, with links for viewing, copying / editing, and deleting templates. There are two types of report templates: system and custom.

System report templates exist for Application Monitoring, Static, Dynamic, Hybrid, and Mobile reports as well as ones for PCI, STIG, and FISMA compliance reports. System templates can be copied and suppressed, but not edited or deleted.

Fortify on Demand provides a **Template Wizard** for creating custom report templates. You can configure the report modules and filters to include in the template and use it to generate reports containing the information most useful to your organization. The custom report templates can be edited and deleted.

Use case: If your report is for high-level management review and the people reading it do not want to see the details of your security assessment, you can select the **Static Summary** template. It includes: a title page, an executive summary, an issue breakdown, a list of issues by analysis type, and the OWASP Top 10. It does not include PCI reporting, comments on the issue details, or an analysis trace report (unless you add those).

This section covers the following topics:

Creating a Custom Report Template	251
Editing a Custom Report Template	253
Deleting a Custom Report Template	254
Suppressing a System Report Template	254

Creating a Custom Report Template

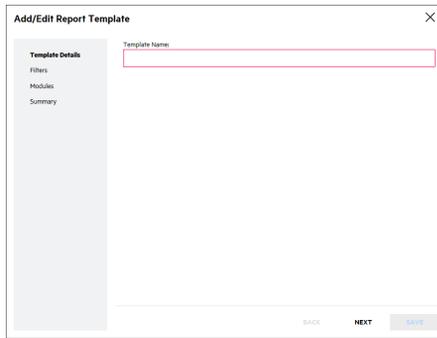

You can create a custom report template by either creating a report template from scratch or starting with one of the system template and modifying it to suit your needs.

To create a custom report template:

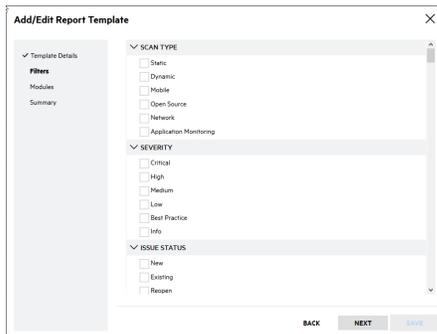

1. Select the **Reports** view.
2. Click the **Templates** icon.
The Templates page appears.
3. Perform one of the following actions:
 - Click **+New Template** to create a template from scratch.
 - Click the  icon in the desired system template row to clone the template.

The Add/Edit Report Template wizard appears.

4. **Template Details:** in the **Template Name** field, type the name of the new template and click **Next**.

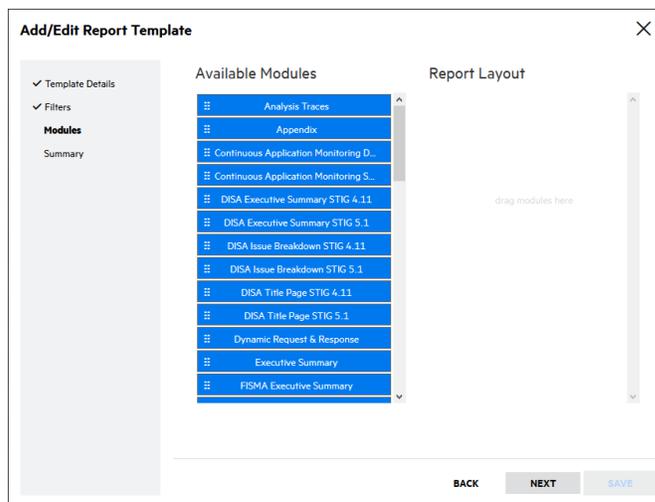

5. **Filters:** select the desired filters and click **Next**. Fields are required unless otherwise noted.

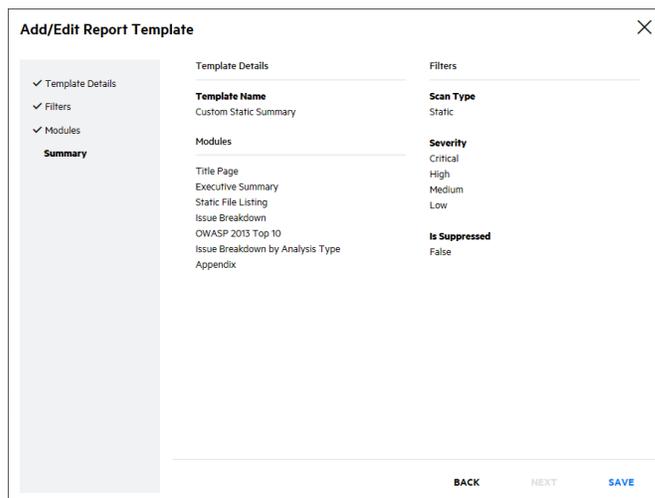

Field	Description
Scan Type	Scan type
Severity	(Optional) Severity of the issues
Issue Status	(Optional) Status of the issues (New, Existing, Reopen)
Developer Status	(Optional) Developer status of the issues
Auditor Status	(Optional) Auditor status of the issues
Issue Age	(Optional) Days since the issues were first introduced
Category	(Optional) Vulnerability category of the issues
Is Suppressed	(Optional) Suppression state of issues (default value is False)

6. **Modules:** select the report modules to include in the template and click **Next**.

- Drag the modules that you want to include from the **Available Modules** column to the **Report Layout** column. The modules that are available depend on the selected scan type.
- Drag and drop items in the **Reports Layout** column to change the order of the modules in the generated report.

7. **Summary:** review the summary of the template and click **Save**.

The custom report template appears in the template list. If necessary, run a search of the name to find the template.

Editing a Custom Report Template

You can edit an existing custom report template through the Add/Edit Report Template wizard.

To edit a custom report template:

1. Select the **Reports** view.
2. Click **Templates**.
The Templates page appears.
3. Click the  icon in the row of the template that you want to edit.
The Add/Edit Report Template wizard appears.

4. Edit the fields in each step of the wizard as needed. For more information, see "[Creating a Custom Report Template](#)" on page 251

Note: Removal of deprecated modules is permanent and cannot be undone after the template is saved.

5. Click **Save**.
The template changes are saved.

Deleting a Custom Report Template

You can delete any of your custom report templates in your tenant.

To delete a custom report template:

1. Select the **Reports** view.
2. Click **Templates**.
The **Templates** page appears.
3. Locate the custom template that you want to delete in the template list.
4. Click the  icon in the template row.
A confirmation message appears.
5. Click **Yes** to delete the template.

Suppressing a System Report Template

Security Leads can prevent users in the portal from viewing or using a system report template in report generation by suppressing the system template.

1. Select the **Reports** view.
2. Click **Templates**.
The **Templates** page appears.
3. Click the  icon next to the system template that you want to suppress.
A confirmation message appears.
4. Click **Yes** to confirm the system report template suppression.
The system report template is shown as suppressed. You can click the  icon to restore the system report template to users in the portal.

Data Exports

A data export is a complete list of relevant data for a specific category (applications, releases, scans, issues, or entitlement consumption) across the tenant. Users with the Export Data permission can generate data exports. The data export is provided as a CSV file.

This section covers the following topics:

Viewing Data Exports

To view data exports:

1. Click the **Reports** view.
Your Reports page appears
2. Click **Data Export**.
The Data Export page appears.

Data Export					+ NEW DATA EXPORT	
44 found					Display: 25 50 100

The following table describes how to navigate the Data Export page.

Task	Action
Create a data export template	Click +Create Data Export . For more information, see "Creating a Data Export Template" on the next page .
Generate a data export using an existing template	Click ▶ in the row of a template. For more information, see "Generating a Data Export" on page 260 .
Edit a data export template	Click ✎ in the row of a template.
Delete a data export template	Click ✕ in the row of a template. You cannot delete a template if it has an existing data export.
View generated data exports for a template	Click > in the row of a template to view files that have been generated in the last three months for the template.

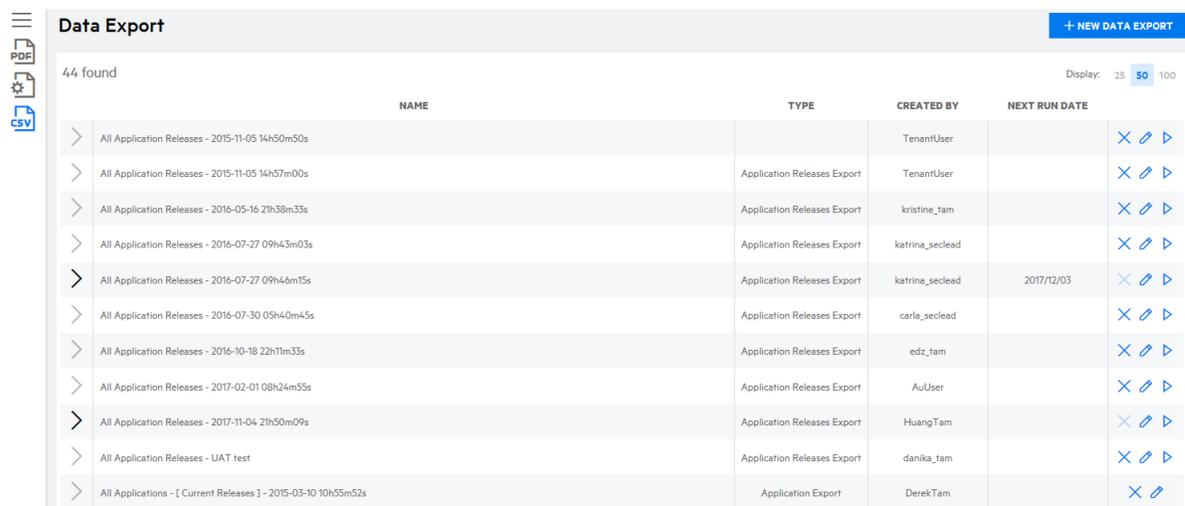

Task	Action
Delete a data export	Click  in the row of a data export. If a data export is still running, it will be canceled.
Download a data export file	Click  in the row of a data export.

Creating a Data Export Template

A data export template is used as a basis for generating data exports. You can apply filters as well as schedule recurring data exports.

To create a data export template:

1. Click the **Reports** view.
Your Reports page appears
2. Click **Data Export**.
The Data Export page appears.

Data Export					+ NEW DATA EXPORT

Field	Description
Name	Type the name of the data export template.
Template	<p>Select a data export template type:</p> <ul style="list-style-type: none"> • Applications - list of applications • Application Releases - list of releases • Scans - list of scans • Issues -list of issues • Entitlement Consumption - list of scans where entitlements were consumed, including deleted, canceled, and in progress scans. <div style="background-color: #f0f0f0; padding: 5px; margin-top: 10px;"> <p>Note: Filters are not available for the Entitlement Consumption template type.</p> </div>
Schedule	<p>Select one of the following options for scheduling the data export:</p> <ul style="list-style-type: none"> • Queue Now - queues the data export immediately • Recurring - generates the data export according to a schedule that you will specify in the wizard

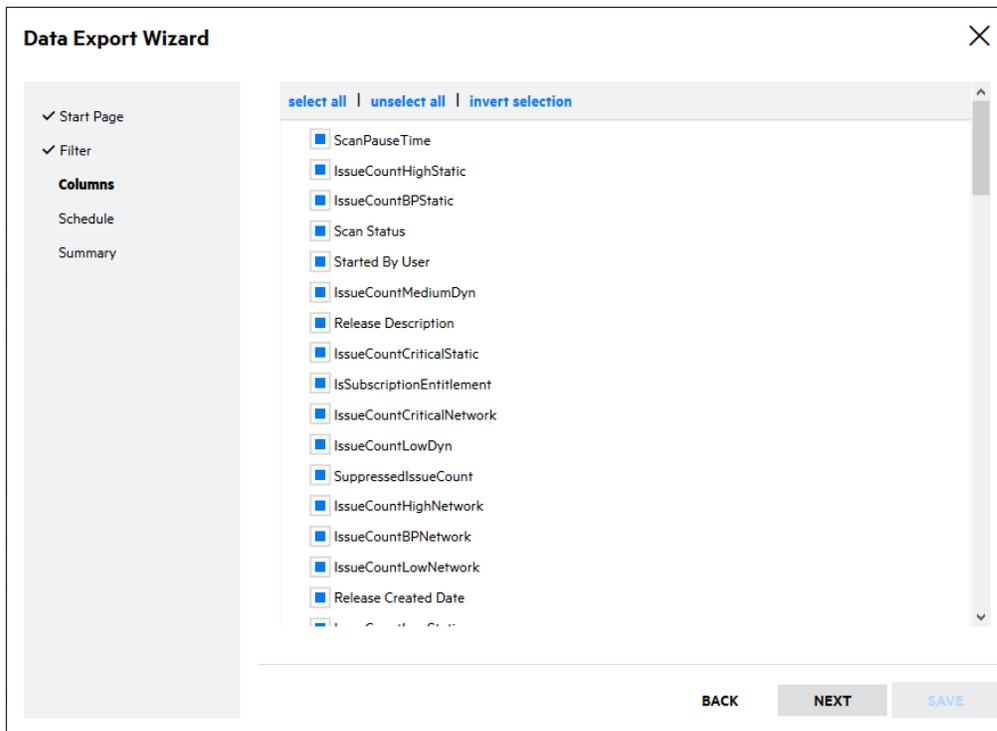

When this option is selected, the **Enabled** check box is available. Select the check box to have the data export automatically generated according to the schedule (default). Otherwise, you must manually generate the data export.

5. **Filter:** select the desired filters and click **Next**. The available filters are based on the template type selected.

The screenshot shows the 'Data Export Wizard' window. On the left is a sidebar with navigation options: 'Start Page' (checked), 'Filter', 'Columns', 'Schedule', and 'Summary'. The 'Filter' section is active, displaying a list of filter categories with expandable arrows: 'SCAN START DATE', 'ASSESSMENT TYPE', 'ENTITLEMENTTYPE', 'ISREMIATIONSCAN', 'SCAN METHOD TYPE', 'SCAN STATUS', 'SCAN TYPE', and 'SDLC STATUS'. The 'SCAN START DATE' filter is expanded, showing 'From:' and 'To:' input fields. The 'From:' field contains the date '2020/08/01'. At the top of the filter list, there are links for 'expand all' and 'collapse all'. At the bottom of the wizard, there are three buttons: 'BACK', 'NEXT', and 'SAVE'.

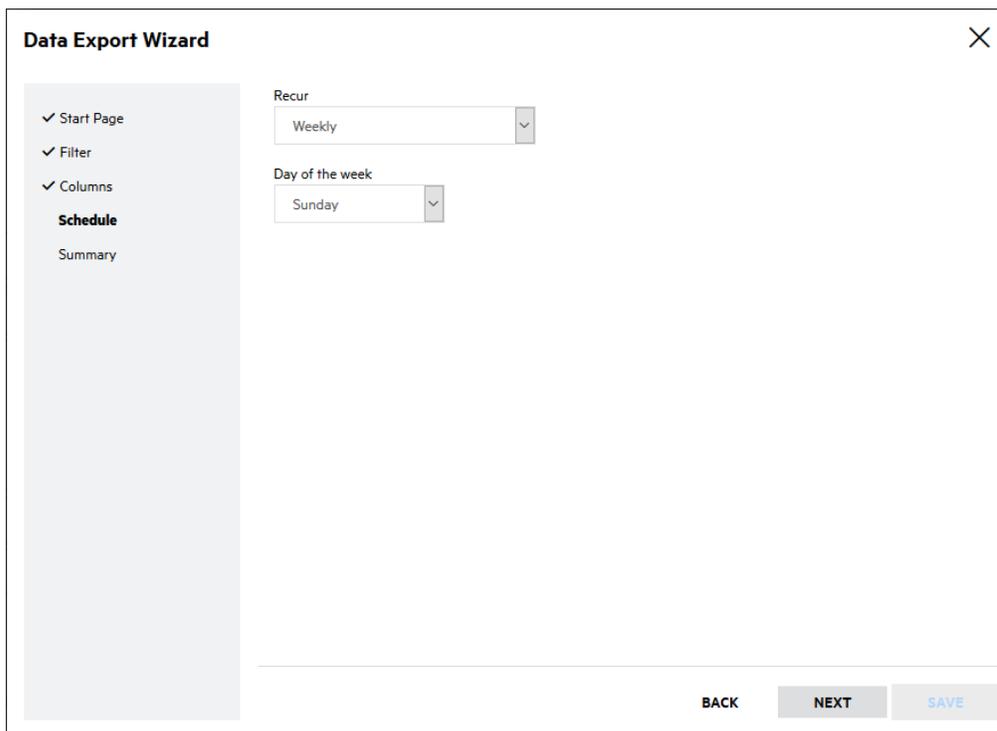

Note: The **Scan Start Date** filter is required for the scans data export; the **Introduced Date** filter is required for the issues data export.

6. **Columns** (available for the scans and issues data exports): select the columns to include in the data export and click **Next**.

7. **Schedule** (available for recurring data exports): select the repeat frequency and the day or date to generate the data export. Click **Next**.

Note: Data exports run at 24:00 server time.

8. Click **Next**.

9. **Summary:** review the summary of the data export and click **Save**.
The data export template appears in the data export list.

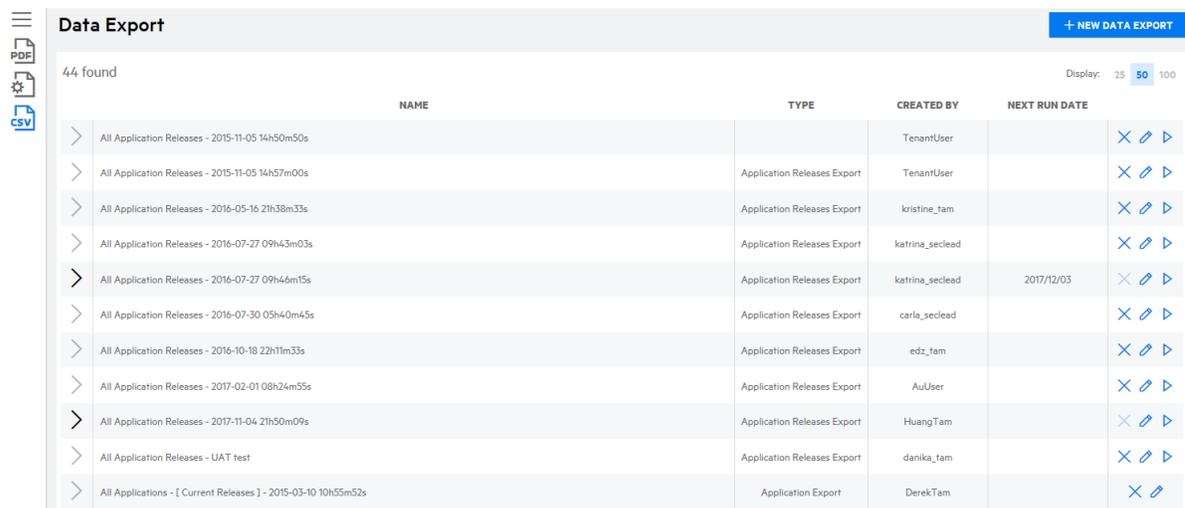

Generating a Data Export

You generate a data export using an existing data export template.

Note: A data export only contains results of completed assessments at the time the data export is generated, with the exception of the Entitlement Consumption data export.

To generate a data export:

1. Click the **Reports** view.
Your Reports page appears
2. Click **Data Export**.
The Data Export page appears.

The screenshot shows the 'Data Export' page with a table of 44 found export templates. The table has columns for NAME, TYPE, CREATED BY, NEXT RUN DATE, and action icons (cancel, edit, refresh). A '+ NEW DATA EXPORT' button is in the top right. On the left, there are icons for PDF, CSV, and a menu.

	NAME	TYPE	CREATED BY	NEXT RUN DATE	
>	All Application Releases - 2015-11-05 14h50m50s		TenantUser		✕ ↻ ▶
>	All Application Releases - 2015-11-05 14h57m00s	Application Releases Export	TenantUser		✕ ↻ ▶
>	All Application Releases - 2016-05-16 21h38m33s	Application Releases Export	kristine_tam		✕ ↻ ▶
>	All Application Releases - 2016-07-27 09h43m03s	Application Releases Export	katrina_seclead		✕ ↻ ▶
>	All Application Releases - 2016-07-27 09h46m15s	Application Releases Export	katrina_seclead	2017/12/03	✕ ↻ ▶
>	All Application Releases - 2016-07-30 05h40m45s	Application Releases Export	carla_seclead		✕ ↻ ▶
>	All Application Releases - 2016-10-18 22h11m33s	Application Releases Export	edz_tam		✕ ↻ ▶
>	All Application Releases - 2017-02-01 08h24m55s	Application Releases Export	AuUser		✕ ↻ ▶
>	All Application Releases - 2017-11-04 21h50m09s	Application Releases Export	HuangTam		✕ ↻ ▶
>	All Application Releases - UAT test	Application Releases Export	danika_tam		✕ ↻ ▶
>	All Applications - [Current Releases] - 2015-03-10 10h55m52s	Application Export	DerekTam		✕ ↻

3. Click ▶ in the row of a data export template.
The data export is queued for generation.
4. Click > next to the template to view the generated data exports.
A "Processing" status appears until the data export is available.

Note: You can click ✕ to cancel a long-running data export.

5. Click ⬇️ in the row of the data export once it has been generated.
A CSV file is saved to the folder specified in your browser settings.

Chapter 7: Administration

Administration of your tenant is performed from the portal. Access and privileges are determined by the user role.

This section contains the following topics:

- [Portal Management](#)261
- [User Management](#)277
- [Policy Management](#)301
- [Single Sign-On \(SSO\)](#)309
- [Vendor Management](#)319

Portal Management

Security Leads can administer the portal, including configuring portal settings, configuring security, and reviewing the administration event log.

This section covers the following topics:

- [Configuring User Security](#)261
- [Managing API Keys](#)264
- [Managing Attributes](#)268
- [Managing Fortify on Demand Connect Networks](#)273
- [Viewing Entitlements](#)275
- [Viewing the Administration Event Log](#)276

Configuring User Security

Security Leads can configure the following user security settings:

- Password reset frequency
- Maximum personal access token lifetime
- Two-factor authentication
- IP restrictions

Note: The IP restrictions feature is disabled for 24.3

To configure user security settings:

1. Select the **Administration** view.
The User Settings page appears.
2. Click **Settings**.
The Settings page appears.
3. Select the **Security** tab.

Settings

Attributes **Security** API Application Defender Sonatype

Password Reset Frequency (1 to 9999 days)

1 Days

Max Personal Access Token Lifetime (1 to 9999 days)

180 Days

Task	Procedure						
<p>Add an IP address to the allowed list</p>	<p>Click +Add and type a name for the IP address (special characters are not allowed) and the IP address. Valid IP address forms are 127.0.0.1, 127.0.0.*, and 127.0.0.[0-255].</p>						
<p>Remove an existing IP address from the allowed list</p>	<p>Click x next to an IP address in the Allow IP Addresses list.</p>						

- Click **Save**.
Your user security settings are saved.

Managing API Keys

API keys are used to authenticate to the Fortify on Demand API. Security Leads can manage API keys.

Note: This section covers the management of API keys. For information on using the Fortify on Demand API, see ["Fortify on Demand API" on page 324](#)

This section covers the following topics:

Creating an API Key	264
API Key Roles	265
Editing or Deleting an API Key	266

Creating an API Key

Security Leads can create API keys.

To create an API key:

- Select the **Administration** view.
The User Management page appears.
- Click **Settings**.
The **Attributes** tab of the Settings page appears.
- Select the **API** tab.

Settings								+ ADD KEY			
Attributes		Security		API							
NAME	API KEY	GRANT TYPE	ROLE	LAST LOGIN DATE	LAST LOGIN IP ADDRESS	AUTHORIZED					
ManageApplications	ee2828cb-ef1c-4ca6-8ea2-f643bd0eab78	Client Credentials	Manage Applications	2022/04/14	15.122.108.150	Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATION	
ReadOnly	c6599566-be40-4612-9804-6cece1a97b83	Client Credentials	Read Only			Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATION	
ReadOnly for 22.1	95f2661d-3ff-4edf-bfa9-dad49290b823	Client Credentials	Read Only	2022/04/07	15.122.101.250	Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATION	
SecurityLead	ffc06c71-2f45-4f74-a9bf-d76cb8935f7f	Client Credentials	Security Lead			Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATION	
StartScans	ec527d4a-4737-4e9f-8d26-9b0aa0ae9cc2	Client Credentials	Start Scans			Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATION	

- Click **+Add Key**.
The **Add/Edit Key for Application** window opens.

5. Complete the fields. Fields are required unless otherwise noted.

Field	Description
Application Name	Name of your application.
Role	Select the role that has the appropriate API Key permissions. See "API Key Roles" below.
Authorize app to use API	Select Yes to enable the key. Select No to disable key if it is not in use.

6. Click **Save**.
The Secret Key window opens.
7. Copy your Base64 encoded secret code. The secret code is only shown once.
8. Click **Close**.
The new API key appears in the API key list.

Note: By default, an API key has access to all applications. See ["Editing or Deleting an API Key" on the next page](#) for information on assigning applications to an API key.

API Key Roles

A dedicated API key is associated with a role having a predefined, unmodifiable set of permissions. API keys have access to all applications in a tenant; applications can be assigned to API keys to update application access.

The following table lists the permission set of each API key role.

Role	Permissions	Usage Example
Security Lead	All permissions	Full access to all AppSec program functionality and associated

Role	Permissions	Usage Example
		infrastructure
Manage Applications	View Third Party Apps, Manage Applications, Audit Issues, Create Reports, Start Static/Dynamic/Mobile Scans	Integration with full-featured custom or internal systems without the ability to manage users
Start Scans	View Third Party Apps, View Applications, View Issues, View Reports, Start Static/Dynamic/Mobile Scans	Continuous integration and build servers
Read Only	View Third Party Apps, View Applications, View Issues, View Reports	Data import into vulnerability management or Governance, Risk Management, and Compliance (GRC) systems

Editing or Deleting an API Key

Security Leads can perform the following tasks for API keys:

- Generate a new secret
- Edit API key settings
- Assign and unassign applications

Note: API keys with the Security Lead role have access to all applications; this cannot be changed.

- Delete API keys

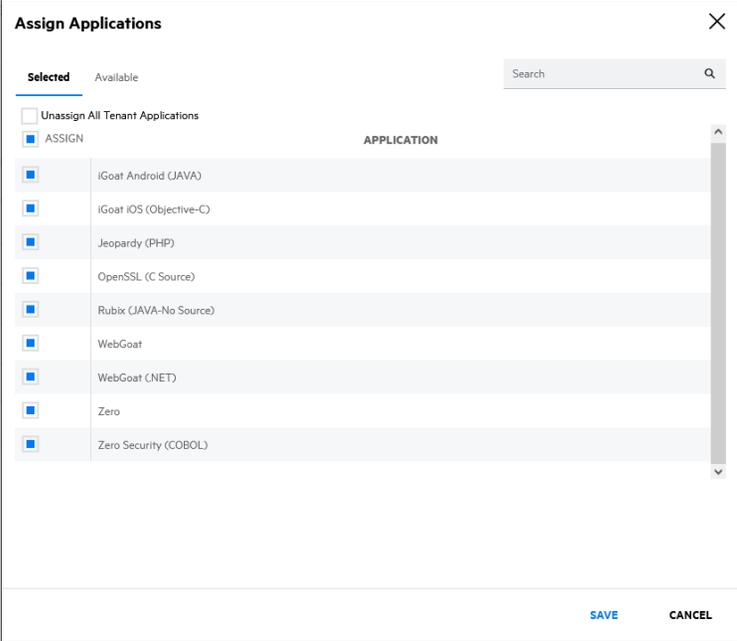

To make changes to an API key:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Settings**.
The **Attributes** tab of the Settings page appears.
3. Select the **API** tab.

NAME	API KEY	GRANT TYPE	ROLE	LAST LOGIN DATE	LAST LOGIN IP ADDRESS	AUTHORIZED				
ManageApplications	ee2828cb-ef1c-4ca6-8ea2-f643bd0eab78	Client Credentials	Manage Applications	2022/04/14	15.122.108.150	Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATIONS
ReadOnly	c6599566-be40-4612-9804-6cece1a97b83	Client Credentials	Read Only			Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATIONS
ReadOnly for 22.1	95f2661d-3ff1-4edf-bfa9-dad49290b823	Client Credentials	Read Only	2022/04/07	15.122.101.250	Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATIONS
SecurityLead	ffc06c71-2f45-4f74-a9bf-d76cb8935f7f	Client Credentials	Security Lead			Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATIONS
StartScans	ec527d4a-4737-4e9f-8d26-9b0aa0ae9cc2	Client Credentials	Start Scans			Yes	NEW SECRET	EDIT	DELETE	ASSIGN APPLICATIONS

4. You can perform the following tasks:

Task	Procedure
Generate new secret	<ol style="list-style-type: none"> Click New Secret. A confirmation message appears Click Yes. This will void the current secret.
Edit API key settings	<ol style="list-style-type: none"> Click Edit. The Add/Edit Key for Application window opens. Edit the fields as needed.
Delete API key	<ol style="list-style-type: none"> Click Delete. A confirmation message appears. Click Yes.
Assign applications to API key	<ol style="list-style-type: none"> Click Assign Applications. Select the Available tab.  Perform the following actions to select applications: <ul style="list-style-type: none"> ○ Select the check box next to individual applications. ○ Select the ASSIGN check box to select displayed applications. ○ Select the Assign All Tenant Applications check box to select all applications. <p>You can use the search field to filter the application list.</p> Click Save.

Task	Procedure
Unassign applications from API key	<p>a. Click Assign Applications.</p> <p>b. Select the Selected tab.</p> <div data-bbox="672 415 1409 1056"></div> <p>c. Perform the following actions to remove applications:</p> <ul style="list-style-type: none">○ Clear the check box next to individual applications.○ Clear the ASSIGN check box to remove displayed applications.○ Select the Unassign All Tenant Applications check box to remove all applications. <p>You can use the search field to filter the application list.</p> <p>d. Click Save.</p>

Managing Attributes

Attributes provide additional information about applications; they are used as filters to help track applications, releases, and issues. Attributes are for informational purposes and do not affect the assessment process in any way.

Security Leads can add, edit, and delete attributes. System-level attributes are pre-defined and can not be deleted; certain system attributes are editable.

The following attribute types are available:

- Application attributes. Application attributes are both system and custom attributes.
- Microservice attributes. Microservice attributes are custom attributes.
- Release attributes. Release attributes are system attributes.
- Issue attributes. Issue attributes are system attributes. The following issue attributes are editable: **Auditor Status (Open)**, **Auditor Status (Closed)**, **Developer Status (Open)**, and **Developer Status (Closed)**.

This section covers the following topics:

Adding an Attribute	269
Editing an Attribute	271
Deleting an Attribute	272

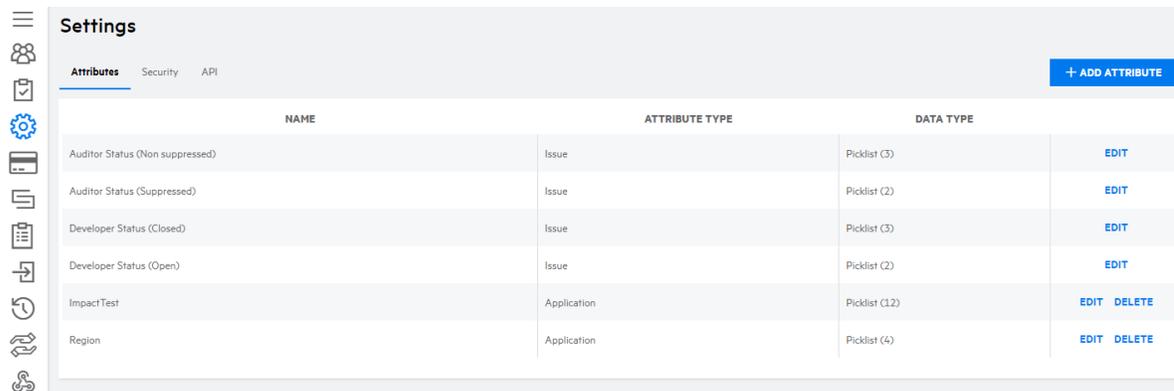

Adding an Attribute

Security Leads can add microservice and application attributes.

To add an attribute:

1. Select the **Administration** view.
The User Settings page appears.
2. Click **Settings**.

The **Attributes** tab of the Settings page appears.

NAME	ATTRIBUTE TYPE	DATA TYPE	
Auditor Status (Non suppressed)	Issue	Picklist (3)	EDIT
Auditor Status (Suppressed)	Issue	Picklist (2)	EDIT
Developer Status (Closed)	Issue	Picklist (3)	EDIT
Developer Status (Open)	Issue	Picklist (2)	EDIT
ImpactTest	Application	Picklist (1,2)	EDIT DELETE
Region	Application	Picklist (4)	EDIT DELETE

3. Click **+Add Attribute**.

The Attribute Definition window appears.

4. Complete the following fields. Fields are required unless otherwise noted.

Field	Description
Name	Specify the name of the new attribute.
Attribute Type	Select the attribute type.
Data Type	<p>Select the data type:</p> <ul style="list-style-type: none"> • Picklist: this attribute type allows selection of a value from a list. You need to define the possible values for the attribute, which appear as a drop-down list for that attribute. • Text: this attribute type allows free form text. This is the best type to use if you want to assign a ticket number or other identifier that is specific to each new release. • Boolean: this attribute type allows selection of binary values (true/false). • Date: this attribute type allows selection of a date from a calendar. • User: this attribute type allows selection of a user from a list of all active users for the tenant.
Required (optional)	Select the check box to designate the attribute as required. This field is not available for issue attributes.
Editable only by Security Leads (optional)	<p>Select the check box to restrict its usage to Security Leads. This option supersedes the Manage Application permission.</p> <p>Note: Selecting this precludes making an attribute required, as it would break the Create Application permission for non-Security Leads.</p>

5. Click **Save**.

The new attribute appears in the attribute list.

Editing an Attribute

Security Leads can edit picklist values and certain settings for existing attributes. You can not change the attribute name or attribute type.

Note: You can edit the values of issue attributes. For the **Developer Status (Open)** attribute, the default values of **Open** and **In Remediation** are non-editable.

To edit an attribute:

1. Select the **Administration** view.

The User Settings page appears.

2. Click **Settings**.

The **Attributes** tab of the Settings page appears.

NAME	ATTRIBUTE TYPE	DATA TYPE	
Auditor Status (Non suppressed)	Issue	Picklist (3)	EDIT
Auditor Status (Suppressed)	Issue	Picklist (2)	EDIT
Developer Status (Closed)	Issue	Picklist (3)	EDIT
Developer Status (Open)	Issue	Picklist (2)	EDIT
ImpactTest	Application	Picklist (1,2)	EDIT DELETE
Region	Application	Picklist (4)	EDIT DELETE

3. Click **Edit** in the row of the attribute that you want to edit.

The **Attribute Definition** page displays.

4. Edit the fields as needed. The fields vary depending on the data type.

Data Type	Available Actions
Picklist	<ul style="list-style-type: none"> • Click + to add a new value. • Use the ^ v to reorder the listed values. • Click ⌂ to sort values alphabetically. • Click x to remove a value from the list.
Picklist, Text, Boolean, Date, User	<p>Select or deselect the following check boxes:</p> <ul style="list-style-type: none"> • Required: designate the attribute as required. • Editable only by Security Leads: Restrict attribute usage to Security Leads. This option supersedes the Manage Application permission. <div style="background-color: #f0f0f0; padding: 5px;"> <p>Note: Selecting this precludes making an attribute required, as it would break the Create Application permission for non-Security Leads.</p> </div>

5. Click **Save**.

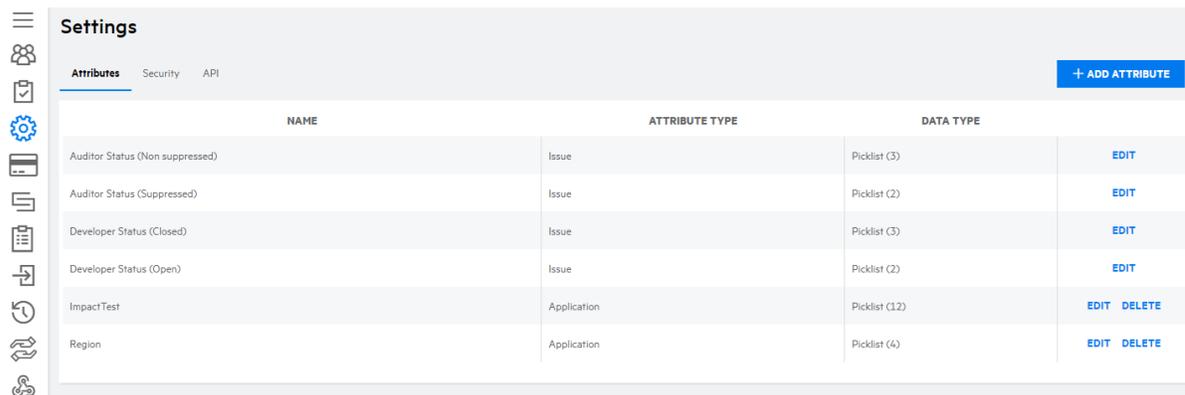

Your attribute changes are saved

Deleting an Attribute

You can delete custom attributes. System-level attributes cannot be deleted.

To delete an attribute:

1. Select the **Administration** view.
The User Settings page appears.
2. Click **Settings**.
The **Attributes** tab of the Settings page appears.

The screenshot shows the 'Settings' page with the 'Attributes' tab selected. A table lists various attributes with their names, types, and data types. Each row has an 'EDIT' button, and the last two rows have both 'EDIT' and 'DELETE' buttons.

NAME	ATTRIBUTE TYPE	DATA TYPE	
Auditor Status (Non suppressed)	Issue	Picklist (3)	EDIT
Auditor Status (Suppressed)	Issue	Picklist (2)	EDIT
Developer Status (Closed)	Issue	Picklist (3)	EDIT
Developer Status (Open)	Issue	Picklist (2)	EDIT
ImpactTest	Application	Picklist (12)	EDIT DELETE
Region	Application	Picklist (4)	EDIT DELETE

3. Click **Delete** in the row of the attribute that you want to edit.
A confirmation message appears.
4. Click **Yes**.
The attribute and all associated values are deleted.

Managing Fortify on Demand Connect Networks

Fortify on Demand Connect is used to establish site-to-site VPN for dynamic assessments. Security Leads can manage Fortify on Demand Connect networks, which are used to register VPN clients with the VPN server.

Note: Fortify on Demand Connect is available for preview in a sandbox environment. Contact support if you are interested in trying out Fortify on Demand Connect.

Adding a Fortify on Demand Connect Network

Security Leads can add Fortify on Demand Connect networks.

To add a Fortify on Demand Connect network:

1. Select the **Administration** view.
The User Settings page appears.
2. Click **Settings**.
The **Attributes** tab of the Settings page appears.
3. Select the **Fortify on Demand Connect** tab.

4. Click **+Add Network**.

The Add Network window appears.

A screenshot of the "Add Network" dialog box. It has a title bar with "Add Network" and a close button (X). The dialog contains four text input fields: "Network Name", "User Name", "Password", and "Confirm Password". At the bottom of the dialog, there are two buttons: "SAVE" and "CANCEL".

5. Complete the following fields. Fields are required unless otherwise noted.

Field	Description
Network Name	Specify the network name.
User Name	Specify a Fortify on Demand Connect network username.
Password	Specify a Fortify on Demand Connect network password. Allowed characters are upper and lower case letters and numbers.
Confirm Password	Specify the password again.

6. Click **Save**.

The new network appears in the network list. The **View Docker Commands** link is available that contains the code for the docker command to run the VPN client and initialize the connection between the VPN client and the VPN server.

Deleting a Fortify on Demand Connect Network

Security Leads can delete Fortify on Demand Connect networks.

Note: Fortify on Demand Connect networks cannot be edited. If you need to update an existing network, you need to delete the network and add a new one.

To delete a Fortify on Demand Connect network:

1. Select the **Administration** view.
The User Settings page appears.
2. Click **Settings**.
The **Attributes** tab of the Settings page appears.
3. Select the **Fortify on Demand Connect** tab.

4. Click **Delete** in the row of the network that you want to delete.
A confirmation message appears.
5. Click **Yes**.
The network is deleted.

Viewing Entitlements

Security Leads can view a list of expired and active entitlements for the tenant as well as add descriptions to entitlements.

To view entitlements for the tenant:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Entitlements**.

The Entitlement page appears. The **Fortify Entitlements** tab displays Fortify on Demand entitlements; the **Sonatype Entitlements** tab displays Sonatype entitlements; the **Debricked Entitlements** tab displays Debricked entitlements.

ENTITLEMENT ID	QUANTITY PURCHASED	QUANTITY CONSUMED	START DATE	END DATE	DESCRIPTION	ACTION
6418	0	2	2022/05/17	2022/05/17		EDIT
5575	500	13	2017/11/10	2024/12/31		EDIT
5689	500	1	2018/05/03	2025/12/31	Bucket A	EDIT

3. You can perform the following task:

Task	Procedure
Add or edit the entitlement description	Click Edit in the row of an entitlement and provide a description. The description is limited to 50 characters.

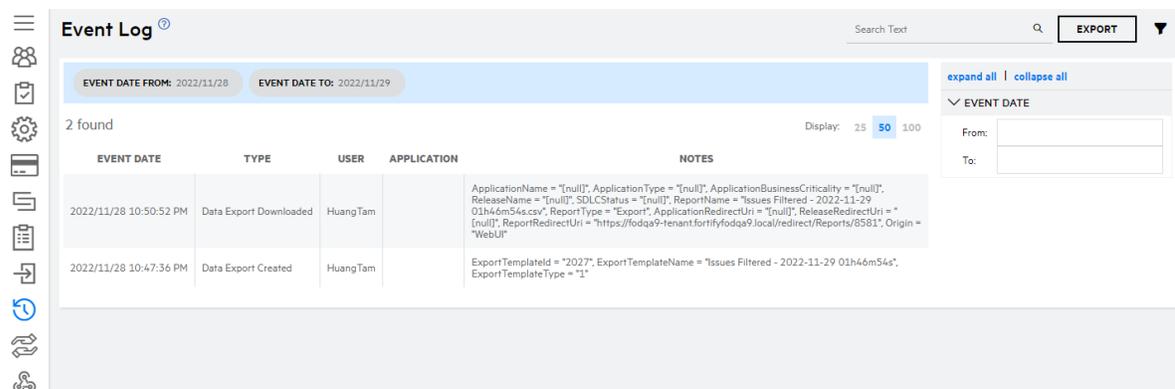

Viewing the Administration Event Log

Security Leads can view the administration event log. The administration event log logs all application-related events as well as the following administration-related events:

- user login success or failure and user logout
- user creation, updates, and deletion
- group creation, updates, and deletion
- role creation, updates, and deletion
- dashboard and event log exports
- API Key and personal access token creation, updates, deletion, and new secret generation
- API authentication success or failure
- Changes to administration settings and SSO settings

To view the administration event log:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Event Log**.
The Event Log page appears.

3. You can perform the following tasks:

Task	Action
Export the event log of the last 13 months	Click Export . A .csv file is saved locally to the folder specified in your browser settings.
Search the event log	Type a keyword or phrase in the search text field and click Enter .

Task	Action
Hide or display the filter list	Click ▼.
Expand or collapse filters	Click  or the arrow next to the filter name.
Remove applied filters	Click X or click Clear Filters at the top of the page. The filter is set to the last 24 hours by default.

Related Topics:

For information about viewing events related to a specific application, see ["Viewing the Application Event Log" on page 55](#).

User Management

Security Leads and users with the Manage Users permissions can manage users in Fortify on Demand. Security Leads can perform all user administration tasks. Users with the Manage Users permissions can manage user accounts and groups, but cannot manage roles.

This section covers the following topics:

Roles and Permissions	277
Users	288
Groups	295

Roles and Permissions

User actions in Fortify on Demand are controlled by roles. Roles are collections of permissions that specify the actions that can be performed. Each user is assigned to a specific role. Security Leads can manage roles, including assigning users to roles and creating, editing, and deleting roles.

Fortify on Demand is deployed with six default roles. Organizations can also define custom roles to better serve their needs. Custom roles can be used to align user roles with existing roles in an organization or expand or limit user responsibilities. Small organizations might want roles with increased permissions; large or highly structure organizations might want roles with more restricted permissions.

This section covers the following topics:

Permissions	278
-----------------------------------	-----

Default Roles	282
Viewing Roles	284
Creating a Role	285
Editing a Role	286
Deleting a Role	287

Permissions

Permissions specify the actions a user can perform. Fortify on Demand permissions are divided into two types: tenant level permissions and application level permissions.

- **Tenant Level Permissions** are permissions that are applied at the tenant level, such as managing users, exporting data, and downloading tools. For a detailed list of tenant level permissions, see "[Tenant Level Permissions](#)" below.
- **Application Level Permissions** are permissions that are applied to applications, such as creating applications, starting scans, editing issues, and managing reports. For a detailed list of Application Level Permissions, see "[Application Level Permissions](#)" on page 280.

Tenant Level Permissions

The following table lists the tenant level permissions that are available for a role. Any tenant level permission except Administration, which is tied to the Security Lead role, can be assigned to a custom role.

Category	Permissions	Actions Allowed
Administration	N/A (limited to Security Leads)	<ul style="list-style-type: none"> • Manage security policies • Manage attributes • Configure user security • Manage API keys • Configure SSO • View administration event log • Manage roles • Manage global audit templates • Download static scan payload for all applications
Application Access	<ul style="list-style-type: none"> • Manual - Applications are not assigned by default. Applications must be assigned to a user or group. <p>If Manual is selected, Manage Users,</p>	Determined by the application level permissions assigned to the role

Category	Permissions	Actions Allowed

Consume Entitlements	Deny, Allow	Consume entitlements when starting a scan

Default Roles

Fortify on Demand is configured with six default roles. Default roles can be edited or deleted with the exception of the Security Lead and Developer roles.

- **Security Lead**—Full access. The Security Lead has access to all applications and can perform all tasks, including creating applications and releases, working with data, auditing issues, and managing reports. The Security Lead is the only role that has the Administration permission, which includes the ability to manage roles, security policies, and other administrative settings.
- **Developer**—Limited access. The Developer has access to applications assigned to the user. The Developer can work with issue data and manage reports. The Developer is the default role for new users.
- **Lead Developer**—Medium-level access. The Lead Developer can create new applications, but only has access to applications assigned to the user. The Lead Developer can work with issue data, start scans, and manage reports.
- **Application Lead**—Medium-level access. The Application Lead has the same access as the Lead Developer, plus the ability to audit issues.
- **Executive**—Read-only access. The Executive has read-only access to applications assigned to the user.
- **Reviewer**—Read-only access. The Reviewer has read-only access to all applications.

The following table lists the permission set for each default role.

Permission	Security Lead	Developer	Lead Developer (Editable)	Application Lead (Editable)	Executive (Editable)	Reviewer (Editable)
Tenant Level Permissions						
Administration	X					
Application Access	All	Manual	Manual	Manual	Manual	All

Viewing Roles

To view the roles in your tenant:

1. Select the **Administration** view.
The User Management page appears.
2. Select the **Roles** tab.

The screenshot shows the 'User Management' interface with the 'Roles' tab selected. A search bar and a '+ ADD ROLE' button are visible. Below the search bar, it says '6 found' and 'Display: 25 50 100'. The table below lists the roles and their assigned users:

ROLE NAME	ASSIGNED USERS	APPLICATION ACCESS	
Application Lead	1	Manual	EDIT VIEW USERS DELETE
Developer	0	Manual	EDIT VIEW USERS DELETE
Executive	0	Manual	EDIT VIEW USERS DELETE
Lead Developer	0	Manual	EDIT VIEW USERS DELETE
Reviewer	0	All	EDIT VIEW USERS DELETE
Security Lead	2	All	EDIT VIEW USERS DELETE

The following table describes how to navigate the **Roles** tab.

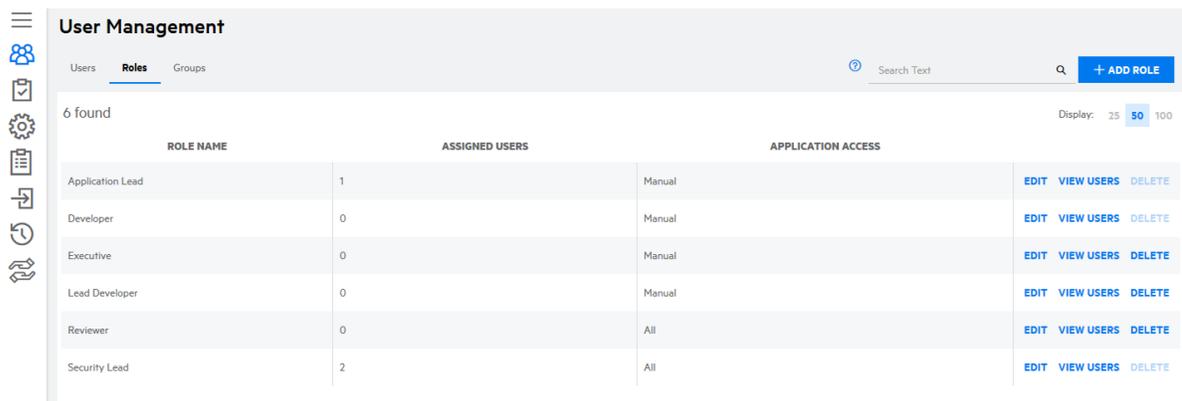

Task	Action
Search the role list	Type a keyword or phrase in the search field and press Enter . To remove the search results, remove the text from the search field and press Enter .
Create a role	Click Add Role . For more information, see " Creating a Role " on the next page.
View users assigned to a role	Click View Users in the action column.

Task	Action
Edit a role	Click Edit in the action column. For more information, see "Editing a Role" on the next page.
Delete a role	Click Delete in the action column. For more information, see "Deleting a Role" on page 287.

Creating a Role

To create a role:

1. Select the **Administration** view.
The **User Management** page appears.
2. Select the **Roles** tab.

The screenshot shows the 'User Management' interface with the 'Roles' tab selected. A table lists six roles with their assigned users and application access. The table has columns for Role Name, Assigned Users, and Application Access. Each row includes 'EDIT', 'VIEW USERS', and 'DELETE' action links.

ROLE NAME	ASSIGNED USERS	APPLICATION ACCESS	
Application Lead	1	Manual	EDIT VIEW USERS DELETE
Developer	0	Manual	EDIT VIEW USERS DELETE
Executive	0	Manual	EDIT VIEW USERS DELETE
Lead Developer	0	Manual	EDIT VIEW USERS DELETE
Reviewer	0	All	EDIT VIEW USERS DELETE
Security Lead	2	All	EDIT VIEW USERS DELETE

3. Click **+ Add Role**.
The Add/Edit Role window appears.

3. Click **Delete** in the row of the role that you want to delete.

A confirmation message appears.

4. Click **Yes**.

The role is deleted.

Users

Users with the Manage Users permissions can manage users and groups.

This section covers the following topics:

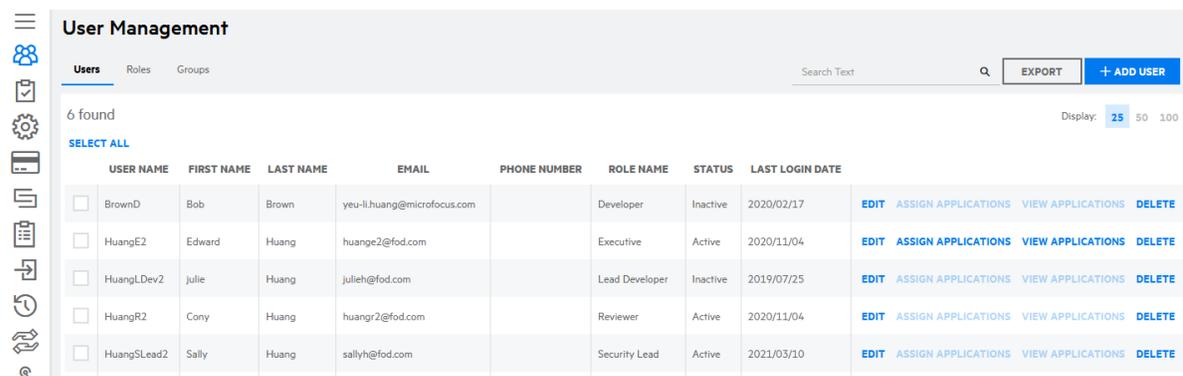

Viewing Users	288
Creating a User	289
Editing a User Account	291
Managing Application Assignment to a User	292
Deleting a User Account	294

Viewing Users

To view the users in your tenant:

1. Select the **Administration** view.

The **Users** tab of the User Management page appears.

The following table describes how to navigate the **Users** tab.

Task	Action
Search the user list	Type a word or phrase in the search field and press Enter . To remove the search results, remove the text from the search field and press Enter .
Export the user list.	Click Export . A CSV file containing details of all users is saved locally to a folder specified in your browser settings.

Task	Action
Add a user	Click Add User . For more information, see " Creating a User " below.
Assign and unassign applications	Click Assign Applications in the action column. For more information, see " Managing Application Assignment to a User " on page 292.
View applications assigned to a user	Click View Applications in the action column.
Edit a user	Click Edit in the action column. For more information, see " Editing a User Account " on page 291.
Delete a user	Click Delete in the action column. For more information, see " Deleting a User Account " on page 294.

Creating a User

To create a user:

1. Select the **Administration** view.

The **Users** tab of the User Management page appears.

The screenshot shows the 'User Management' page with the 'Users' tab selected. The page includes a search bar, 'EXPORT' and '+ ADD USER' buttons, and a table of users. The table has columns for USER NAME, FIRST NAME, LAST NAME, EMAIL, PHONE NUMBER, ROLE NAME, STATUS, and LAST LOGIN DATE. There are also action buttons for each user: EDIT, ASSIGN APPLICATIONS, VIEW APPLICATIONS, and DELETE.

USER NAME	FIRST NAME	LAST NAME	EMAIL	PHONE NUMBER	ROLE NAME	STATUS	LAST LOGIN DATE	
BrownD	Bob	Brown	yeu-li.huang@microfocus.com		Developer	Inactive	2020/02/17	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangE2	Edward	Huang	huang2@fod.com		Executive	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangLDev2	julie	Huang	julieh@fod.com		Lead Developer	Inactive	2019/07/25	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangR2	Cony	Huang	huangr2@fod.com		Reviewer	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangSLead2	Sally	Huang	sallyh@fod.com		Security Lead	Active	2021/03/10	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE

2. Click **+ Add User**.

The Add/Edit User window appears.

3. Complete the fields as needed. Fields are required unless otherwise noted.

Field	Description
User Name	Type a unique username. The username cannot be changed after the user is created.
Email	Type the user's email address.
First Name	Type the user's first name.
Last Name	Type the user's last name.
Phone Number	(Optional) Type the user's phone number. Hyphens and other separators are not accepted.
Role	Select the user role (default role is Developer). For more information on user roles, see Roles and Permissions .
Inactive	(Optional) Select the check box to mark the user as inactive. The user will be unable to log in to Fortify on Demand.

4. (Optional) Select the groups to which the user will be assigned. You can use the search box to filter the group list.
5. Click **Save**.

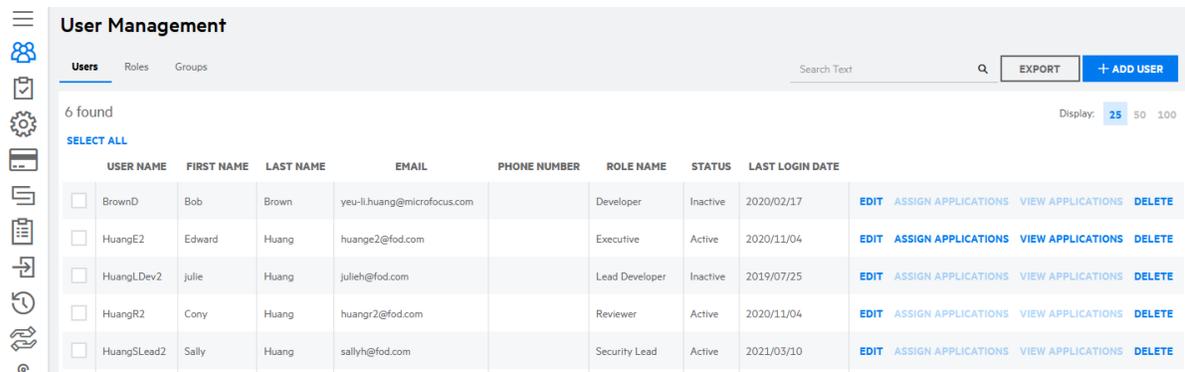

The new user appears in the user list.

Editing a User Account

You can edit an existing user account, including resetting the user's password.

1. Select the **Administration** view.

The **Users** tab of the User Management page appears.

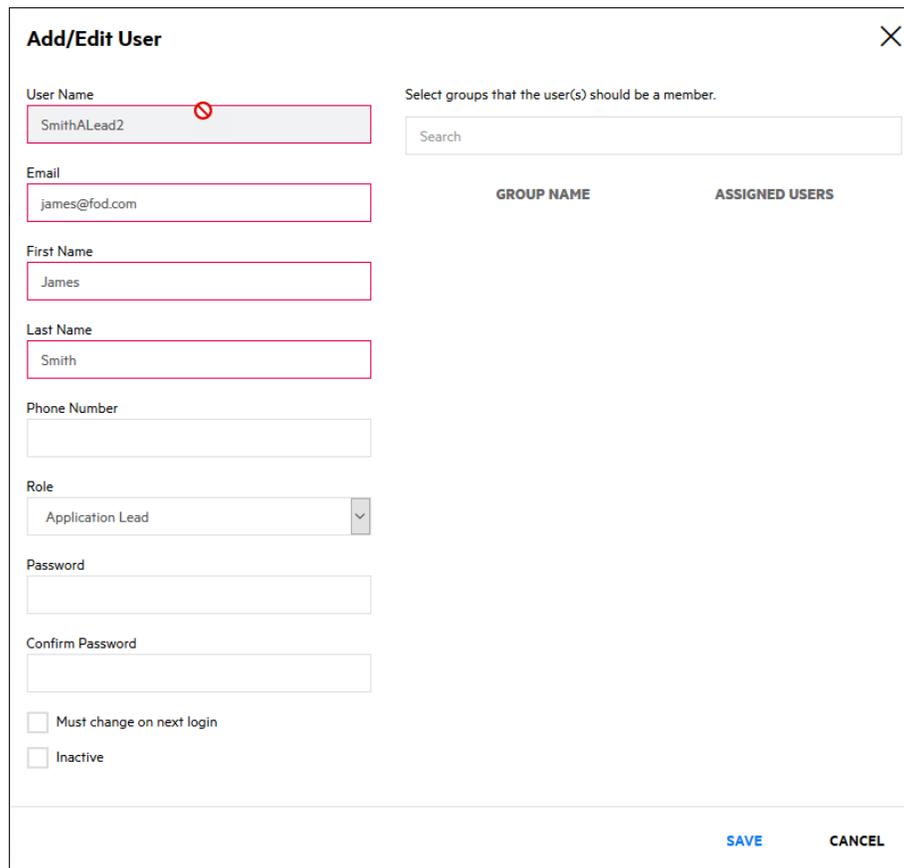

The screenshot shows the 'User Management' page with the 'Users' tab selected. A table lists six users with columns for User Name, First Name, Last Name, Email, Phone Number, Role Name, Status, and Last Login Date. Each row includes action links for Edit, Assign Applications, View Applications, and Delete.

USER NAME	FIRST NAME	LAST NAME	EMAIL	PHONE NUMBER	ROLE NAME	STATUS	LAST LOGIN DATE	
BrownD	Bob	Brown	yeu-li.huang@microfocus.com		Developer	Inactive	2020/02/17	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangE2	Edward	Huang	huange2@fod.com		Executive	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangLDev2	julie	Huang	julieh@fod.com		Lead Developer	Inactive	2019/07/25	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangR2	Cony	Huang	huangr2@fod.com		Reviewer	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
HuangSLead2	Sally	Huang	sallyh@fod.com		Security Lead	Active	2021/03/10	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE

2. Click **Edit** in the row of the user whom you want to edit.

The Add/Edit User window opens.

The 'Add/Edit User' form contains the following fields and options:

- User Name: SmithALead2
- Email: james@fod.com
- First Name: James
- Last Name: Smith
- Phone Number: (empty)
- Role: Application Lead (dropdown)
- Password: (empty)
- Confirm Password: (empty)
- Must change on next login:
- Inactive:

On the right side, there is a section for group selection:

- Search: (input field)
- GROUP NAME
- ASSIGNED USERS

Buttons at the bottom: SAVE, CANCEL

3. Edit the fields as needed. The following fields are used for resetting a user's password.

4.

Field	Description
Password	Type a new password for the user. The password needs to meet complexity requirements.
Confirm Password	Retype the same password.
Must change on next login	Select the check box to require the user to change the password the next time the user logs in.

5. Click **Save**.
The user changes are saved.

Managing Application Assignment to a User

Users with the **Manage Users** permission can manage application access to a user from the Administration view.

To manage application access to a user:

1. Select the **Administration** view.

The **User** tab of the User Management page appears.

The screenshot shows the 'User Management' page with the 'Users' tab selected. A search bar and 'EXPORT' and '+ ADD USER' buttons are at the top right. Below the search bar, it says '6 found' and 'Display: 25 50 100'. A 'SELECT ALL' link is on the left. The table has the following data:

	USER NAME	FIRST NAME	LAST NAME	EMAIL	PHONE NUMBER	ROLE NAME	STATUS	LAST LOGIN DATE	
<input type="checkbox"/>	BrownD	Bob	Brown	yeu-li.huang@microfocus.com		Developer	Inactive	2020/02/17	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangE2	Edward	Huang	huange2@fod.com		Executive	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangLDev2	julie	Huang	julieh@fod.com		Lead Developer	Inactive	2019/07/25	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangR2	Cony	Huang	huangr2@fod.com		Reviewer	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangSLead2	Sally	Huang	sallyh@fod.com		Security Lead	Active	2021/03/10	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE

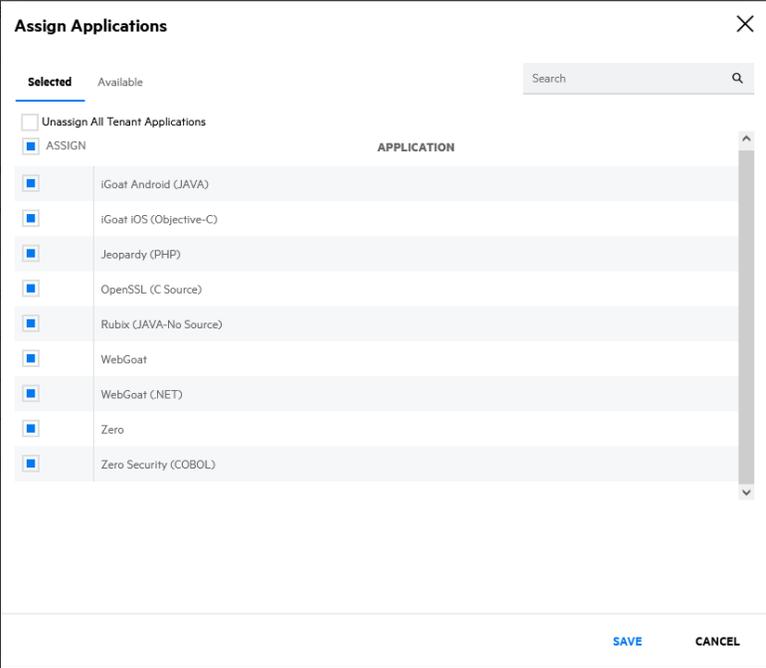

2. Click **Assign Applications** in the row of the user for whom you want to edit application access.
The Assign Application window appears.

Note: The link is unavailable if a user is assigned to a role with the **All Application Access** permission.

3. You can perform the following tasks:

Task	Procedure
Assign applications to user	a. Select the Available tab.

Task	Procedure
	<div data-bbox="643 310 1409 982"></div> <p data-bbox="599 1010 1373 1331">b. 2. Click **Delete** in the row of the user whom you want to delete.

A confirmation message appears.

3. Click **Yes**.

The user is deleted.

Note: When a user is deleted, occurrences of the user name, full name, email, and phone number are removed except when necessary for referential integrity and replaced with an unique user ID.

Groups

Users can be sorted into groups to which applications can be assigned. This allow streamlining of application assignment. Groups can be designed around business groups, regions, or other organizational structure.

This section covers the following topics:

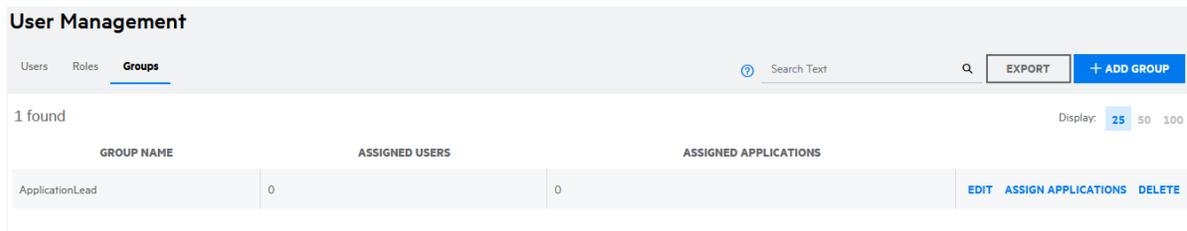

Viewing Groups	295
Creating a Group	296
Editing a Group	297
Managing Application Assignment for a Group	299
Deleting a Group	301

Viewing Groups

To view the groups in your tenant:

1. Select the **Administration** view.
The User Management page appears.

2. Select the **Groups** tab.

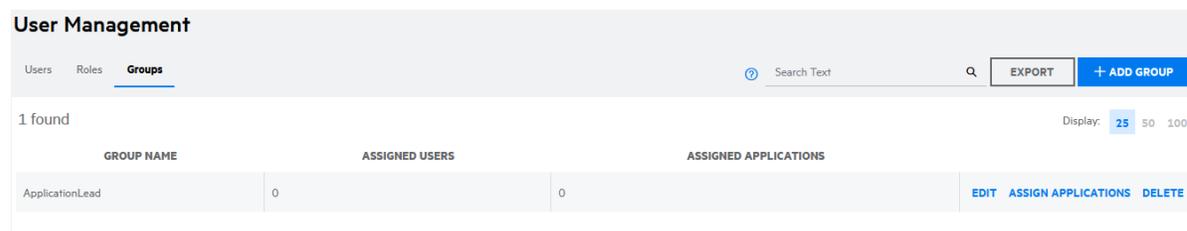

The following table describes how to navigate the **Groups** tab.

Task	Action
Search the group list	Type a keyword or phrase in the search field and press Enter . To remove the search results, remove the text from the search field and press Enter .
Export data as a .csv file	Click Export . A .csv file containing user group details is saved locally to a folder specified in your browser settings.
Add a group	Click Add Group . For more information, see "Creating a Group" below .
Edit a group name and assigned users	Click Edit in the action column. For more information, see "Editing a Group" on the next page .
Assign and unassign applications	Click Assign Applications in the action column. For more information, see "Managing Application Assignment for a Group" on page 299 .
Delete a group	Click Delete in the action column. For more information, see "Deleting a Group" on page 301 .

Creating a Group

To create a group

1. Select the **Administration** view.
The User Management page appears.
2. Select the **Groups** tab.

3. Click **+Add Group**.

The Add/Edit Group window appears.

Click Save.</p>

5. Click **Save**.
The changes to the group's assigned applications are saved.

Deleting a Group

To delete a group:

1. Select the **Administration** view.
The **User Management** page appears.
2. Select the **Groups** tab.

3. Click **Delete** in the row of the group that you want to delete.
A confirmation message appears.
4. Click **Yes**.
The group is deleted.

Policy Management

Security Leads can configure how security policies are applied to applications in a tenant. They can also create and manage custom security policies.

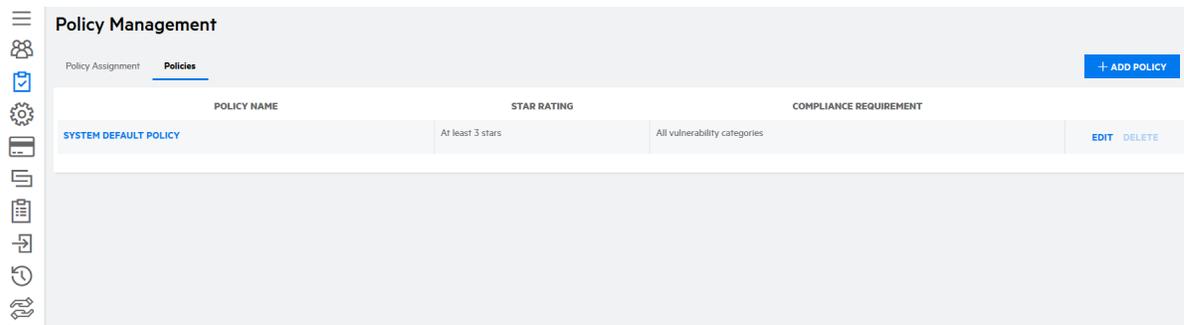

This section covers the following topics:

Creating a Security Policy	301
Setting the Security Policy	307
Deleting a Security Policy	308

Creating a Security Policy

To create a custom security policy:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Policy Management**.
The **Scope** tab of the Policy Management page appears.
3. Select the **Policies** tab.

4. Click **+Add Policy**.

The **Add/Edit Policy** wizard appears.

The screenshot shows the 'Add/Edit Policy' wizard. It has a sidebar on the left with 'Policy Details' selected. The main form area contains the following fields:

- Policy Name:** A text input field containing 'New Policy'.
- Star Rating:** A dropdown menu with 'At least 3 stars' selected.
- Application Monitoring:** A dropdown menu with 'Not required' selected.
- Compliance Requirement:** A dropdown menu with 'All vulnerability categories' selected.

 At the bottom of the form, there are three buttons: 'BACK', 'NEXT', and 'SAVE'. A mouse cursor is hovering over the 'NEXT' button.

5. On the Policy Details page, complete the following fields:

Field	Description
Policy Name	Type a name for the policy.
Star Rating	Select the minimum star rating an application must be awarded to be determined as passing.
Application Monitoring	Select whether Application Monitoring is required or not. If it is required, then a production release will fail if Application Monitoring is not enabled for the application.
Compliance Requirement	Select which vulnerabilities are included when determining the pass/ fail status of an application. You can retain the default value of all vulnerabilities or only include issues tagged with a specific compliance requirement, such as OWASP 2021 or PCI 3.2.

Note: The pass/fail status incorporates Application Monitoring and open source issues.

6. Click **Next**.
7. On the Assessment Types page, select which assessment types are available to applications that have the policy applied.

The screenshot shows the 'Add/Edit Policy' dialog box. On the left, there is a sidebar with navigation options: 'Policy Details' (checked), 'Assessment Types', 'Development Releases', 'QA/Test Releases', 'Production Releases', and 'Summary'. The main area is titled 'Allowed Assessment Types' and features a checkbox labeled 'Allow All Assessment Types' which is currently checked. Below this, there are two sections: 'Static' and 'Dynamic'. Each section contains a list of assessment types with checkboxes. The 'Static' section includes: Static Analysis - Single Scan, Static Analysis - Subscription, Static Assessment - Single Scan, Static Assessment - Subscription, Static Basic - Single Scan, Static Basic - Subscription, Static+ Assessment - Single Scan, and Static+ Assessment - Subscription. The 'Dynamic' section includes: Dynamic Basic - Single Scan, Dynamic Basic - Subscription, and Dynamic Express - Single Scan. At the bottom of the dialog, there are three buttons: 'BACK', 'NEXT', and 'SAVE'.

- **Allow All Assessment Types** is selected by default. Leave it selected to have the security policy allow all assessment types, including ones added after the policy has been created.
- Deselect **Allow All Assessment Types** to individually select assessment types.

Note: If an application undergoes a policy update and has an active subscription or available remediation for an assessment type that is not allowed by the current policy, the subscription or remediation will still be available until it expires or is used.

8. Click **Next**.
9. On the Development Releases page, complete the fields that apply to Development status releases:

Field	Description
Remediation Grace Period (0 - 365 Days)	<p>Specify the issue remediation grace period for each issue severity level. When an issue found in a Development release is within its grace period, it will not affect the pass/ fail status of the release.</p> <p>Note: The star rating specified above determines the issue severity levels displayed.</p>
Required Scan Frequency (0 - 365 Days)	<p>Specify the required scan frequency of each scan type. If a Development release has not completed a scan within the designated period of the scan type, it will fail. The value of 0 means no scan is required.</p>

10. Click **Next**.
11. On the QA/Test Releases page, complete the fields that apply to QA/Test status releases:

16. Click **Save**.

The new policy appears in the **Policies** tab.

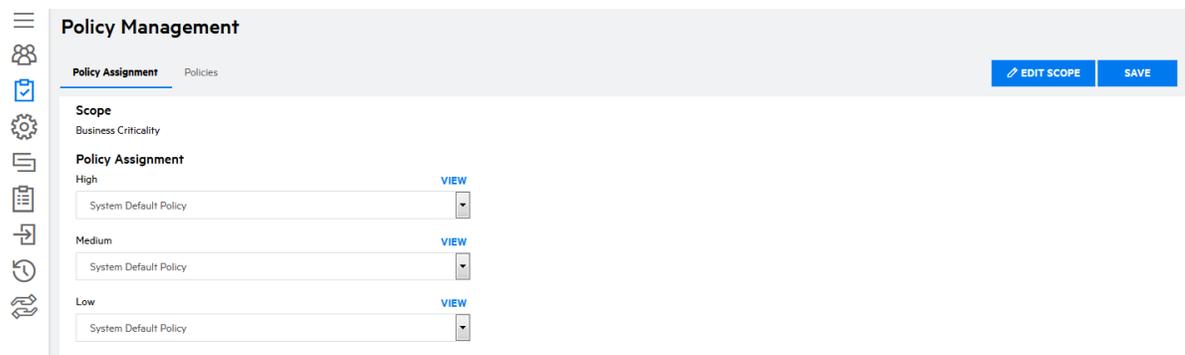

Related Topics:

- For information on Star Ratings, see ["Five-Star Assessment Rating" on page 20](#).
- For information on manually overriding the Pass/Fail settings, see ["Overriding the Security Policy of a Release" on page 66](#).

Setting the Security Policy

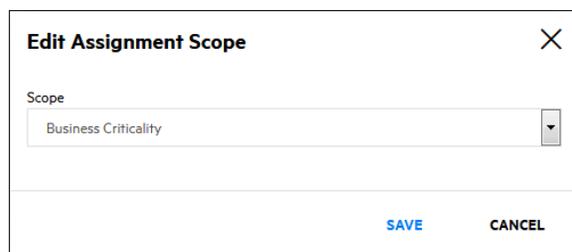

To set the security policy for your tenant:

1. Select the **Administration** view.
The **User Management** page appears.
2. Click **Policy Management**.
The **Policy Assignment** tab of the **Policy Management** page appears.

3. Click **Edit**.

The **Edit Assignment Scope** modal window opens.

4. Select the scope for determining how policies are applied from the **Scope** list. Only one scope can be applied per tenant. The available values are:
 - **Business Criticality**: groups applications according to their assigned Business Criticality level. For more information on Business Criticality levels, see ["Creating an Application" on page 41](#).
 - **Application Type**: groups applications as web / thick-client or mobile.
 - **Application Attribute**: groups applications based on the values of the application attribute that you select from the **Attribute** list. This value is invalid if no application attributes have been created in the tenant.

Note: The selection is limited to picklist type attributes that have ten or less values.

5. Click **Save**.

You are returned to the **Scope** tab.

6. Select the policy that will be assigned to each value of the selected scope.

7. Click **Save**.

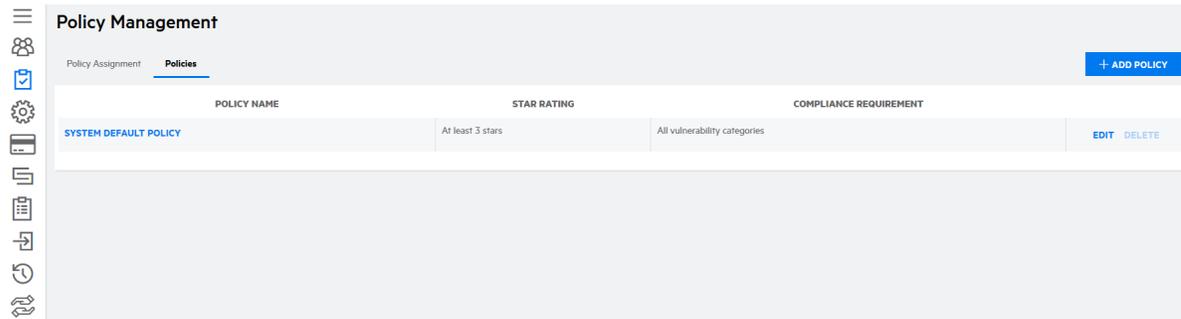

Your security policy settings are saved.

Deleting a Security Policy

You can delete a custom security policy that is currently not in use. The Fortify on Demand default policy can be edited but not be deleted.

To delete a custom security policy:

1. Select the **Administration** view.
The **User Management** page appears.
2. Click **Policy Management**.
The **Scope** tab of the **Policy Management** page appears.
3. Select the **Policies** tab.

4. Click **Delete** in the row of the policy you want to delete.
A confirmation message appears.
5. Click **Yes**.
The policy is deleted.

Single Sign-On (SSO)

Single Sign-On (SSO) eliminates the need to maintain separate credentials for Fortify on Demand and helps administrators seamlessly manage user access and provisioning. Fortify on Demand supports SSO integration with existing identity providers through the SAML 2.0 standard for federated identity.

Fortify on Demand supports the following SAML 2.0 bindings:

- POST and Redirect bindings for SAML authentication requests from Fortify on Demand to the identity provider
- POST binding for SAML assertion responses from the identity provider to Fortify on Demand

Security Leads can configure SSO for the tenant. SSO configuration consists of the following tasks:

- Configuring SSO in Fortify on Demand. For instructions, see ["Configuring SSO in Fortify on Demand" on the next page](#).
- Adding the identity provider metadata to Fortify on Demand. For instructions, see ["Adding the Identity Provider Metadata" on page 313](#).
- Downloading the Fortify on Demand metadata. For instructions, see ["Downloading the Fortify on Demand Metadata" on page 315](#)
- Configuring SSO in your identity provider. For instructions, see ["Configuring SSO in the Identity Provider" on page 315](#).

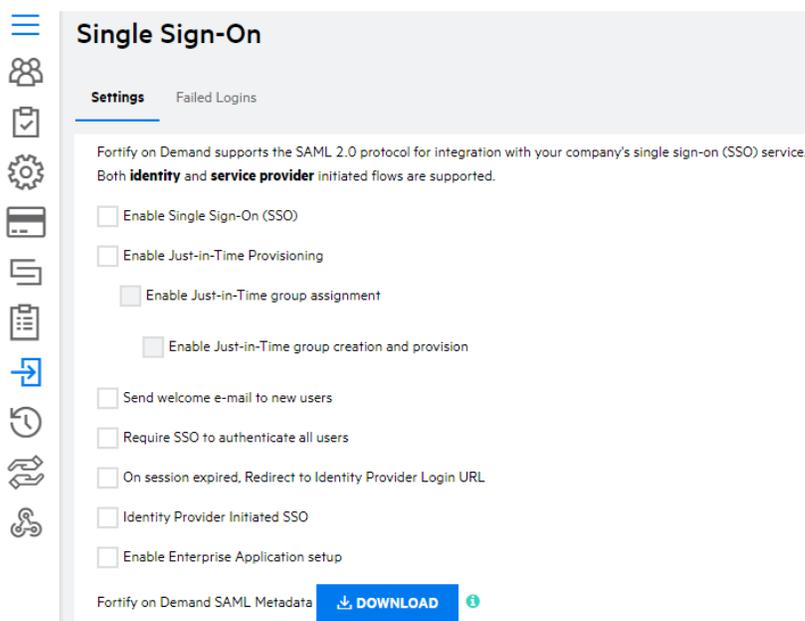

Configuring SSO in Fortify on Demand

Configure the Fortify on Demand SSO settings and map the Fortify on Demand attribute names to the identity provider attribute names.

To configure the Fortify on Demand SSO settings:

1. Select the **Administration** view.
The User Management page appears.

2. Click **Single Sign-On**.
The Single Sign-On page appears.

3. Select the desired check boxes:

Field	Description
Enable Single Sign-on (SSO)	This option enables SSO.
Enable Just-in-Time Provisioning	This option allows the automatic creation or update of Fortify on Demand user accounts for users who authenticate through your identify provider.
Enable Just in Time group assignment	Enable Just-in-Time Provisioning must be selected. This option allows the automatic update of Fortify on Demand user group assignments through your identity provider.

Field	Description
Enable Just in Time group creation and provision	<p>Enable Just-in-Time Provisioning and Enable Just in Time group assignment must be selected. This option allows the automatic creation of Fortify on Demand user groups through your identity provider.</p>
Send welcome e-mail to new users	<p>New users who are created through the portal will receive a welcome email. However, the welcome email includes password setup instructions that do not apply to users who authenticate through SSO. If this option is not selected, welcome emails are not sent to any new users .</p>
Require SSO to Authenticate All Users	<p>This option requires all users to use SSO. If this option is not selected, users may log in to Fortify on Demand using SSO authentication or username and password on the standard login page.</p> <p>Note: Enabling this option prevents the use of some specialized clients and integrations that use the Fortify on Demand Web API because the Web API has limited support for SAML authentication tokens. For example, the iOS client requires non-SSO credentials to connect to Fortify on Demand. The recommended approach in this case is to generate a strong, random password (minimum 32 characters) that can be used as a “personal access token” for non-SSO authentication.</p>
On session expired, Redirect to Identity Provider Login URL	<p>This option has users redirected to their identity provider login page after the session expires or when the user logs out. This feature requires cookies to be enabled in the browser and a user login session within the last 30 days.</p>
Identity Provider Initiated SSO	<p>Fortify on Demand recommends the service provider-initiated SAML authentication flow, but supports both service provider-initiated and identity provider-initiated flows. If this option is not selected, users log in to Fortify on Demand using the SSO Login URL provided on this page. Fortify on Demand then makes a service provider-initiated request to the identity provider to authenticate the user. If this option is selected, the identity provider-initiated flow is used. Users log in by connecting directly to the identity provider and are redirected to Fortify on Demand after successful authentication.</p>

Field	Description
Enable Enterprise Application setup	<p>If your organization has multiple tenants, this option enables authentication through a single identity provider.</p> <p>Note: If you select this option and have an existing SSO configuration, you will need to download the updated Fortify on Demand metadata and import it into the identity provider, and reimport the identity provider metadata into Fortify on Demand. Alternatively, you can append <code>?t=<ssologinurlguid></code> to both the Identity Provider Name in the Fortify on Demand SSO settings and the service provider name in the identity provider settings, where <code><ssologinurlguid></code> is a unique identifier found in the SSO Login URL.</p>

- In the **Attributes** section, map the attribute names expected by Fortify on Demand to those configured in the identify provider. Each attribute name defined here must match the exact **Name** value of the attribute used by the identity provider, and is often defined as a full schema URL. Some identity providers also send a shorter **FriendlyName** value for the attribute, which can also be used in the attribute mapping. For descriptions of each attribute, see ["Configuring SSO in the Identity Provider" on page 315](#).

Attributes ⓘ

Attribute	Name
User Name	<input type="text"/>
First Name	<input type="text"/>
Last Name	<input type="text"/>
Email	<input type="text"/>
Mobile Number	<input type="text"/>
Groups	<input type="text"/>
Role	<input type="text"/>

Enable Custom Security Lead Mapping

Custom Mapping

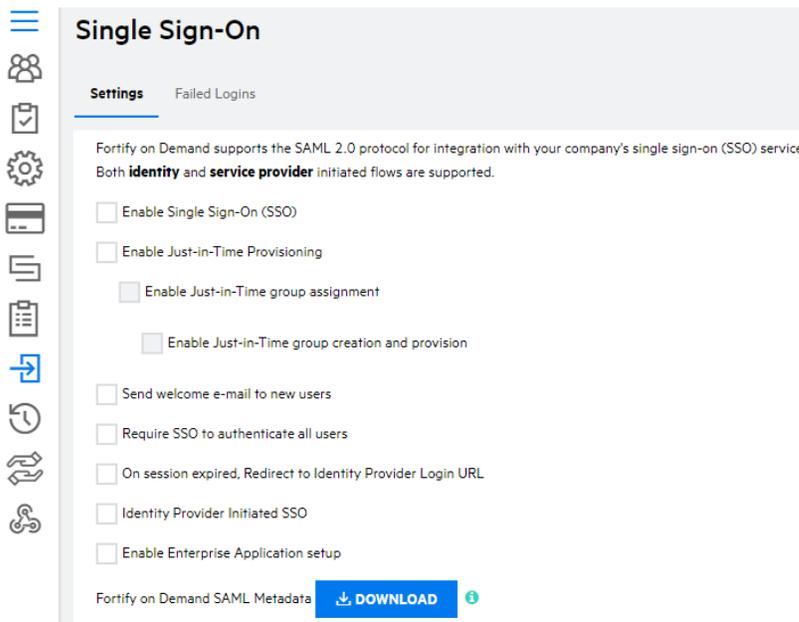

- Select **Enable Custom Security Lead Mapping** to map a custom value (instead of the default "Security Lead" value) to the Security Lead role in SAML assertion. Type that value in the **Custom Mapping** field. Note that this invalidates the default "Security Lead" value used for the mapping.
- Click **Save**.
Your SSO settings are saved.

Adding the Identity Provider Metadata

Add the identity provider metadata by importing it into Fortify on Demand or manually configuring it.

To add the identity provider metadata:

1. Select the **Administration** view.
The **User Management** page appears.
2. Click **Single Sign-On**.
The Single Sign-On page appears.

3. In the **Configure Identity Provider** section, select the method of adding the identity provider metadata:
 - **Import Identity Provider Metadata**
 - **Edit Manually**

Configure Identity Provider

Import Identity Provider Metadata

Edit Manually

Identity Provider Name

Identity Provider Login URL

Authentication Request Binding

HTTP_POST

Limit to Values Supported by Identity Provider

SAML Request Signing Algorithm

SHA-1 SHA-256

Identity Provider Certificate

SSO Login URL

4. Follow the instructions for the method that you selected.
 - Import the identity provider metadata:
 - i. Click the browse button.
 - ii. Navigate to and select the .xml file.
 - iii. Click **Import**.
 - Manually configure the identity provider metadata:
 - i. Complete the fields with the information of your identity provider:
 - **Identity Provider Name**
 - **Identity Provider Login URL**
 - **Authentication Request Binding** (select **Limit to Values Supported by Identity Provider** to use the bindings supported by the identity provider)
 - **SAML Request Signing Algorithm**
 - **Identity Provider Certificate**

Note: Once SSO is configured, users will need to use the link in the **SSO Login URL** box to log in to Fortify on Demand.

5. Click **Save**.

The identity provider metadata is added to Fortify on Demand.

Downloading the Fortify on Demand Metadata

Download the Fortify on Demand metadata file to help configure your identity provider to respond to authentication requests from Fortify on Demand. The Fortify on Demand metadata file includes the Assertion Consumer Service URLs, the Fortify on Demand certificate, and the entity ID (also known as the service provider name).

To download the Fortify on Demand metadata file:

1. Select the **Administration** view.

The User Management page appears.

2. Click **Single Sign-On**.

The Single Sign-On page appears.

3. Click **Download**.

The Fortify on Demand metadata file is saved to a local folder specified in your browser settings.

Note: The metadata is also available as a URL to support configuration in identity providers that support automatic metadata retrieval. The metadata is accessed using the absolute path “/SAML” on the portal site (for example, "https://ams.fortify.com/SAML"). The metadata URL does not require authentication, so it can be accessed by the identity provider without supplying Fortify on Demand credentials.

Configuring SSO in the Identity Provider

Fortify on Demand supports any identity provider that conforms to the SAML 2.0 specifications for browser-based authentication flows. Use the following instructions as a guideline for configuring your identity provider for use with Fortify on Demand.

Most required information about the Fortify on Demand service provider can be obtained from the SAML metadata, and many identity providers allows importing the metadata rather than configuring all the settings manually.

To configure SSO in the identity provider:

1. Accept authentication requests from Fortify on Demand.

The identity provider must accept authentication requests sent from the Fortify on Demand service provider name. The service provider name is "https://<tenant_host>/SAML," where the <tenant_host> is your Fortify on Demand datacenter (for example, "https://ams.fortify.com/SAML"). You can obtain the service provider name from the Fortify on Demand SAML metadata.

Fortify on Demand signs all authentication requests, so you may also choose to validate the signature against the SAML certificate provided in the Fortify on Demand SAML metadata.

Note: Prior to version 5.2, Fortify on Demand used a service provider name that was incompatible with some identity providers. If you set up SSO authentication prior to version 5.2, you can keep the "urn:fortify:FodServiceProvider" service provider name for backward compatibility with the existing identity provider configuration. You are encouraged to migrate to the new service provider name at the earliest convenience.

2. Sign all SAML assertions.

All SAML assertions sent to Fortify on Demand must be signed using the identity provider certificate specified in the Fortify on Demand SSO settings. Fortify on Demand accepts signatures on either the entire SAML response or just the assertion contained in the response.

Note: Fortify on Demand does not support encrypted assertions.

3. Make sure the identity provider's system clock is set properly, preferably from a central time source service such as NIST.

Most SAML assertions contain a valid time period specified by the identity provider. Fortify on Demand checks the time period against its system clock when the assertion is received. Fortify on Demand allows a maximum of 3 minutes clock skew to account for differences in the clock settings. If the assertion is received more than 3 minutes after the expiration time specified in the assertion, then the assertion is rejected.

4. Set the URL where the identity provider will send the SAML assertion response after a user is authenticated

The URL is known as the Assertion Consumer Service URL. It might have a different term, such as "Reply URL," depending on the identity provider. You can obtain the URL from the Fortify on Demand SAML metadata.

5. Define the identity claim attributes to include in the SAML assertion.

Fortify on Demand uses the claim attributes in the SAML assertion to get information about the authenticated user.

Every assertion must contain a User Name attribute, which identifies the user to Fortify on Demand. The value must be unique across Fortify on Demand, so you should use an identifier that is unique to your organization, such as an email address.

Note: Some systems use the **NameID** value in the Subject element of the SAML assertion to pass the user identifier. Fortify on Demand does not support use of **NameID**, so you must also map an attribute for User Name.

The following attributes are used for Just-In-Time (JIT) Provisioning. Attributes are required when creating a new Fortify on Demand user. When updating an existing Fortify on Demand user, all attributes are optional and existing values are retained for unspecified attributes.

Attribute	Required	Description
Email	Yes	Email address of the user. The value can be the same as the User Name value, but is not required. You can map both User Name and Email to the same attribute in the Fortify on Demand SSO settings.
First Name	Yes	First name of the user.
Last Name	Yes	Last name of the user.
Mobile Number	No	Mobile phone number of the user.
Role	No	User role. The value must be a plain text string that matches a role name (case-insensitive) in Fortify on Demand. If a value is not provided, the Developer role is set for a new user. If the value does not match a role name, an error is returned.
Group	No	User group. The value must be a plain text string (maximum 50 characters and case-insensitive). If the value does not match an existing user group in Fortify on Demand, the user group will be created if the portal SSO option Enable Just-in-Time group creation and provision is selected. Note: If a user logs in using SSO and the Groups attribute is empty in the SAML assertion, any existing user group assignments will be removed.
provision_user	Yes	Specifies whether or not a user is automatically created in Fortify on Demand if not found. If the value is set to TRUE, then a new user is created. If the value is set to FALSE or not provided, then a user is not created and the login request will fail if the user does not already exist in Fortify on Demand. Note: If a value is not provided and JIT Provisioning is enabled in the portal, provision_user defaults to TRUE.
update_user	No	Specifies whether or not an existing user's details in Fortify on

Attribute	Required	Description
		<p>Demand are automatically updated from the attribute values in the SAML assertion. If the value is set to TRUE, then user details are automatically updated. If the value is set to FALSE, then user details are not updated.</p> <p>If a value is not provided, the value of the <code>provision_user</code> attribute is used. You can specify both to control creating and updating separately. For example, you might want to manually create users in the portal, but have user details updated from the assertion values.</p>
mtt	No	<p>If the portal SSO option Enable Enterprise Application setup is selected, this attribute is required.</p> <p>Unique identifier found in the SSO Login URL, enclosed in quotation marks. For example, given the URL <code>https://ams.fortify.com/SSO/Login/c7f4cde3-891b-49ea-b7ae-f03de4f8a8dc</code>, the identifier is <code>c7f4cde3-891b-49ea-b7ae-f03de4f8a8dc</code>.</p>

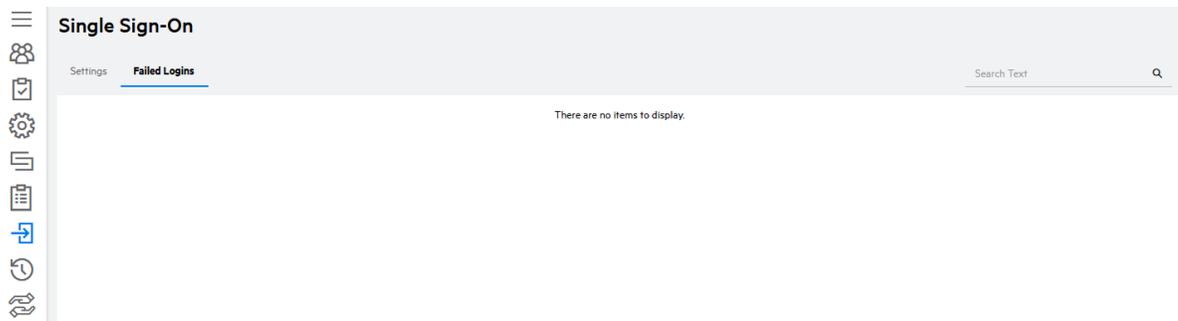

Note: You must configure Fortify on Demand to recognize the attributes used by the identity provider. See "[Configuring SSO in Fortify on Demand](#)" on page 310.

Troubleshooting Failed Logins

Troubleshooting a failed SSO authentication request can be a difficult task because the actual values passed in the SAML assertion are hidden from the user. To assist with troubleshooting efforts, the portal provides a log of failed SAML assertions. Failed assertions are deleted after 30 days.

To view a log of failed SAML Assertions:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Single Sign-On**.
The Single Sign-On page appears.
3. Select the **Failed Logins** tab.
The failed SAML assertion log appears.

The grid contains the following columns:

- Received Time - The time that the SAML assertion was received.
 - IP Address – The IP address of that client that requested authentication.
 - Username – The username that was specified in the assertion, if one was found.
 - Reason – A brief description of the reason why the SAML assertion was rejected.
4. Click the **Raw Assertion** link for any failed login to open an XML view of the decoded SAML assertion.

The page displays the details of the assertion, including the time that the assertion was issued by the identity provider, the attributes and values that were provided, the valid time period and audience, and the certificate used to sign the assertion.

Vendor Management

If you would like to share your assessment results with a vendor your company does business with, or with another division of your company, you can do so through the portal, as long as each entity has its own tenant with Fortify on Demand. Relationships between tenants must be initiated by one tenant and confirmed by the other; no one can establish a connection to your tenant without your permission.

Also, each link goes in only one direction. That is, if you would like to share your reports, you must initiate a link to another tenant. If that tenant would like to share its reports with you, it must *also* initiate a link. The **Vendor Report** link is only visible after the sharing relationship is successful, and reports are shared.

Note: You are only sharing your assessment results, your code is not being shared.

This section covers the following topics:

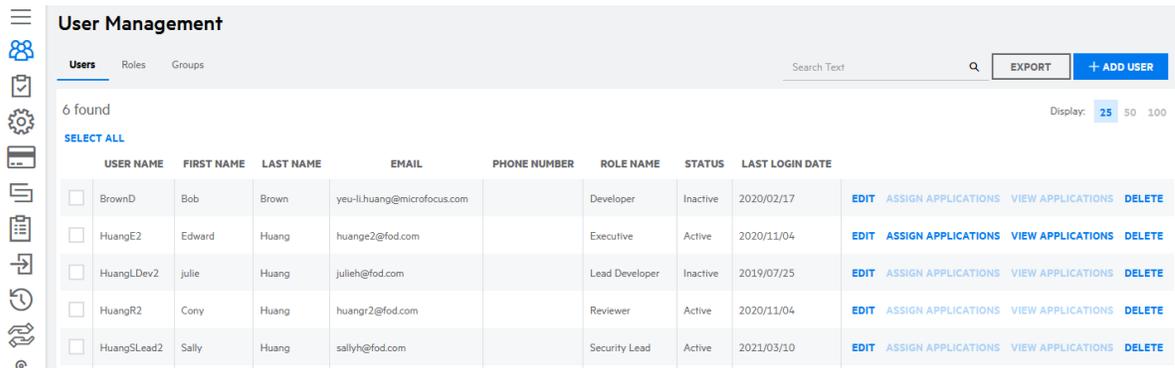

- [Initiating a Relationship with Another Tenant](#)
- [Accepting a Relationship Initiated by Another Tenant](#)
- [Publishing a Vendor Management Report](#)
- [Viewing Published Report](#)

Initiating a Relationship with Another Tenant

To establish your tenant as a “Vendor” (that is, one that can send reports to other tenants):

1. Select the **Administration** view.

The **User Management** page appears.

The screenshot shows the 'User Management' interface. It includes a sidebar with navigation icons, a search bar, and a table of users. The table has columns for User Name, First Name, Last Name, Email, Phone Number, Role Name, Status, and Last Login Date. Each row has a checkbox and a set of action links: EDIT, ASSIGN APPLICATIONS, VIEW APPLICATIONS, and DELETE.

	USER NAME	FIRST NAME	LAST NAME	EMAIL	PHONE NUMBER	ROLE NAME	STATUS	LAST LOGIN DATE	
<input type="checkbox"/>	BrownD	Bob	Brown	yeu-li.huang@microfocus.com		Developer	Inactive	2020/02/17	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangE2	Edward	Huang	huange2@fod.com		Executive	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangLDev2	Julie	Huang	julieh@fod.com		Lead Developer	Inactive	2019/07/25	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangR2	Cony	Huang	huangr2@fod.com		Reviewer	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangSLead2	Sally	Huang	sallyh@fod.com		Security Lead	Active	2021/03/10	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE

2. Click **Vendors**.
3. Select the **Customers** tab.

Note: "My Vendors" means tenants you can receive reports from, and “Customers” means tenants you can send reports to.

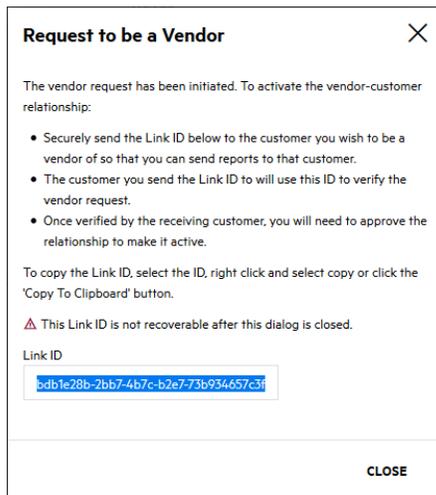

4. Click **Request to be a Vendor**.

Use the optional **Notes** box to add information about the vendor-customer relationship.

The dialog box titled 'Request to be a Vendor' contains the following text: 'Before you can send an analysis report to a customer, you must request to be a vendor of that customer. To initiate this request click "Generate." This will create a Link ID which you will send to the receiving customer.' Below this is a 'Notes' section with a text area. At the bottom, there is a 'GENERATE' button.

5. Click **Generate**, to display the **Link ID number**.

6. Copy the **Link ID number**,
7. Send the link, via email or other secure transfer, to the appropriate contact at the company or tenant you would like to connect with.
8. Click **Close**.

Accepting a Relationship Initiated by Another Tenant

Accepting a relationship initiated by another tenant is a two-step process.

- ["Confirm a Relationship" below](#)
- ["Establish your Tenant as a Customer" on the next page](#)

Confirm a Relationship

To confirm a relationship with another tenant who has sent a request to you:

1. Select the **Administration** view.

The **User Management** page appears.

User Management

Users Roles Groups Search Text [EXPORT] + ADD USER

6 found Display: 25 50 100

SELECT ALL

	USER NAME	FIRST NAME	LAST NAME	EMAIL	PHONE NUMBER	ROLE NAME	STATUS	LAST LOGIN DATE	
<input type="checkbox"/>	BrownD	Bob	Brown	yeu-li.huang@microfocus.com		Developer	Inactive	2020/02/17	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangE2	Edward	Huang	huange2@fod.com		Executive	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangLDev2	julie	Huang	julieh@fod.com		Lead Developer	Inactive	2019/07/25	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangR2	Cony	Huang	huangr2@fod.com		Reviewer	Active	2020/11/04	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE
<input type="checkbox"/>	HuangSLead2	Sally	Huang	sallyh@fod.com		Security Lead	Active	2021/03/10	EDIT ASSIGN APPLICATIONS VIEW APPLICATIONS DELETE

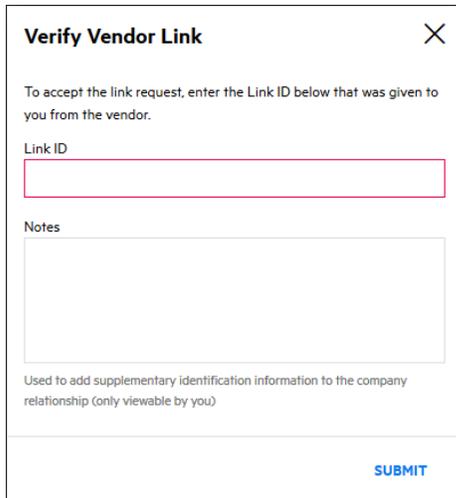

2. Click **Vendors**.

The **Vendor Management** page opens, displaying the **My Vendors** and **Customers** tabs. In this context, “Vendors” means tenants you can receive reports from, and “Customers” means tenants you can send reports to.

Establish your Tenant as a Customer

To establish your tenant as a “Customer” (that is, one that can receive reports from other tenants):

1. Click **My Vendors**.
2. Click **Verify Vendor Link**.

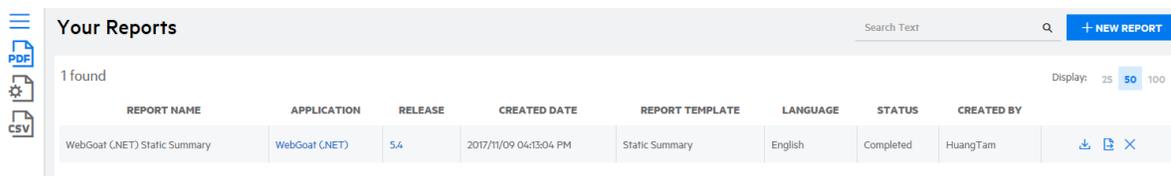

3. Paste the **Link ID** you received from the other tenant.
4. (Optional) Add supplementary notes about the company relationship (For example: subsidiary, or AUS division). These notes are viewable only to you.
5. Click **Submit**.

Publishing a Vendor Management Report

Once you have established a relationship with another tenant in Fortify on Demand, you can “publish” your reports so that tenant can review them.

To share a report with an approved vendor:

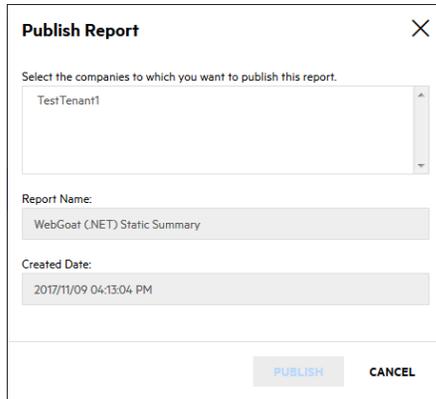

1. Select the **Reports** page.
A new screen appears, with a list of all reports that have been generated for your tenant.
2. Click the name of the report you want to share. The page refreshes with the **Reports Details** below the reports list.

REPORT NAME	APPLICATION	RELEASE	CREATED DATE	REPORT TEMPLATE	LANGUAGE	STATUS	CREATED BY
WebGoat (NET) Static Summary	WebGoat (NET)	5.4	2017/11/09 04:13:04 PM	Static Summary	English	Completed	HuangTam

3. Click .

The **Publish Report** window appears. If you have relationships established with other tenants, those tenants' names appear in the white box.

Publish Report [X]

Select the companies to which you want to publish this report.

TestTenant1

Report Name:
WebGoat (NET) Static Summary

Created Date:
2017/11/09 04:13:04 PM

PUBLISH CANCEL

4. Select the tenant name to which you want to send the report, and click **Publish**.

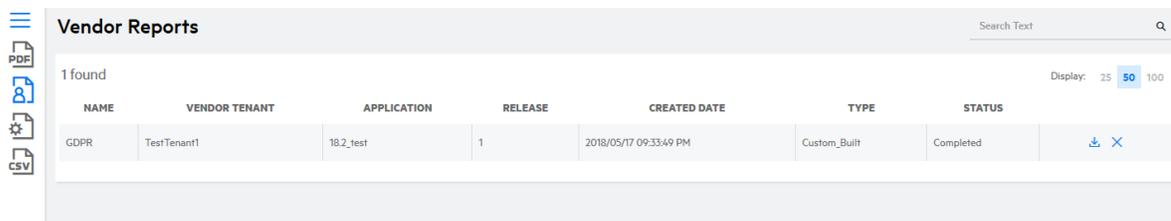

A note appears informing you that the report has been queued for publishing and will be sent to the other tenant.

Viewing Published Report

After another tenant has published a report to you (that is, “shared” a report with your tenant), you may view that report by following these steps:

1. Select the **Reports** page.
2. Click **Vendor Report**.

A **Report List** appears, showing the reports that have been shared with you by other tenants.

Vendor Reports								Search Text	Q	
1 found								Display: 25	50	100
NAME	VENDOR TENANT	APPLICATION	RELEASE	CREATED DATE	TYPE	STATUS				
GDPR	TestTenant1	18.2_test	1	2018/05/17 09:33:49 PM	Custom_Built	Completed	 			

3. Highlight a report from the list, click **Download Report** in the **Action** column.

A note appears informing you that the report is available to you in PDF format in your system Downloads folder.

Note: If **Vendor Report** does not appear in the list of report types screen, that means no reports have yet been shared by another tenant. Check to make sure that you and the other tenant have both completed all the steps required to create a successful sharing relationship and that a specific report has been “published” to you.

Chapter 8: Fortify on Demand API

Fortify on Demand provides a RESTful Application Programming Interface (API) that allow users to carry out various tasks and access application and release data. The latest version of the API is version 3. The API root URL is determined by the tenant's data center:

Data Center	API Root URL
AMS	https://api.ams.fortify.com
EMEA	https://api.emea.fortify.com
APAC	https://api.apac.fortify.com
SGP	https://api.sgp.fortify.com
FedRAMP	https://api.fed.fortifygov.com
Trial	https://api.trial.fortify.com

Note: The Fortify on Demand API does not support cross-origin resource sharing (CORS).

This section contains the following topics:

- [API Authentication](#) 324
- [API Scopes](#) 326
- [Personal Access Tokens](#) 327
- [Viewing API Documentation through API Explorer](#) 329
- [Testing API Endpoints through API Explorer](#) 331
- [API Rate Limits](#) 334

API Authentication

Authentication of Fortify on Demand API requests is through a bearer token. Obtain a bearer token by sending a request to the token endpoint.

To authenticate Fortify on Demand API calls:

1. Make a POST request to the token endpoint `<datacenter_root_url>/oauth/token` with the following body parameters:

Note: For a list of data center API root URLs, see "[Fortify on Demand API](#)" above.

Body Parameter	Description
scope	Scopes granted to an access token (in lower case). Separate multiple scope values with a space. For a list of scopes, see "API Scopes" on the next page .
grant_type	Grant type (in lower case): <ul style="list-style-type: none">password: user credentials (Resource Owner Password Credentials)client_credentials: API key and secret
username	Account username as <code><tenant_code>\<username></code> . Your tenant code and username are displayed in your account settings. Enclose the username with quotation marks to escape special characters.
password	Account password or personal access token. Enclose the password with quotation marks to escape special characters. Note: SSO users are restricted to using personal access tokens. Note: If a personal access token is used as a password and the specified scopes do not make up a subset of the personal access token's allowed scopes, the authentication will fail. For more information on personal access tokens, see "Personal Access Tokens" on page 327 .
client_id	API key
client_secret	API secret

A token in a JSON response named "access_token" is returned.

2. Use this token in the Authorization header as a Bearer token:

```
Authorization: Bearer {token}
```

The following is an example request to get a bearer token using user credentials:

```
curl --request POST 'https://api.ams.fortify.com/oauth/token' \  
--form 'scope="api-tenant"' \  
--form 'grant_type="password"' \  
--form 'username="myTenantCode\myUsername"' \  
--form 'password="myPassword"'
```

The following is an example request to get a bearer token using an API key and secret.

```
curl --request POST 'https://api.ams.fortify.com/oauth/token' \  
--header 'Content-Type: application/x-www-form-urlencoded' \  
--data-urlencode 'scope=api-tenant' \  
--data-urlencode 'grant_type=client_credentials' \  
--data-urlencode 'client_id=myApiKey' \  
--data-urlencode 'client_secret=myApiSecret'
```

API Scopes

Scopes limit the access that is granted to access tokens. They do not grant additional permissions beyond what a user currently has. You can view the details of an endpoint in API Explorer to see its allowed scopes.

The following table lists the available scopes:

Scope	Description
api-tenant	Grants access to all endpoints
start-scans	Configure and start static, dynamic, and mobile scans; import static and dynamic scans
manage-apps	Manage applications
view-apps	View applications
manage-issues	Manage issues
view-issues	View issues
manage-reports	Manage reports
view-reports	View reports
manage-users	Manage users
view-users	View users
manage-notifications	Manage notifications
view-tenant-data	View data at the tenant level

Personal Access Tokens

Personal access tokens are unique keys tied to the user who generated them. They function as alternate passwords that are used to authenticate to the API; they have the user's permissions and can be further restricted with scopes. Using personal access tokens bypasses two-factor authentication and SSO requirements set in the portal.

Note: Personal access tokens cannot be used to log in to the portal.

Personal access tokens provide a flexible and secure method of authentication for integrations with Fortify on Demand. Users can have multiple tokens with different scopes for specific needs, specify token expiration dates, and disable tokens at any time.

Fortify on Demand sends email and portal notifications 14 days before a personal access token expires. An expired personal access token cannot be used unless a new secret is generated.

This section covers the following topics:

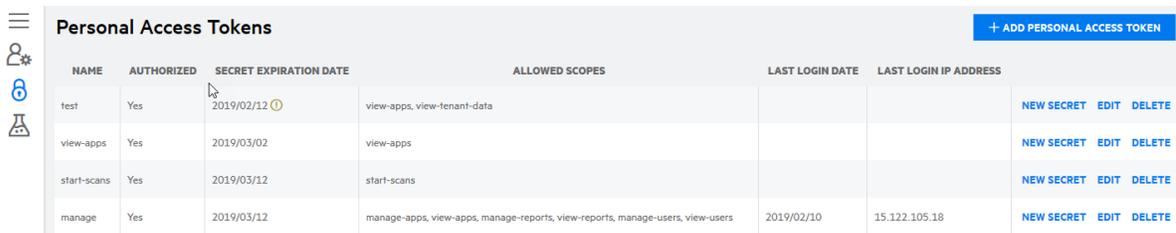

Creating a Personal Access Token	327
Editing or Deleting a Personal Access Token	329

Creating a Personal Access Token

To create a personal access token:

1. Click your account name and select **Personal Access Tokens**.

The Personal Access Tokens page appears.

NAME	AUTHORIZED	SECRET EXPIRATION DATE	ALLOWED SCOPES	LAST LOGIN DATE	LAST LOGIN IP ADDRESS	
test	Yes	2019/02/12	view-apps, view-tenant-data			NEW SECRET EDIT DELETE
view-apps	Yes	2019/03/02	view-apps			NEW SECRET EDIT DELETE
start-scans	Yes	2019/03/12	start-scans			NEW SECRET EDIT DELETE
manage	Yes	2019/03/12	manage-apps, view-apps, manage-reports, view-reports, manage-users, view-users	2019/02/10	15.122.105.18	NEW SECRET EDIT DELETE

2. Click **+Add Personal Access Token**.

The Add/Edit Personal Access Token window opens.

3. Complete the fields. Fields are required unless otherwise noted.

Field	Description
Name	Type a name for the token.
Authorize to use API	The token is enabled by default. Move the slider to No to disable the token.
Secret Expiration Date, Secret Expiration Days	Use the calendar to select an expiration date or type the number of days after which a secret expires. The token will expire at 00:00 PT of the date you set. The expiration date cannot exceed the maximum lifetime as set by the portal.
Allowed Scopes	Select the allowed scopes for the token. For more information on scopes, see "API Scopes" on page 326 .

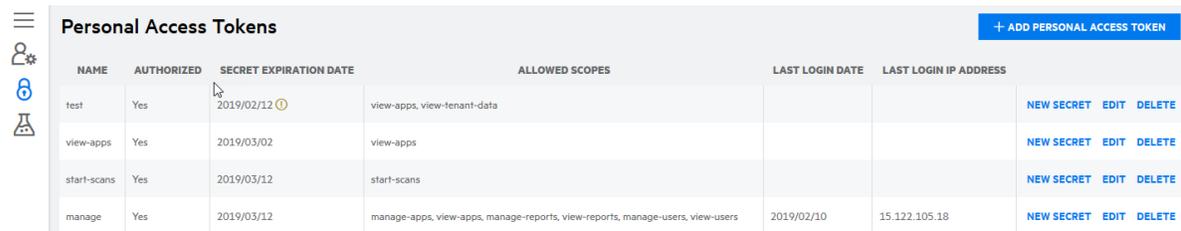

4. Click **Save**.
The Secret Key window opens.
5. Copy your Base64 encoded secret. The secret is only shown once.
6. Click **Close**.
The new token appears in the personal access token list.

Editing or Deleting a Personal Access Token

To edit or delete a personal access token:

1. Click your account name and select **Personal Access Tokens**.

The Personal Access Tokens page appears.

NAME	AUTHORIZED	SECRET EXPIRATION DATE	ALLOWED SCOPES	LAST LOGIN DATE	LAST LOGIN IP ADDRESS	
test	Yes	2019/02/12	view-apps, view-tenant-data			NEW SECRET EDIT DELETE
view-apps	Yes	2019/03/02	view-apps			NEW SECRET EDIT DELETE
start-scans	Yes	2019/03/12	start-scans			NEW SECRET EDIT DELETE
manage	Yes	2019/03/12	manage-apps, view-apps, manage-reports, view-reports, manage-users, view-users	2019/02/10	15.122.105.18	NEW SECRET EDIT DELETE

2. You can perform the following tasks:

Task	Procedure
Generate a new secret	<ol style="list-style-type: none">a. Click New Secret. The New Secret window opens.b. Use the calendar to select an expiration date or type the number of days after which a secret expires. The token will expire at 00:00 PT of the date you set. The expiration date cannot exceed the maximum lifetime as set by the portal.c. Click Create. This will void the current secret.
Edit the token	<ol style="list-style-type: none">a. Click Edit. The Add/Edit Personal Access Token window opens.b. Edit the fields as needed. You cannot edit the current secret's expiration date.
Delete the token	<ol style="list-style-type: none">a. Click Delete. A confirmation message appears.b. Click Yes.

Viewing API Documentation through API Explorer

Fortify on Demand API documentation is provided in the form of API Explorer. API Explorer is built on the Swagger (OpenAPI) framework and is available directly from the portal. This allows the API to be self-documenting and interactive; users can instantly view the latest updates to the API and test calls, as well as use the JSON description of the API to generate stubs and SDKs in different programming languages through open source tools like Swagger Editor and Swagger Codegen.

To view API Explorer:

1. Click your account name on the toolbar and select **API Explorer**.

The API Explorer page opens in a new window, displaying a list of resources.

Authenticate <input type="text" value="access_token"/> Get JSON

            }
          }
        }
      }
    }
  }
}
```

You can paste or import the JSON file in a code generator tool that supports Swagger, such as [Swagger Editor](#) or [Swagger Codegen](#), and generate client stubs or SDKs.

- Click **Show/Hide** to switch between showing and hiding the endpoints.
- Click **List Operations** to view a resource's endpoints.
- Click **Expand Operations** to view the descriptions of all the resource's endpoints.
- Click an endpoint to view its description.

Testing API Endpoints through API Explorer

You can test the version 3 API endpoints in API Explorer.

Important! POST, PUT, and DELETE methods in API Explorer modify the tenant data in the portal.

1. Click **Authenticate** at the top of the API Explorer page.

A modal window opens where you provide your authentication credentials.

Real data will be accessed and modified using the "Try it out!" button for each endpoint.

Exercise extra caution with Post, Put, and Delete endpoints as these will affect production data!

[Help with Authentication](#)

Grant Type
password

Scope
api-tenant

Username

Password

Tenant

If your tenant requires two-factor authentication enter the Security Code

Close Submit

2. Select the method of authentication from the **Grant Type** list:
 - **password**: the user account credentials in the portal
 - **client_credentials**: the API keys generated in the portal
3. In the **Scope** field, type the scopes that will be granted to an access token. Separate multiple scope values with a space. For a list of scopes, see ["API Scopes" on page 326](#).
4. Provide your authentication credentials:

Method of Authentication	Procedure
client_credentials	<ol style="list-style-type: none">a. In the Client ID field, type the API Key. For information on creating an API key, see "Creating an API Key" on page 264.b. In the Client Secret field, type the API secret.
password	<p>Note: You can obtain your tenant code and username from your account settings.</p> <ol style="list-style-type: none">a. In the Username field, type your account username.b. In the Password field, type your account password or your personal access token. <p>Note: If a personal access token is used and the specified scopes are not a subset of the personal access token's allowed scopes, the authentication will fail.</p> <ol style="list-style-type: none">c. In the Tenant field, type your tenant code.d. (Required if two-factor authentication is enabled) In the Security Code field, type the security code you received as part of two-factor authentication.

5. Click **Submit**.

An access token is generated for the session.

6. Expand an endpoint and complete the parameters in the fields provided.

GET /api/v3/applications/{applicationId} Retrieves an individual application by id

```

API Rate Limits

Fortify on Demand implements API rate limiting on a per endpoint and per user or key basis.

The following endpoints are unthrottled:

- PUT /api/v3/releases/{releaseId}/dynamic-scans/import-scan
- POST /api/v3/releases/{releaseId}/mobile-scans/start-scan
- PUT /api/v3/releases/{releaseId}/mobile-scans/import-scan
- POST /api/v3/releases/{releaseId}/static-scans/start-scan
- PUT /api/v3/releases/{releaseId}/static-scans/import-scan

The following table lists the rate limits for throttled endpoints.

Endpoint	Max Requests	Seconds
POST /api/v3/applications	6	30

Endpoint	Max Requests	Seconds
PUT /api/v3/applications/{applicationId:int}	1	30
GET /api/v3/eventlogs/download	1	300
POST /api/v3/releases	6	30
PUT /api/v3/releases/{releaseld:int}	1	30
POST /api/v3/releases/{releaseld:int}/dynamic-scans/start-scan	1	30
GET /api/v3/releases/{releaseld:int}/fpr	1	30
Note: The rate limit is per scan type.		
GET /api/v3/releases/{releaseld:int}/vulnerabilities/{vulnId}/all-data	1	1
POST /api/v3/releases/{releaseld:int}/vulnerabilities/bug-link	1	5
POST /api/v3/releases/{releaseld:int}/vulnerabilities/bulk-edit	1	5
Other endpoints	10	1

Tracking Rate Limits

When calling an API endpoint, the response HTTP header provides the rate limit and how quickly you are approaching the rate limit:

- X-Rate-Limit-Limit: the maximum number of requests
- X-Rate-Limit-Remaining: the number of requests remaining
- X-Rate-Limit-Reset: the number of seconds until the rate limit resets

When you reach the rate limit for an API endpoint, the API returns an HTTP 429 "Too Many Requests" response status code along with a response message such as:

```
{
  "errors": [
    {
      "errorCode": null,
      "message": "Rate limit of 1 request(s) every 15 second(s) has been exceeded"
    }
  ]
}
```

```
}
```

Best Practices To Avoid Rate Limiting

To avoid rate limiting when calling the API, use the following best practices to reduce and regulate the number of API requests:

- Cache frequently used data.
For API endpoints that are frequently used, cache the API responses and load the cached responses when requesting the data.
- Eliminate any unnecessary API calls.
Examine requests obtaining data that isn't being utilized and requests submitting data to Fortify on Demand without any changes.
- Regulate the request rate
If you regularly reach the rate limit, consider including a process that regulates the rate of your requests so that they fall within the given rate limits. You can regulate the request rate statically by setting a fixed request rate or dynamically by tracking requests and regulating them when approaching the rate limit.

Chapter 9: Integrations and Tools

Fortify on Demand offers a variety of integrations and tools to help your organization integrate application security testing into your DevOps processes.

This section contains the following topics:

- [CICD Tools](#)337
- [IDE Tools](#)338
- [Scan Preparation and Tracking Tools](#)345
- [Viewing and Downloading Tools](#)347
- [Portal Integrations](#)347
- [Training Courses](#)375

CICD Tools

The following Continuous Integration and Continuous Delivery (CICD) integration tools enable static and dynamic testing to be integrated into existing build automation:

CICD Tool	Description	More Information
FoDUploader	Stand-alone utility for uploading code from a build server to Fortify on Demand for static scanning	Github
Fortify on Demand Jenkins Plugin	Jenkins plugin for uploading code to Fortify on Demand and submitting static scans as build tasks	Fortify on Demand Jenkins Plugin Documentation
Fortify Azure DevOps Extension	Azure DevOps extension for: <ul style="list-style-type: none"> • Uploading code to Fortify on Demand and submitting static scans as build and release tasks • Submitting dynamic scans as build and release tasks 	Fortify Azure DevOps Extension Documentation
Fortify Bitbucket Pipelines	Collection of Bitbucket pipelines for: <ul style="list-style-type: none"> • Uploading code to Fortify on Demand and 	Bitbucket

CICD Tool	Description	More Information
	submitting static scans	
Fortify GitHub Actions	Collection of GitHub actions for: <ul style="list-style-type: none"> Uploading code to Fortify on Demand and submitting static scans 	GitHub
Fortify GitLab CI Templates	Collection of GitLab templates for: <ul style="list-style-type: none"> Uploading code to Fortify on Demand and submitting static scans 	GitLab
Fortify CI Tools	Docker container for simplifying integration of Fortify static application security testing for DevSecOps pipelines that use configurable runners to execute CICD workflows	Docker Hub

IDE Tools

The following Integrated Development Environment (IDE) tools enable developers to upload code from IDEs to Fortify on Demand for static testing:

Note: Documentation for each IDE tool is now available as a stand-alone guide.

IDE Tool	Description	More Information
Eclipse Plugin	Eclipse plugin for uploading code to Fortify on Demand for static scanning and opening scan results for remediation	Fortify on Demand Plugin for Eclipse
IntelliJ IDEA Plugin	IntelliJ IDEA plugin for uploading code to Fortify on Demand for static scanning and opening scan results for remediation	Fortify on Demand Plugin for IntelliJ IDEA
Visual Studio Extension	Visual Studio extension for uploading code to Fortify on Demand for static scanning and opening scan results for remediation	Fortify on Demand Extension for Visual Studio
Fortify Extension for Visual Studio Code	Visual Studio Code extension for uploading code for static scanning	Fortify Visual Studio Code Extension Documentation

IDE Tool	Description	More Information
Fortify Security Assistant for Eclipse	<p>Fortify Security Assistant for Eclipse provides alerts to potential security issues in Java files as you write code.¹</p> <p>It includes semantic and intra-class dataflow analyzers to detect:</p> <ul style="list-style-type: none"> • Potentially dangerous uses of functions and APIs • Issues caused by tainted data reaching vulnerable functions and APIs at the intra-class level 	Fortify Security Assistant Plugin for Eclipse Documentation
Fortify Security Assistant for IntelliJ and Android Studio	<p>Fortify Security Assistant for IntelliJ and Android Studio provides alerts to potential security issues in Java files as you write code.¹</p> <p>It includes structural and configuration analyzers to detect:</p> <ul style="list-style-type: none"> • Potentially dangerous uses of functions and APIs • Insecure application configurations in property and XML files 	Fortify Security Assistant Plugin for IntelliJ IDEA Documentation
Fortify Security Assistant for Visual Studio	<p>Fortify Security Assistant for Visual Studio provides alerts to potential security issues in C# (.cs), Razor (.cshtml), WebForms (.aspx), .config, .xml, and .ini files as you write code.¹</p> <p>It includes structural and configuration analyzers to detect:</p> <ul style="list-style-type: none"> • Potentially dangerous uses of functions and APIs • Insecure application configuration 	Fortify Security Assistant Extension for Visual Studio Documentation

¹Fortify Security Assistant requires a valid license file to scan for issues and to install or update Fortify security content. Fortify on Demand offers a license valid for up to 10 developers per each application that is under an active static assessment subscription. The license is valid for all Fortify Security Assistant versions.

FoDUploader

Fortify on Demand provides a build server integration (BSI) tool called FoDUploader to help you upload application code from a build server. FoDUploader runs from the command-line on all major operating systems and thus can easily be integrated into a build script.

The benefits of using FoDUploader include:

- Sending files to Fortify on Demand without size limitations aside from those specified in "[Static Assessment File Requirements](#)" on page 91
- Transmitting files securely from a client workstation to Fortify on Demand
- Transmitting through a proxy, if required
- API key pair or PAT authentication

Downloading FoDUploader

FoDUploader is available as a Java application named `FoDUpload.jar`. `FoDUpload.jar` and its source code is hosted at <https://github.com/fod-dev/fod-uploader-java>.

Running FoDUploader

Prerequisite: Java 8 or later must be installed.

To run FoDUploader:

In a command-line interface, run `FoDUpload.jar` with the appropriate arguments. You can also insert the command in your build script to integrate with your build server. The basic syntax is:

```
java -jar FoDUpload.jar -z "<zip_file_path>" {-ac <key> <secret>|-uc  
<username> <password>} {-rid <reLID>|-bsi <token>} -purl <purl> -aurl  
<aurl> -tc <tcode> -ep  
{1|SingleScanOnly|2|SubscriptionOnly|3|SingleScanFirstThenSubscription|4|Su  
bscriptionFirstThenSingleScan}
```

If the command is properly executed, the command-line displays the bytes sent and the upload status. Otherwise, the command-line displays an error message indicating the part of the command that is incorrect.

FoDUploader Arguments

The following table describes the FoDUploader arguments. Arguments can be specified in any order.

Note: Flag arguments are false by default. Include a flag to set it to true—you do not need to specify true or false.

Note: Arguments are for version 5.4.1. Details on the latest release is available at <https://github.com/fod-dev/fod-uploader-java>.

Argument	Short Name	Required	Description
-zipLocation	-z	Yes	Location of the zip file. Enclose the path with quotation marks to escape special characters.
-entitlementPreferenceType	-ep	Yes	Entitlement preference: 1/SingleScanOnly, 2/SubscriptionOnly, 3/SingleScanFirstThenSubscription, 4/SubscriptionFirstThenSingleScan If multiple entitlements are available, the scan will use the oldest entitlement. If the release has an active subscription, the scan will use the active subscription.
-apiCredentials	-ac	Yes ¹	API key and secret.
-userCredentials	-uc	Yes ¹	Your user credentials. Enclose the username and password separately with quotation marks to escape special characters.
-bsiToken	-bsi	Yes ²	BSI token.
-releaseId	-rid	Yes ²	Release ID. The release must have saved scan settings in the portal for the release ID to be used as a token.
-portalurl	-purl	Yes ³	Domain URL.
-apiurl	-aurl	Yes ³	API root URL.
-tenantCode	-tc	Yes ³	Tenant code if using user credentials.
-assessmentTypeld	-at	Yes ⁴	Assessment type ID.

Argument	Short Name	Required	Description
-entitlement	-eid	Yes ⁴	Entitlement ID.
-technologyStackId	-ts	Yes ⁴	Technology stack as an integer: 32 (Auto Detect) 1 (.NET), 23 (.Net Core), 2 (ABAP), 21 (Apex/Visualforce), 3 (ASP), 5 (CFML), 6 (COBOL), 29 (Dart/Futter) 22 (Go), 27 (Infrastructure-As-Code/Dockerfile), 7 (JAVA/J2EE/Kotlin), 16 (JS/TS/HTML), 18 (MBS/C/C++/Scala), 9 (PHP), 10 (PYTHON), 28 (React Native), 17 (Ruby), 12 (Swift/Objective C/C++), 11 (VB6), 14 (VBScript)
-languageLevelId	-l	Yes ⁴	Language level as an integer: <ul style="list-style-type: none"> .NET: 2 (2.0), 3 (3.0), 4 (3.5), 5 (4.0), 11 (4.5), 15 (4.6), 16 (4.7), 30, (4.8), 32 (5.0), 33 (6.0), 35 (7.0), 38 (8.0) .NET Core: 23 (1.0), 24 (1.1), 25 (2.0), 26 (2.1), 27 (2.2), 28 (3.0), 29 (3.1) Java: 8 (1.5), 9 (1.6), 10 (1.7), 12 (1.8), 17 (1.9), 19 (10), 20 (11), 21 (12), 22 (13), 31 (14), 34(17), 39 (21) Python: 13 (2), 14 (2 Django), 18 (3), 37 (4.2 Django), 40 (5.0 Django)
-auditPreferenceId	-a	Yes ⁴	Audit preference: Manual, Automated
-isBinaryScan	-bs	No ⁴	Scan compiled and source code

Argument	Short Name	Required	Description
			(the feature must be enabled).
-allowopenSourceComponentAnalysis	-os	No ⁴	Include open source component analysis
-remediationScanPreferenceType	-rp	No	Remediation scan preference: 0/RemediationScanIfAvailable, 1/RemediationScanOnly, 2/NonRemediationScanOnly (default)
-inProgressScanActionType	-pp	No	If an in-progress scan exists, the action to take for the new scan: 0/DoNotStartScan (default), 1/CancelScanInProgress, 2/Queue This only applies if the in-progress scan can be automatically cancelled.
-pollingInterval	-l	No	Length of time in minutes between polling Fortify on Demand for the scan status. Polling stops once a scan is canceled, completed, or paused. If the polling interval is not set or set to 0, no polling is done. Exit codes: <ul style="list-style-type: none"> • 0 = success, scan completed and passed policy • 1 = failure, scan completed and failed policy • 3 = failure, scan canceled • 4 = failure, scan paused
-purchaseEntitlement	-purchase	No	Purchase an entitlement if none is available (the feature needs to be

Argument	Short Name	Required	Description
			enabled).
-allowPolicyFail	-apf	No	Return exit(0) instead of exit(1) if the scan fails the security policy specified in Fortify on Demand
-proxy	-P	No	Proxy connection details (order dependent): <ul style="list-style-type: none">• The proxy host defined with a protocol (such as http)• The account credentials on the proxy server• The proxy server's domain name for NTLM authentication• The proxy server's host name for NTLM authentication
-notes	-n	No	Adds notes about the scan.
-help	-h	No	Prints the help dialog.
-version	-v	No	Prints the FoDUploader version.

¹ Use either API credentials or user credentials.

² Use either release ID or BSI token. If both are provided, then the scan settings that are retrieved from the release ID will be used.

³ Required if BSI token is not provided.

⁴ Required if neither release ID nor BSI token is provided. Provided values override existing release ID or BSI token settings.

Examples

Command-line examples:

```
java -jar FodUpload.jar -z package.zip -purl https://ams.fortify.com -aurl https://api.ams.fortify.com -tc AcmeCo -uc myUsername myPersonalAccessToken -rid 123456 -ep 2
```

Static Scanning Tool	Description	More Information
		Files" on page 97
Fortify ScanCentral SAST client	Stand-alone Fortify ScanCentral SAST client for packaging source code	"Installing and Using the Fortify ScanCentral SAST Client" on page 92
Fortify Audit Workbench	Tool for viewing and auditing FPR files	Fortify Static Code Analyzer and Tools Documentation

The following tools are used to prepare web applications for dynamic scanning.

Dynamic Scanning Tool	Description	More Information
Fortify WebInspect Workflow Macro Recorder	Stand-alone utility for creating workflow macros	Fortify WebInspect Documentation
Fortify WebInspect Login Macro Recorder	Stand-alone utility for creating login macros	Fortify WebInspect Documentation

Fortify Bug Tracker	Stand-alone utility for submitting Fortify on Demand issues to bug trackers	GitHub

Tracking tools include:

Tool	Description	More Information
Fortify FoD-SSC Sync	Stand-alone utility for automated, scheduled synchronization of Fortify on Demand applications, releases, and scans with Fortify Software Security Center (SSC)	GitHub
Fortify Bug Tracker	Stand-alone utility for submitting Fortify on Demand issues to bug trackers	GitHub

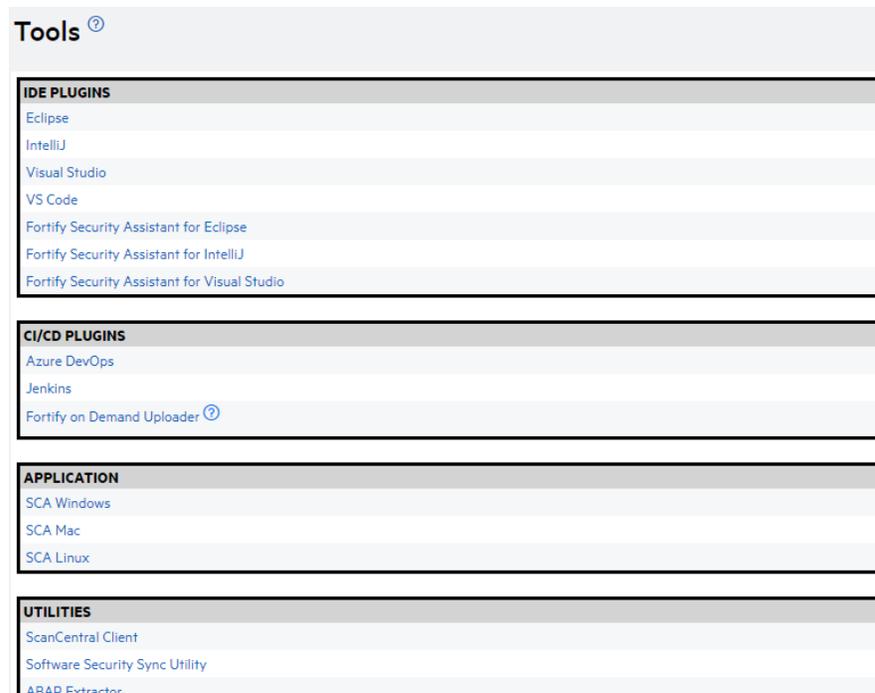

Viewing and Downloading Tools

You can view and download the tools available for use with Fortify on Demand.

To view the available tools:

1. Click your account name and select **Tools** from the list.

The Tools page appears.

2. Click the links for installers, licenses, and usage instructions.

Note: Usage of most tools does not require a license. Contact support to request a license if you meet the following conditions:

- Fortify Static Code Analyzer: you want to scan C, C++, and Scala code
- Fortify Audit Workbench: you want to view FPR files
- Fortify Security Assistant: you have an active static subscription

Portal Integrations

Fortify on Demand offers a variety of integrations that are managed through the portal.

This section contains the following topics:

[Bug Tracker Integration](#) 348

External Scan Integration	356
Secure Code Warrior Integration	360
Slack Integration for Notifications	361
Source Control Integration	365
Tracking Configured Integrations	367
Webhooks	369

Bug Tracker Integration

For tenants that want to link vulnerability results to their bug tracking tools, Fortify on Demand offers bug tracker integration for the latest versions of the following bug trackers:

- OpenText Application Lifecycle Management (ALM)
- OpenText Application Lifecycle Management Octane (ALM Octane)
- Jira
- Bugzilla
- Azure DevOps/Azure DevOps Server.

Users can submit issues as bugs to a supported bug tracker and manage the bugs directly from the portal. For non-supported bug trackers, users can manually add bug tracker links to issues.

This section contains the following topics:

Configuring Bug Tracker Integration	348
Submitting Issues to the Bug Tracker	351
Manually Linking an Issue	354

Configuring Bug Tracker Integration

Bug tracker integration is configured at the application level. You must establish a connection between Fortify on Demand and your bug tracker server (VPN is not an option for establishing the connection). The server will need a dedicated user account for adding and closing bugs.

To configure bug tracker integration for an application:

1. Select the **Applications** view.
Your Applications page displays.
2. Click the application for which you want to configure bug tracker integration.
The application Overview page appears.
3. Click **Settings**.
The Settings page appears.

WebGoat (.NET)

Application Summary

Application Summary Application Attributes Bug Tracker Source Control

Enable Bug Tracker Integration

Yes

Fortify on Demand bug tracker integration requires access from the following IP ranges and networks:
74.221.229.249/32

Bug Tracker: Atlassian JIRA

Atlassian JIRA URL: http://fodqa-jira:8080/

Username: TAMUser Password: [REDACTED]

Requester Account ID: [REDACTED]

AUTHENTICATE

Domain: [REDACTED] Component: [REDACTED]

Enable Bug State Management: No

Sync Developer Status with Bug Tracker Status: No

Note: New bug tracker comments are included in the sync.

SAVE DELETE APPLICATION

7. In the **URL** field, type the URL of your bug tracker site.

8. In the **Username** and **Password** fields, type the login credentials that will be used to log in to the bug tracker site.

If you have a cloud JIRA instance where the Reporter field is required, in the **Requester Account ID** field, type the user ID associated with the provided **Username**.

Important! Atlassian ended support for basic authentication with password and cookie-based authentication for REST APIs.

Microsoft ended support for basic authentication with password for REST APIs.

9. Click **Authenticate**.

An "Authenticated" message appears if the authentication was successful. The list of categories from the bug tracker site is also populated.

Tip: If you are having trouble authenticating to the bug tracker, see the following troubleshooting tips:

- Check that the bug tracker instance is publicly accessible. For example, you can test the accessibility of a Jira instance with the command `curl -D- -u <Jira_userid>:<Jira_password> http://<host>.atlassian.net/rest`
- Enable the bug tracker API, if applicable.
- Check that the account used to log in to the bug tracker has permission to access the bug tracker API.
- Add the Fortify on Demand IP addresses to the allow list in firewalls, IPSs, IDSs, and WAFs. The IP addresses are displayed on the Bug Tracker tab.

10. Select the default category to which application's issues will be submitted. Fields are specific to the selected bug tracker.

ValueEdge/ALM Octane: **Project** and **Workspace**

ALM.Net: **Domain** and **Project**

Jira: **Project** and **Component**

Bugzilla: **Product** and **Component**

Azure DevOps/Azure DevOps Server: **Project**

11. Move the **Enable Bug State Management** slider to **Yes** to enable bug state management. When bug state management is enabled, Fortify on Demand will automatically set bugs to the status listed in the following table once the linked issues have been marked as **Fix Validated** or **Suppressed**. A bug that is linked to multiple issues will not be closed unless all issues are **Fix Validated** or **Suppressed**.

Bug Tracker	Closed Status
ALM Octane	Fixed (phase.defect.fixed)
ALM	Fixed

Jira	Done
Azure DevOps/Azure DevOps Server	Resolved
ALM.Net	Fixed (phase.defect.fixed)
Bugzilla	Status: Resolved, Resolution: Fixed

Note: Fortify on Demand does not reopen bugs that are linked to reopened issues.

12. (Available for Azure DevOps and JIRA) When Bug State Management is enabled, move the **Sync Developer Status with Bug Tracker Status** slider to **Yes** to sync the Fortify on Demand **Developer Status** values with the bug tracker status values. Map the bug tracker status values to the **Developer Status** values.

Note: The **Developer Status** field of a submitted issue can no longer be edited in Fortify on Demand, as the **Developer Status** is automatically synced with the bug tracker status value. New bug tracker comments are included in the sync.

13. (Available for Azure DevOps) Specify default values for custom fields when submitting bugs. If applicable, default values from Azure DevOps are populated. Required custom fields are marked in red.

To reset field values to Azure DevOps default values, clear the fields.

Custom Fields

Field2

Field4

14. Click **Save**.

Your bug tracker settings are saved.

Submitting Issues to the Bug Tracker

Once bug tracker integration is configured for an application, a user with Application Access and Edit Issues permissions can submit Fortify on Demand issues as bugs to the bug tracker. The portal prevents issues from being submitted more than once.

To submit issues to the bug tracker:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application with issues that you want to submit to a bug tracker.
The Application Overview page appears.
3. Navigate to the Application Issues or Release Issues page:

- To navigate to the Application Issues page:
 - Click **Issues**.The Application Issues page appears.

The screenshot shows the 'Application Issues' page. On the left, there is a sidebar with a search bar and a list of vulnerabilities. The selected vulnerability is '236150 http://zero.webappsecurity.com:80/acctxfercon...'. The main content area displays the following information:

- Summary:** A Unicode conversion Cross-Site Scripting (XSS) vulnerability was found. This vulnerability is due to an input validation error in the filtration of special HTML characters supplied as Unicode characters. If exploited, an attacker could craft a malicious link containing arbitrary HTML or script code to be executed in a user's browser. Recommendations include modifying the web.config file to use only Unicode code page for output or filtering full-width ASCII characters from all non-trusted data sources.
- Explanation:** The application fails to properly validate Unicode characters in the "Request Validation" and "HttpServerUtility.HtmlEncode" security mechanisms. If exploited, an attacker could control the Web browser of other Web users who view the page by embedding malicious HTML tags and JavaScript. An attacker could use this technique to steal sensitive information such as credit card numbers, usernames, passwords, files, and session identifiers from the Web users.
- Instance ID:** 2875ee6f-6083-4b8e-b035-d763108e54fc
- Primary Rule ID:** 5172
- Standards and Best Practices:**
 - OWASP 2021
 - A03 - Injection
 - OWASP 2017
 - A7 - Cross-Site Scripting (XSS)
 - OWASP 2014 Mobile Top 10
 - M7 - Client Side Injection
 - PCI 3.2
 - 6.5.7 - Cross-Site Scripting (XSS)

The right sidebar contains an 'Audit' panel with a search bar and a list of filters. The filters include: CUSTOM QUERIES, CANNED QUERIES, SEVERITY, CATEGORY, ASSIGNED USER, PACKAGE, SCAN TYPE, DEVELOPER STATUS, HAS COMMENTS, OWASP 2014 MOBILE TOP 10, and OWASP 2017. There is also an 'apply all checked' button.

- To navigate to the Release Issues page:
 - Click the name of a release.
 - Click **Issues**.The Release Issues page appears.

The screenshot shows the 'Release Issues' page. On the left, there is a sidebar with a search bar and a list of vulnerabilities. The selected vulnerability is '236150 http://zero.webappsecurity.com:80/acctxfercon...'. The main content area displays the following information:

- Summary:** A Unicode conversion Cross-Site Scripting (XSS) vulnerability was found. This vulnerability is due to an input validation error in the filtration of special HTML characters supplied as Unicode characters. If exploited, an attacker could craft a malicious link containing arbitrary HTML or script code to be executed in a user's browser. Recommendations include modifying the web.config file to use only Unicode code page for output or filtering full-width ASCII characters from all non-trusted data sources.
- Explanation:** The application fails to properly validate Unicode characters in the "Request Validation" and "HttpServerUtility.HtmlEncode" security mechanisms. The right sidebar contains an 'Audit' panel with a search bar and a list of filters. The filters include: CUSTOM QUERIES, CANNED QUERIES, SEVERITY, CATEGORY, ASSIGNED USER, PACKAGE, SCAN TYPE, DEVELOPER STATUS, HAS COMMENTS, OWASP 2014 MOBILE TOP 10, and OWASP 2017. There is also an 'apply all checked' button.

4. In the navigation panel, select one or more issues that you want to submit. To batch submit issues, select the check boxes next to the issues you want to edit.

Note: If you are on the Application Issues page, selecting the check box next to an issue found in multiple releases selects all instances of the issue.

5. In the audit panel, click **Submit Bug**.

The Submit Bug to <bug_tracker> window opens. The fields are populated with default values, including issue summaries. You can edit the default values.

Submit Bug to Azure DevOps

Project: WebGoat

Subject: FoD Security Vulnerability: 236323

Description: Cross-Site Scripting: Reflected - 1 Issues

Issue Details:
acctxferconfirm.asp: 0 - 236323 - 236323

Severity: 1 - Critical

ISSUE ID	PRIMARY LOCATION
236323	/acctxferconfirm.asp

SUBMIT CANCEL

6. Fortify on Demand supports custom fields in ALM, Jira, and Azure DevOps. If the bug tracker contains custom fields, those fields appear in the **Custom Values (Required)** section. Complete the fields.
7. Click **Submit**.

You are returned to the Issues page. If the issue submission is pending, the audit panel displays a **Bug Pending** status. Once the issue submission is complete, the audit panel displays a **View Bug** button that links to the issue's bug tracker URL.

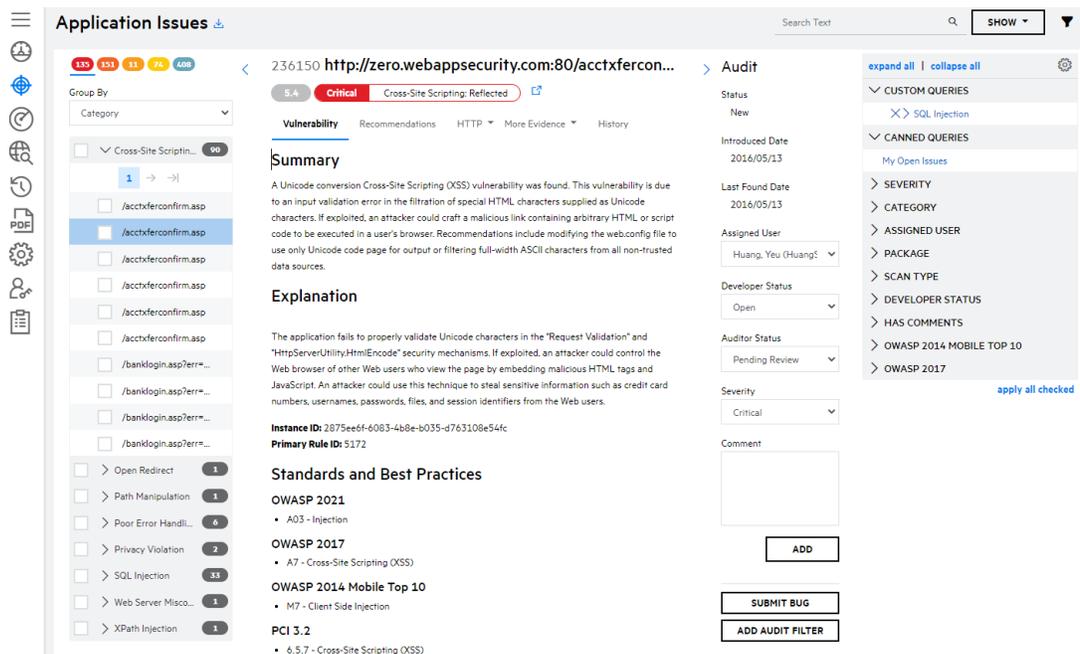

Note: When a release is copied, issues in the bug tracker are updated. Links to the newly copied issues are added to the issue descriptions in the bug tracker.

Manually Linking an Issue

You can manually add a bug tracker link to the issue in the portal. This allows tenants using other bug trackers to track external bugs associated with Fortify on Demand issues.

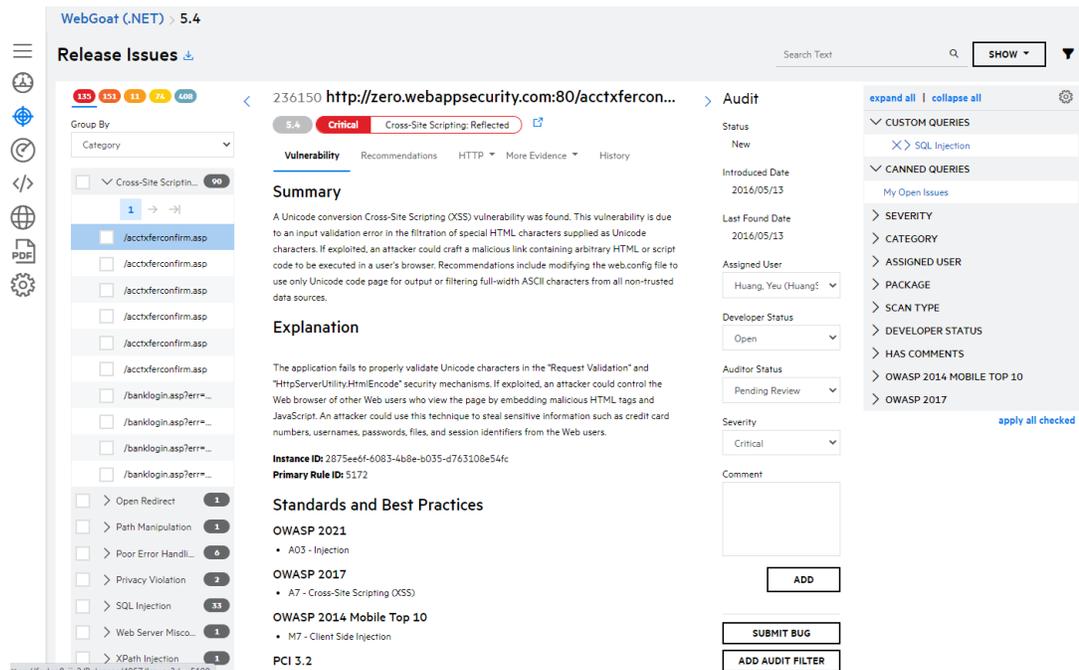

To link a Fortify on Demand issue with an unsupported bug tracker:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application with issues that you want to submit to a bug tracker.
The Application Overview page appears.
3. Navigate to the Application Issues or Release Issues page:
 - To navigate to the Application Issues page:
 - i. Click **Issues**.
The Application Issues page appears.

- To navigate to the Release Issues page:
 - i. Click the name of a release.
 - ii. Click **Issues**.

The Release Issues page appears.

4. In the navigation panel, select one or more issues that you want to submit. To batch submit issues, select the check boxes next to the issues you want to edit.
5. Click **Submit Bug**.

The Submit Bug modal window appears.

Submit Bug ✕

6. In the **Bug URL** field, type the bug tracker link that you want to add to the issue.
7. Click **Save**.

Once the issue submission is complete, the audit panel displays a **View Bug** button that links to the issue's bug tracker URL.

External Scan Integration

You can import scan results from external sources into Fortify on Demand to manage scan results from multiple sources in a single view. Fortify on Demand supports import of the following scan types:

- On-premises Fortify Static Code Analyzer and Fortify WebInspect scan results
- Open source scan results that conform to the CycloneDX 1.4 standard

This section contains the following topics:

Importing an On-Premises Scan	357
Importing a Software Bill of Materials	358
Deleting an Imported Scan	359

Importing an On-Premises Scan

You can import on-premises Fortify Static Code Analyzer and Fortify WebInspect scan results into Fortify on Demand. Upon importing an FPR:

- The scan start and complete times use the scan date in the FPR.
- Global and Application Audit Templates are applied.
- The instance ID provided by Fortify Static Code Analyzer or Fortify WebInspect is used to track issues across imported FPRs. Fortify on Demand does not check for duplicate FPRs.

For example, if you import an FPR into an empty release, all imported issues will have the **New** status. If you import the same FPR again, all issues will change from **New** to **Existing**. If you then import a different FPR, the issue statuses will change as follows:

- Issues that exist in both the release and the latest FPR will have the **Existing** status.
- Issues that only exist in the latest FPR will have the **New** status.
- Issues that exist in the release but do not exist in the latest FPR have the **Fixed** status.
- Suppressed issues in the FPR that are not present in the release are imported and suppressed. Suppression status is ignored for issues in the FPR that are present in the release.

Note: FPRs with a scan date older than the most recently completed scan of the same type are not accepted.

To import a static or dynamic FPR:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears.
3. Click the release for which you want to import an FPR.
The Release Overview page appears.
4. Click **Scans**.
The **Release Scans** page appears.
5. Select **Import Scan > Dynamic | Static**.
The Import Scan window opens.

6. Click ... and navigate to and select the FPR file.
7. Click **Next**.

Once the import is complete, the results appear on the Issues page. The scan appears on the Release Scans page with a "Completed" status and "Imported (WebInspect)" or "Imported (SCA)" assessment type.

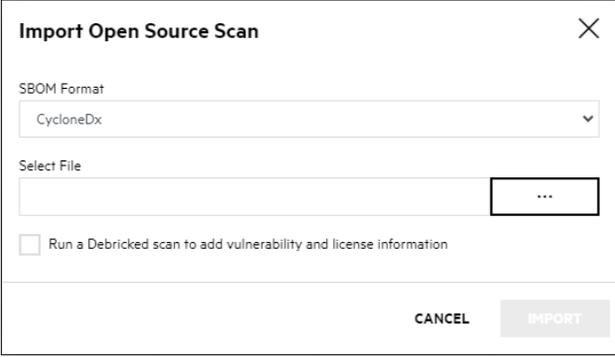

Importing a Software Bill of Materials

Users with the **Manage Applications** permission can import open source scan results, known as software bill of materials (SBOM), from third parties. An SBOM must meet the following requirements to be imported:

- The SBOM is a JSON file that conforms to the CycloneDX 1.4 standard.
- The SBOM contains a single `tools` entry under the `metadata` object.
- The SBOM version is higher than the version of the most recently imported SBOM.

To import a software bill of materials:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears.
3. Click the release for which you want to import an open source scan.
The Release Overview page appears.
4. Click **Scans**.
The Release Scans page appears.
5. Select **Import Scan > Open Source**.
The Import Open Source Scan window opens.

The screenshot shows a dialog box titled "Import Open Source Scan". It features a close button (X) in the top right corner. The "SBOM Format" is set to "CycloneDx" in a dropdown menu. Below this is a "Select File" input field with a file selection button (three dots). At the bottom left, there is a checkbox labeled "Run a Debricked scan to add vulnerability and license information". At the bottom right, there are two buttons: "CANCEL" and "IMPORT".

6. Click ... and navigate to and select the SBOM.
7. If you want to submit a Debricked scan on the SBOM, select **Run a Debricked scan to add vulnerability and license information**.

Note: If this option is selected, a Debricked entitlement will be redeemed for a Debricked subscription assessment. The Debricked subscription is valid for scans on SBOMs imported under the application.

Note: You can submit a Debricked scan at a later time if needed. On the Scans page, locate the imported SBOM and select **Send to Debricked**.

8. Click **Next**.

Once the import is complete, the results appear on the Issues page. The scan appears on the Release Scans page with a "Completed" status and "<toolName> (Imported)" assessment type.

Deleting an Imported Scan

Users with the Manage Applications permission can delete imported scan results files. A scan cannot be deleted if a subsequent scan of the same type has been imported.

To delete an imported scan:

1. Select the **Applications** view.

Your Applications page appears.

2. Click the name of the application for which you want to delete the most recent imported scan.

The Application Releases page appears.

3. Click **Scans**.

The Application Scans page appears, displaying scans ran against the application.

RELEASE	SCAN TYPE	ASSESSMENT TYPE	ENTITLEMENT TYPE	STATUS	STARTED	COMPLETED	# ISSUES	
S.4	Dynamic	Dynamic Express	Subscription	⊗	2017/11/10	2019/05/06		ⓘ ...
S.4	Dynamic	Dynamic Premium	N/A	⊗	2016/05/13	2017/07/19		ⓘ ...
S.4	Static	Static Basic	N/A	⊙	2016/05/13	2016/05/13	34 Critical, 67 High, 0 Medium, 7 Low	ⓘ ...
S.4	Dynamic	Dynamic Premium	N/A	⊙	2016/05/13	2016/05/13	101 Critical, 84 High, 11 Medium, 67 Low	ⓘ ...

Note: You can filter the scan list to only view scans ran against a release by clicking the name of the release from the Application Releases page.

4. Click **Cancel Imported Scan** in the action column of the imported scan.

A confirmation message displays.

5. Click **Yes** to confirm the scan cancellation.

The scan is deleted, along with all issues associated with the scan.

Secure Code Warrior Integration

Fortify on Demand has partnered with Secure Code Warrior to provide free interactive training for supported vulnerability categories to Fortify on Demand customers. When viewing an issue, users can launch a training module from the **Launch Training** link in the **Recommendations** tab of the Issue Details panel.

A module consists of short, hands-on challenges in which users analyze software design and code for the vulnerability and then remediate or mitigate the vulnerability. Sample modules are available in all vulnerability categories supported by Secure Code Warrior. Modules are hierarchically organized by category, subcategory, and language.

Fortify on Demand does not share user and organization information with Secure Code Warrior. Additional training is available for purchase from Secure Code Warrior. For more information, see <https://www.securecodewarrior.com/>.

Launching Secure Code Warrior Training

To launch Secure Code Warrior training for an issue:

1. Select the **Applications** view.
Your Applications page appears.
2. Click **Your Releases**.
Your Releases page appears.
3. Select a release from your list.
4. Click **Issues**.
The Release Issues page appears.
5. In the navigation panel, select an issue in an issue category where Secure Code Warrior training is available.
6. Select the **Recommendations** tab.

5.4 Critical Open Redirect  SMART FIX

Vulnerability **Recommendations** Code Diagram More Evidence ▾ History

Recommendation

Unvalidated user input should not be allowed to control the destination URL in a redirect. Instead, use a level of indirection: create a list of legitimate URLs that users are allowed to specify and only allow users to select from the list. With this approach, input provided by users is never used directly to specify a URL for redirects.

Example 2: The following code references an array populated with valid URLs. The link the user clicks passes in the array index that corresponds to the desired URL.

```
String redirect = Request["dest"];
Int32 strDest = System.Convert.ToInt32(redirect);
if((strDest >= 0) && (strDest <= strURLArray.Length -1 ))
{
    strFinalURL = strURLArray[strDest];
    pageContext.forward(strFinalURL);
}
```

In some situations this approach is impractical because the set of legitimate URLs is too large or too hard to keep track of. In such cases, use a similar approach to restrict the domains that users can be redirected to, which can at least prevent attackers from sending users to malicious external sites.

Tips

1. A number of modern web frameworks provide mechanisms for performing validation of user input. ASP.NET Request Validation and WCF are among them. To highlight the unvalidated sources of input, the HP Fortify Secure Coding Rulepacks dynamically re-prioritize the issues reported by HP Fortify Static Code Analyzer by lowering their probability of exploit and providing pointers to the supporting evidence whenever the framework validation mechanism is in use. In case of ASP.NET Request Validation, we also provide evidence for when validation is explicitly disabled. We refer to this feature as Context-Sensitive Ranking. To further assist the HP Fortify user with the auditing process, the Fortify Security Research Group makes available the Data Validation project template that groups the issues into folders based on the validation mechanism applied to their source of input.

7. In the **Interactive Training** section, you can perform the following tasks:

- To start a training module, click **Launch Training**.
- To watch a video about the issue category, click **Watch Video**.
- To learn more about the issue category, click the links for external educational resources.

NEW Interactive Training

Note: If the issue does not belong to a supported vulnerability category, you are redirected to the Secure Code Warrior home page.

Slack Integration for Notifications

Fortify on Demand offers Slack integration for posting notifications to Slack. Security Leads can configure one or more webhooks for the tenant. Once webhooks have been configured, Security Leads can enable posting notifications to Slack when creating notification subscriptions.

This section contain the following topics:

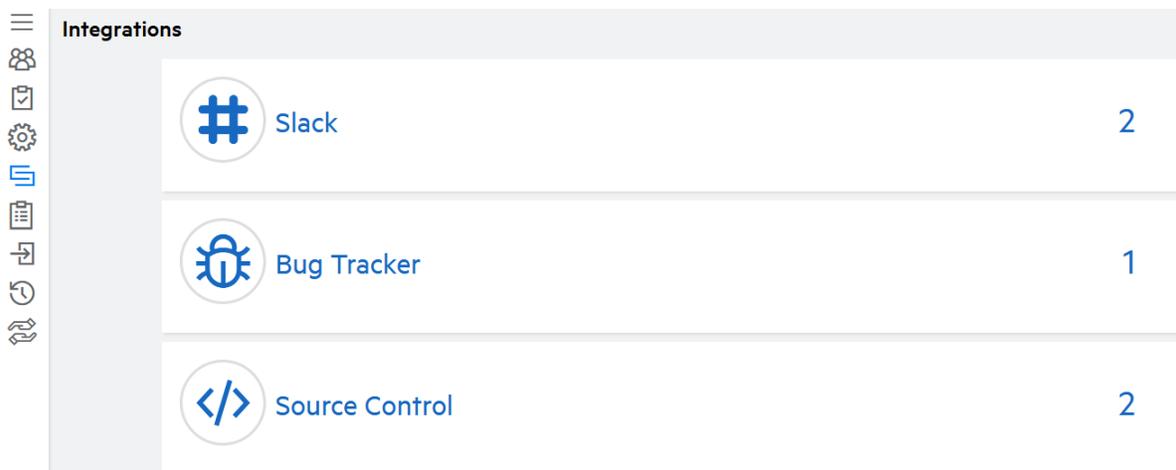

[Configuring Slack Integration](#) 362
[Deleting Slack Integration](#) 363

Configuring Slack Integration

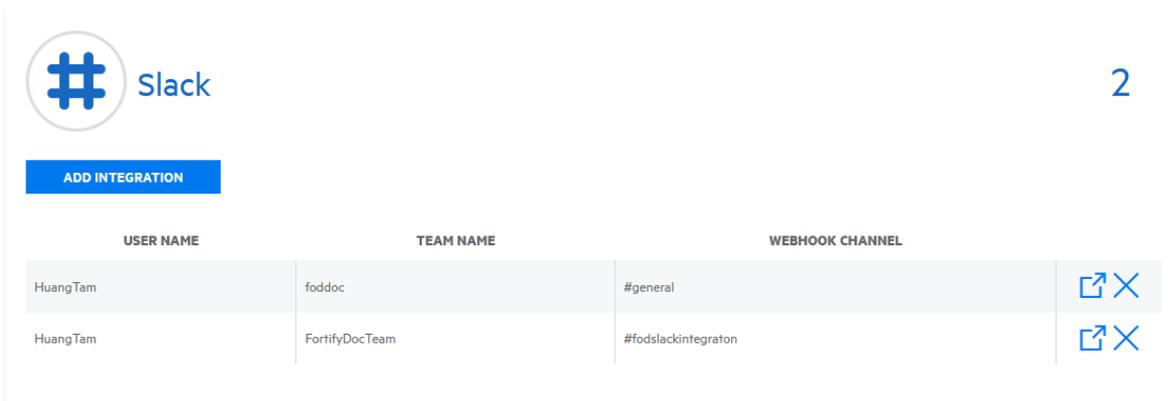

You can configure Slack integration by configuring one or more webhooks for the tenant.

To configure a webhook:

1. Select the **Administration** view.
The **User Management** page appears.
2. Click **Integrations**.
The **Integrations** page appears.

3. Expand the **Slack** section.

4. Click **Add Integration**.
 - If you are currently not signed in to a workspace, you are redirected to the Slack workspace sign in page.

- If you are currently signed in to one or more workspaces, you are redirected to the authorization page.

Note: You must have permission to manage apps and integrations for the workspace

5. If you are not signed in to the workspace to which you want to connect, complete the sign-in process. Otherwise, skip to the next step.
6. Select the workspace, if not already selected, from the list on the top right side of the authorization page.

On foddoc, Fortify on Demand would like to:

Confirm your identity on foddoc

Post to

7. Select the channel or user direct message to which notifications will be posted. The available values are the channels and user accounts to which you have access.
8. Click **Authorize** to authorize Fortify on Demand to access your Slack account.
You are redirected to Fortify on Demand. A "Slack Integration Successful" message appears. You can now enable posting notifications to the channel. For more information on enabling posting notifications to Slack, see ["Creating an Individual Subscription" on page 31](#) and ["Creating a Global Subscription" on page 33](#).

Deleting Slack Integration

You can delete a Fortify on Demand Slack integration in the following ways:

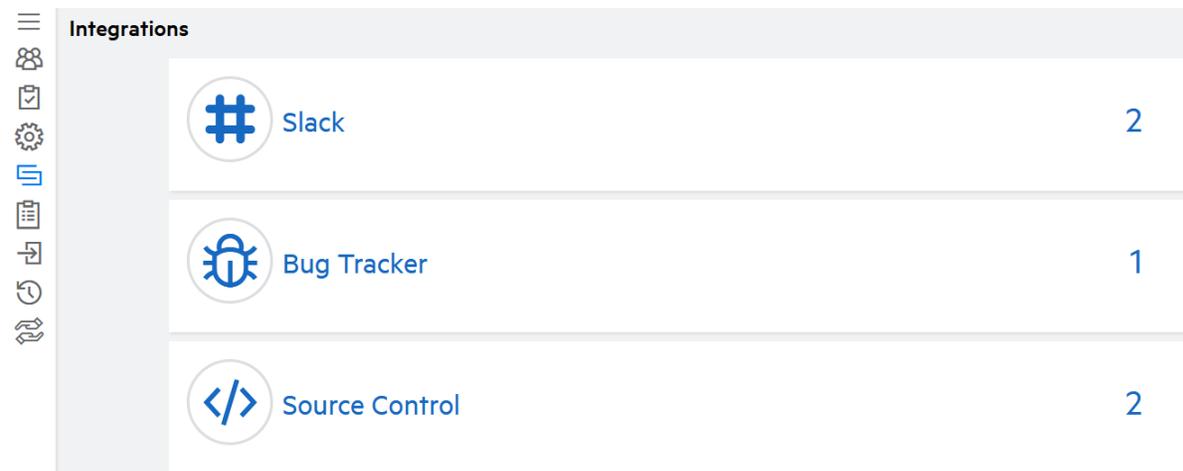

- Slack workspace owners and users who have permission to manage apps can remove specific authorizations or remove the Fortify on Demand application from the Slack workspace. This will cause posts to Slack to fail.
- Security Leads can delete webhooks in Fortify on Demand.

To delete a Slack integration:

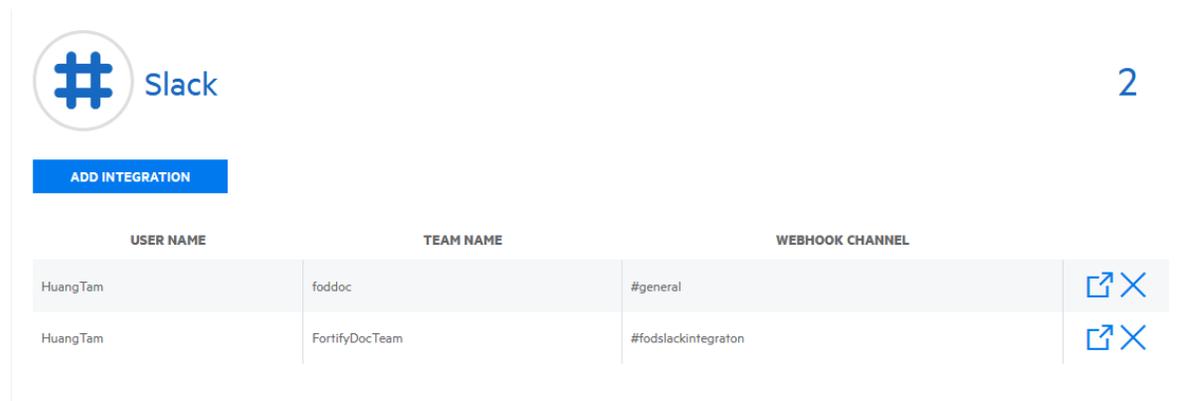

1. Select the **Administration** view.
The **User Management** page appears.

2. Click **Integrations**.

The **Integrations** page appears.

3. Expand the **Slack** section.

4. Perform the following tasks depending on your preferences and user permissions:

- To remove authorizations in Slack:

- i. Click  in the row of the webhook.

You are redirected to the Fortify on Demand page in your workspace app directory.

Note: You can also access the page from the Slack workspace.

- ii. Remove specific authorizations or remove the application to remove all authorizations. For more information about removing applications from Slack, see the [Remove apps and custom integrations from your workspace](#) section of the Slack documentation.

- To remove a webhook in Fortify on Demand:

- i. Click  in the row of the webhook.

The webhook is deleted.

Source Control Integration

Important! Source control integration through the portal is a legacy integration. This feature is planned to be deprecated. Existing users should migrate source control integrations to pipelines on the applicable version control platforms at the earliest convenience. Fortify offers pipeline templates for various version control platforms, including Bitbucket, GitHub, and GitLab. For more information, see ["CI/CD Tools" on page 337](#).

Fortify on Demand offers source control integration through the portal for GitHub and Bitbucket. This enables Fortify on Demand to pull source code from repositories on those platforms for static assessments.

The following languages are supported: Java, JavaScript, .NET, PHP, and Python. The requirements for preparing your code for upload to Fortify on Demand remain the same as described in ["Preparing Static Assessment Files" on page 91](#). For .NET and Java, Fortify recommends pre-compiling your files and uploading them to a release to ensure acceptance of the payload.

Source control integration is configured at the application level. Once it is configured, users can select a branch or release to upload when starting a static assessment.

This section contains the following topics:

Configuring Source Control Integration with Bitbucket	365
Configuring Source Control Integration with GitHub	366

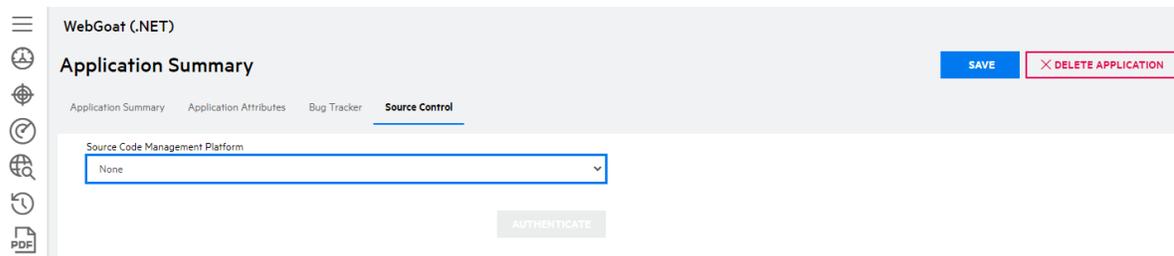

Configuring Source Control Integration with Bitbucket

Important! Source control integration through the portal is a legacy integration. This feature is planned to be deprecated. Existing users should migrate source control integrations to pipelines on the applicable version control platforms at the earliest convenience. Fortify offers pipeline templates for various version control platforms, including Bitbucket, GitHub, and GitLab. For more information, see ["CI/CD Tools" on page 337](#).

The Bitbucket integration requires the addition of an OAuth consumer in Bitbucket.

To configure source control integration with Bitbucket:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application that you want to edit.
3. Click **Settings**.
The Application Summary page appears.
4. Select the **Source Control** tab.

5. Select **Bitbucket** from the **Source Code Management Platform** list.
6. In the **Client Key** and **Client Secret** fields, type the OAuth consumer key and secret as generated in Bitbucket.

To generate the key and secret, add an OAuth consumer in Bitbucket. When configuring the consumer, make sure to do the following:

- Set the callback URL to `https://<fod_domain>/Redirect/OAuth/`, where `<fod_domain>` is the Fortify on Demand domain and scheme.
 - US: `ams.fortify.com`
 - EMEA: `emea.fortify.com`
 - APAC: `apac.fortify.com`
 - FedRAMP: `fed.fortifygov.com`
- Assign read permission to the account, workspace membership, projects, and repositories.

For more information on adding an OAuth consumer in Bitbucket, see the [Integrate another application through OAuth](#) section of the Bitbucket documentation.

Tip: Make sure that the **This is a private consumer** check box is selected in your workspace OAuth consumer settings.

7. Click **Authenticate**.

If the authentication was successful, you are redirected to the Bitbucket site.
8. Authorize the Fortify on Demand application to access your account.

The **Team** and **Repository** fields are populated. The **Team** field lists your user account and all teams whose repositories you have access to.
9. Select the team that owns the repository that will be linked to the application from the **Team** list.
10. Select the repository from the **Repository** list.
11. Click **Save**.

Your source control integration settings are saved.

Configuring Source Control Integration with GitHub

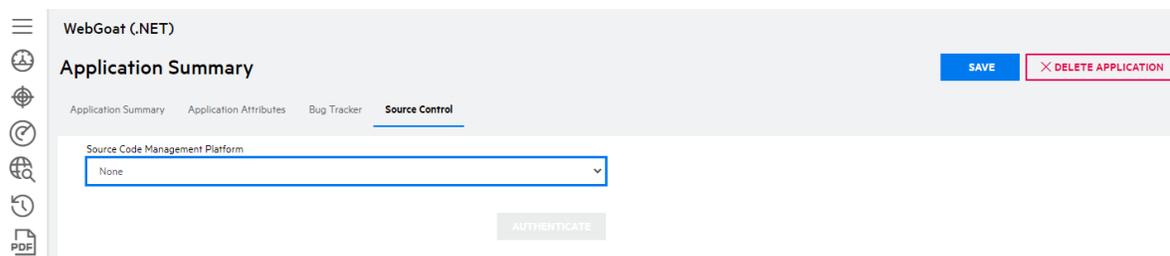

Important! Source control integration through the portal is a legacy integration. This feature is planned to be deprecated. Existing users should migrate source control integrations to pipelines on the applicable version control platforms at the earliest convenience. Fortify offers pipeline templates for various version control platforms, including Bitbucket, GitHub, and GitLab. For

more information, see ["CICD Tools" on page 337](#).

The GitHub integration uses the Fortify on Demand Github marketplace application, which is unique to each data center. Source control integration with GitHub Enterprise is not available.

To configure source control integration with GitHub:

1. Select the **Applications** view.
Your Applications page appears.
2. Click the name of the application that you want to edit.
3. Click **Settings**.
The Application Summary page appears.
4. Select the **Source Control** tab.

5. Select **Github** from the **Source Code Management Platform** list.
6. Click **Authenticate**.
If the authentication was successful, you are redirected to the GitHub site.
7. Authorize the Fortify on Demand application to access your account.
The **Organization** and **Repository** fields are populated. The **Organization** field lists your user account and all organizations whose repositories you have access to.
8. Select the organization that owns the repository that will be linked to the application from the **Organization** list.
9. Select the repository from the **Repository** list.
10. Click **Save**.
Your source control integration settings are saved.

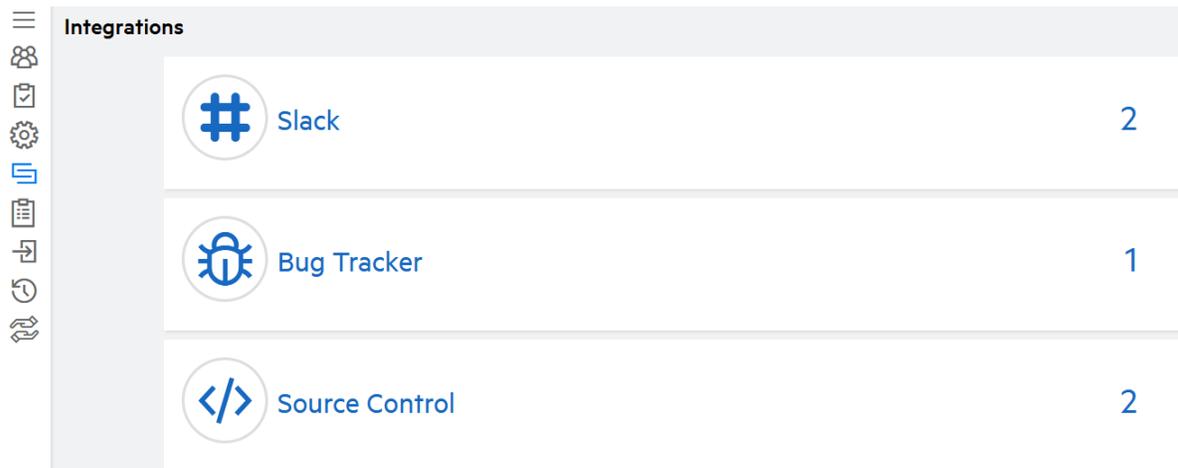

Tracking Configured Integrations

Security Leads can track user-configured integrations with external tools across all applications in Fortify on Demand. Currently, the integrations available for tracking are: bug tracker, source control, and Slack.

To track user-configured integrations across the tenant:

1. Select the **Administration** view.
The **User Management** page appears.
2. Click **Integrations**.

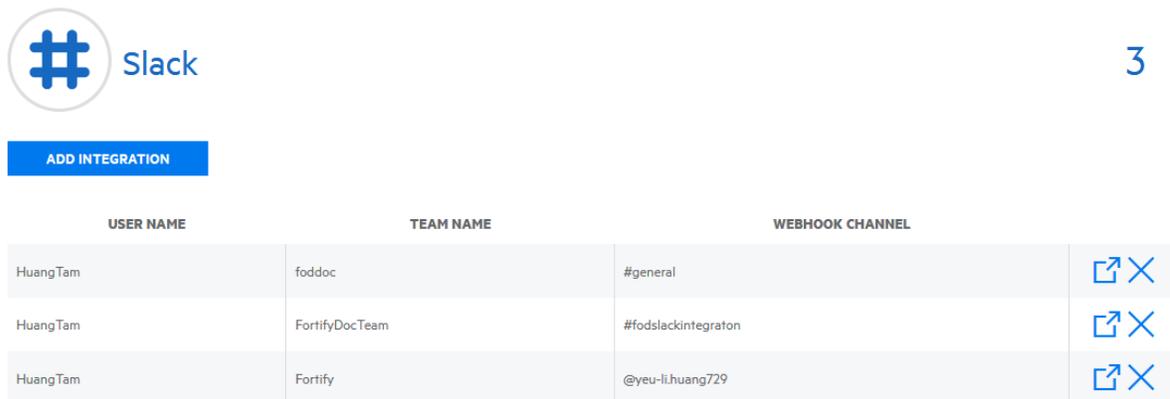

The **Integrations** page appears.

The screenshot shows the 'Integrations' page. On the left is a sidebar with icons for home, integrations, settings, and other tools. The main content area is titled 'Integrations' and contains three cards:

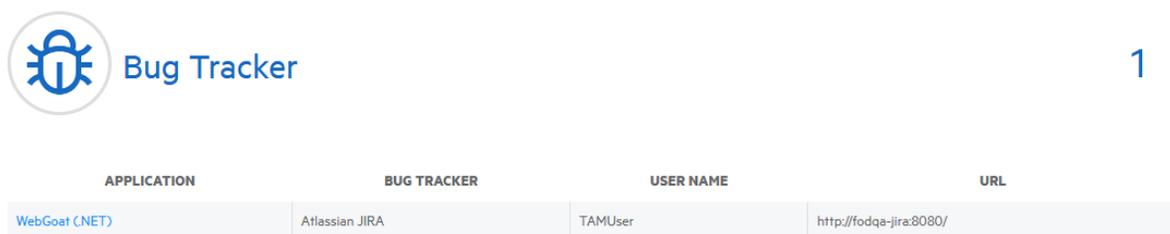

- Slack**: Represented by a blue hashtag icon, with a count of 2.
- Bug Tracker**: Represented by a blue bug icon, with a count of 1.
- Source Control**: Represented by a blue code icon, with a count of 2.

3. Expand the sections that you want to view.

The expanded Slack section includes an 'ADD INTEGRATION' button and a table of existing integrations:

USER NAME	TEAM NAME	WEBHOOK CHANNEL	
HuangTam	foddoc	#general	 
HuangTam	FortifyDocTeam	#fodslackintegraton	 
HuangTam	Fortify	@yeu-li.huang729	 

The expanded Bug Tracker section shows a table with the following data:

APPLICATION	BUG TRACKER	USER NAME	URL
WebGoat (.NET)	Atlassian JIRA	TAMUser	http://fodqa-jira:8080/

The expanded Source Control section shows a table with the following data:

APPLICATION	MANAGEMENT PLATFORM
Test Web App	GitHub
WebGoat (.NET)	GitHub

4. You can perform the following actions:

- Slack: Click the links in the row of a webhook to remove specific authorizations or delete the webhook. For more information, see "[Deleting Slack Integration](#)" on page 363.
- Bug Tracker: Click the link in an application row to be redirected to the application's bug tracker settings. For more information, see "[Bug Tracker Integration](#)" on page 348.
- Source Control: Click the link in an application row to be redirected to the application's source control settings. For more information, see "[Source Control Integration](#)" on page 365

Webhooks

Webhooks provide a way for notifications to be delivered to an external web server when scans are updated in Fortify on Demand. Users with the **Configure Webhooks** permission can configure webhooks to trigger when a subscribed event occurs. The following events are available: scan start, scan pause, scan resumption, scan cancellation, and scan completion. When an event to which a webhook is subscribed occurs, Fortify on Demand sends an HTTP POST payload to the webhook's configured URL. Webhooks can be used in place of polling in CICD pipelines that incorporate scanning.

This section contain the following topics:

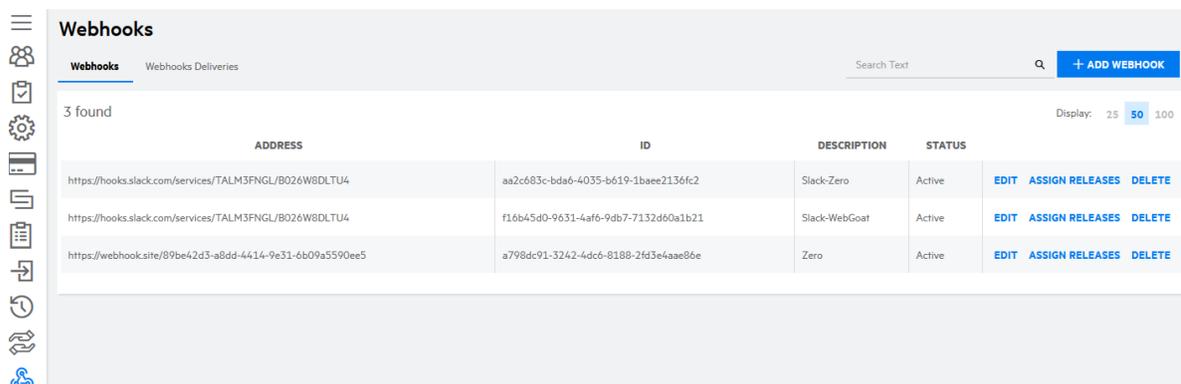

Configuring a Webhook	369
Webhook Requests and Responses	372
Viewing Webhook Deliveries	373

Configuring a Webhook

Users with the **Configure Webhooks** permission can configure webhooks for the tenant. A webhook must be assigned to a minimum of one release.

To configure a webhook:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Webhooks**.
The Webhooks page appears.

3. Click **Add Webhooks**.

The Add/Edit Webhooks window appears.

4. Complete the fields as needed. Fields are required, unless otherwise noted.

Field	Description
Payload URL	Type the URL of the server that will receive the webhook POST requests. For example, <code>https://7e9ea9dc.ngrok.io/payload</code> .
Description	(Optional) Type a phrase that describes the webhook.
Secret	(Optional) Type a secret that can be used to validate that webhook requests sent to the payload URL are from Fortify on Demand. The HMAC-SHA256 algorithm is used in combination with the secret to calculate a hash of the payload body. The output is the HMAC and is included in the header of a request as X-FOD-Signature. <div style="background-color: #f0f0f0; padding: 5px;">Tip: To validate the webhook request, calculate the HMAC by hashing the raw payload body using the HMAC-SHA256 algorithm in combination with the secret, then hex-encoding the hash. Verify that the output matches the value of X-FOD-Signature.</div>
Monitor all application releases	<ul style="list-style-type: none"> Set to Yes to monitor all application releases. Set to No to monitor individual releases (default). You can specify releases to monitor after the webhook has been configured.

Field	Description
Active	<ul style="list-style-type: none"> Set to Yes to enable the delivery of webhook requests (default). Set to No to disable the delivery of webhook requests.

- Select which scan events will trigger the webhook.
- Click **Test Webhook** to ping the payload URL.
A "Successfully sent a ping event" message appears if the webhook was configured correctly.
- Click **Save**.

The new webhook appears in the list of webhooks.

Note: You can search webhooks by address, description and full ID. Partial string match is supported for address and description.

- If you chose to monitor individual releases, click **Edit** in the row of the webhook.
The Assign Releases window appears.

- Select the releases that the webhook will monitor and click **Save**.
The webhook is now assigned to the selected releases.

Webhook Requests and Responses

Fortify on Demand sends information about webhook events as HTTP POST requests with the JSON payload as the body of the request.

Note: SSL verification is enabled by default. If the payload Url is HTTPS, Fortify on Demand will verify SSL certificates when sending webhook requests.

Request Example

The following example shows a request with a hash signature in the header as X-FOD-Signature and the JSON payload.

Header:

```
connection: close
expect: 100-continue
content-length: 324
host: webhook.site
content-type: application/json; charset=utf-8
x-fod-signature:
4F837B0AE04303E975BBBCF9FFBBC09E0016013835757BD611C20F7930711980F
x-fod-deliveryid: f8d97b5e-4cae-414b-aa84-8de766f8116f
```

Payload:

```
{
  "deliveryId": "f8d97b5e-4cae-414b-aa84-8de766f8116f",
  "eventName": "scan_started",
  "payload": {
    "scanId": 31278,
    "tenantId": 1126,
    "applicationId": 14155,
    "applicationName": "Zero",
    "releaseId": 16149,
    "releaseName": "v1",
    "scanType": "dynamic"
  },
  "webhookId": "a798dc91-3242-4dc6-8188-2fd3e4aae86e",
  "triggeredAt": "2021-07-02T16:08:28.5496187Z"
}
```

Response Example:

The following example shows the response received by Fortify on Demand.

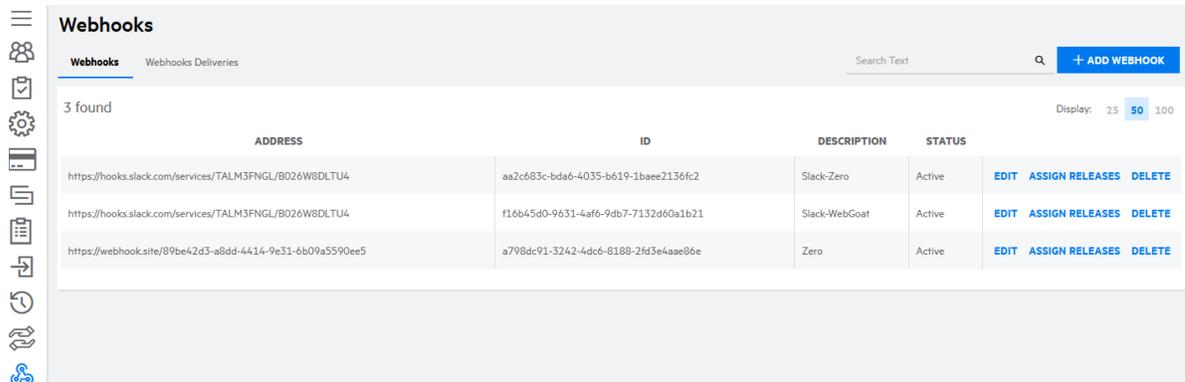

```
Transfer-Encoding = chunked
Vary = Accept-Encoding
X-Request-Id = e9cbce0c-108f-46e9-b2cc-89f6f0104dca

Server = nginx/1.14.2
```

Viewing Webhook Deliveries

Users with the **Configure Webhooks** permission can view details of the webhook deliveries, including the HTTP request (including the payload) and the response.

To view the list of webhook deliveries:

1. Select the **Administration** view.
The User Management page appears.
2. Click **Webhooks**.
The Webhooks page appears.

The screenshot shows the 'Webhooks' page in an application. The page title is 'Webhooks' and the subtitle is 'Webhooks Deliveries'. There is a search bar with the text 'Search Text' and a '+ ADD WEBHOOK' button. Below the search bar, it says '3 found' and 'Display: 25 50 100'. The main content is a table with three columns: 'ADDRESS', 'ID', and 'DESCRIPTION', and a 'STATUS' column. Each row has three columns and a 'STATUS' column. The first row has 'ADDRESS' 'https://hooks.slack.com/services/TALM3FNGL/B026WBDLTU4', 'ID' 'aa2c683c-bda6-4035-b619-1baee2136fc2', 'DESCRIPTION' 'Slack-Zero', and 'STATUS' 'Active'. The second row has 'ADDRESS' 'https://hooks.slack.com/services/TALM3FNGL/B026WBDLTU4', 'ID' 'f16b45d0-9631-4af6-9db7-7132d60a1b21', 'DESCRIPTION' 'Slack-WebGoat', and 'STATUS' 'Active'. The third row has 'ADDRESS' 'https://webhook.site/89be42d3-a8dd-4414-9e31-6b09a5590ee5', 'ID' 'a798dc91-3242-4dc6-8188-2fd3e4aae86e', 'DESCRIPTION' 'Zero', and 'STATUS' 'Active'. Each row has three buttons: 'EDIT', 'ASSIGN RELEASES', and 'DELETE'.

ADDRESS	ID	DESCRIPTION	STATUS
https://hooks.slack.com/services/TALM3FNGL/B026WBDLTU4	aa2c683c-bda6-4035-b619-1baee2136fc2	Slack-Zero	Active
https://hooks.slack.com/services/TALM3FNGL/B026WBDLTU4	f16b45d0-9631-4af6-9db7-7132d60a1b21	Slack-WebGoat	Active
https://webhook.site/89be42d3-a8dd-4414-9e31-6b09a5590ee5	a798dc91-3242-4dc6-8188-2fd3e4aae86e	Zero	Active

3. Select the **Webhook Deliveries** tab.
A list of webhook deliveries appear.

STATUS	DELIVERED DATE	ADDRESS	DELIVERY ID	
✓	6/30/2021 11:31:12 PM	https://webhook.site/89be42d3-a8dd-4414-9e31-6b09a5590ee5	bd011784-8dff-4347-a4c5-a5954b94f062	DETAILS

Training Courses

Fortify on Demand has partnered with Security Innovation to provide secure development training courses . Review your contract to verify if they are included. If you are interested in adding courses, contact your sales representative.

This feature requires pop-ups and cookies to be enabled for the portal.

Viewing Training Courses

To view your assigned training courses:

1. Click the icon on the portal toolbar.

The Training page appears. The Courses tab displays the list of your assigned courses with the following information: course name, parent curriculum, module ID, course completion status, last attempted date, passed date, and course link.

Training							
						Search Text	Q
Courses Report Assignment							
COURSE NAME	CURRICULUM	MODULE ID	STATUS	LAST ATTEMPTED DATE	PASSED DATE		
AWA 101 - Fundamentals of Application Security	Fundamental	12	Incomplete	2019/02/26	2018/05/17	Start Course	Resume Course
COD 101 - Fundamentals of Secure Development	Fundamental	13	Browsed	2019/02/16	2019/02/16		
COD 153 - Fundamentals of Secure AJAX Code	Fundamental	11				Start Course	
IC	Miscellaneous	2	Incomplete	2019/02/16		Start Course	Resume Course

2. Perform one of the following actions:

- Click the **Start Course** link in the row of a course to start the course.

Starting a course will reset the completion status but not the passed date. Close the course window when you are done to ensure results are properly recorded.

- Click the **Resume Course** link in the row of a course to continue from where you left off.
- Click the **Browse Course** link in the row of a course to view the contents without affecting the completion status or the passed date.

A confirmation message appears.

3. Click **Yes**.

The course appears in a new window.

Assigning Training Courses

You can assign training courses available to your tenant to yourself. In addition, users with the **Manage Users** permissions can assign training courses to all active users in the tenant. Courses are grouped into different types of curricula and are assigned as a curriculum.

To assign training courses to yourself or another user:

1. Click the  icon on the portal toolbar.
The Training page appears.
2. Select the **Assignment** tab.

Training							
						Search Text	Q
Courses Report Assignment							
USER NAME	FIRST NAME	LAST NAME	EMAIL	ROLE	COURSE CURRICULUM		
AndyTest	Andrew	Schmit	andrew.schmit@hpe.com	Security Lead	Creating Secure Code, Miscellaneous		
dwayneAppLead	Dwayne	Whiteside	Dwayne.Whiteside@hpe.com	Application Lead	Creating Secure Code, Miscellaneous		
DwayneDev	Dwayne	Whiteside	Dwayne.whiteside1@hpe.com	Developer	Creating Secure Code, Fundamental		
DwayneExec	Dwayne	Whiteside	dwayne.whiteside2@hpe.com	Executive			
DwayneLeadDev	Dwayne	Whiteside	dwayne.whiteside3@hpe.com	Lead Developer			
DwaynePWtest	Dwayne	Whiteside	dwayne.whiteside@hpe.com	Developer	Miscellaneous		
dwayneRev	Dwayne	Whiteside	Dwayne.Whiteside5@hp.com	Reviewer			
DwayneSecLead	Dwayne	Whiteside	DWhiteside@hp.com	Security Lead	Fundamental		
tcappetto_dev	Tim	Cappetto	tcappetto@hpe.com	Developer	Creating Secure Code		
tcappetto_seclead	Tim	Cappetto	cappetto2@hpe.com	Security Lead			

If your role has the **Manage Users** permission, the list of active users and their assigned curricula in the tenant appears. Otherwise, you only see your user account and assigned curricula.

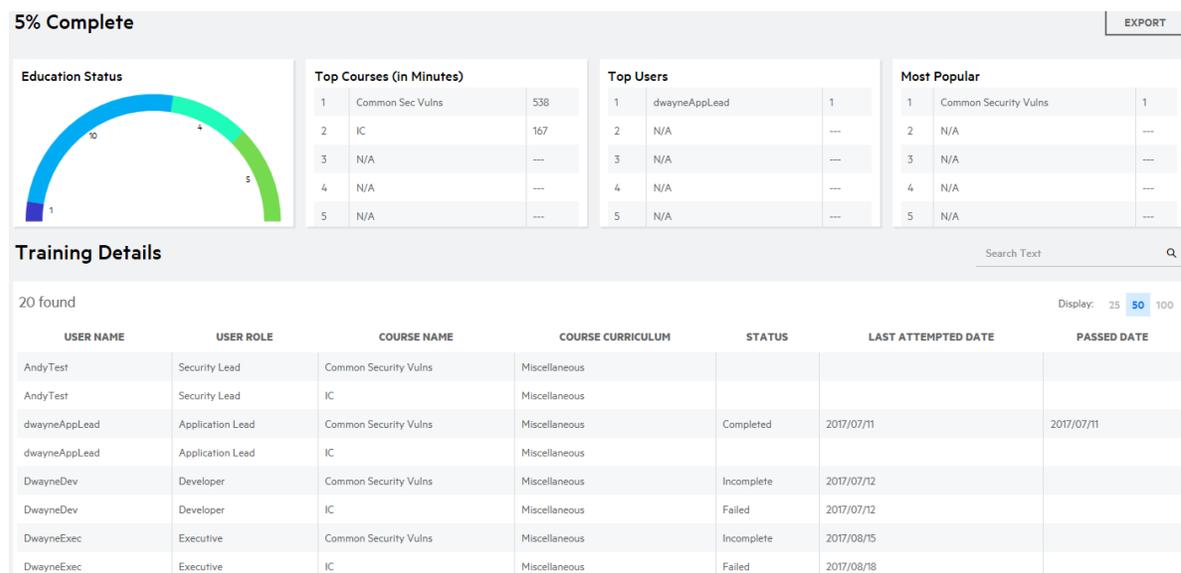

- Click  next to a user.
The Course Curriculum modal window appears.
- Select the check boxes next to the curricula that you want to assign to the user.
Click **Save**.
The **Assignment** tab displays the saved changes.

Viewing the Training Report

Users with the **Manage Users** permission can track user progress in assigned training courses across the tenant by viewing the training progress report. The report provides a tenant-level summary of user activity and a list of course completion statuses per user.

To view the training report:

- Click the  icon on the portal toolbar.
The Training page appears.
- Select the **Report** tab.

The tab displays the following information:

- The percentage of assigned courses that were completed
- Charts summarizing user progress and trends:
 - Education Status:** the number of courses that are completed, in progress, or have not been started
 - Top Courses:** the most active courses in terms of minutes spent

- **Top Users:** the most active users in terms of courses taken
 - **Most Popular:** the courses that have been taken the most
 - The **Training Details** grid displaying in each row the tenant user, the assigned course, the course progress status, the last course access date, and the last course completion date.
3. Click **Export** to export the **Training Details** grid as a CSV file. Search results are applied to the export.

Chapter 10: Policies and Support

For more information on Fortify on Demand, review the Fortify on Demand policies and support resources.

This section contains the following topics:

- [Maintenance Schedule and Software Updates](#)379
- [Data Retention Policy](#)380
- [Getting Support](#)381

Maintenance Schedule and Software Updates

Fortify on Demand provides the following information regarding maintenance schedule and software updates.

Maintenance Schedule

To help customers plan for scheduled maintenance, Fortify on Demand reserves predefined time frames to be used on an as-needed basis: a weekly two (2) hour window (Thursday 00:00 to 02:00) and one (1) monthly forty-eight (48) hour window (Saturday 00:00 to Sunday 00:00). These maintenance windows will be used on an as-needed basis and in the vast majority of instances will have no impact on users' ability to access or leverage functionality in Fortify on Demand.

The maintenance window for each data center is set using the following time zones:

Data Center	Maintenance Time Zone
AMS	US Eastern Time
EMEA	Greenwich Mean Time
APAC	Australian Eastern Time

For additional details about scheduled maintenance in other environments, contact support.

Software Updates

Fortify on Demand determines whether and when to develop, release, and apply software upgrades to the Fortify on Demand platform and/or supporting components. Major releases are typically made available on a quarterly basis, with minor releases and patches made available on an as-needed basis. Unless Fortify on Demand anticipates a service interruption due to a software upgrade, Fortify on

Demand may implement a SaaS upgrade at any time without notice to the customer. Fortify on Demand aims to use the monthly scheduled maintenance window to apply major software updates.

Security content updates to expand and improve Fortify on Demand's ability to identify vulnerabilities are a key component of the Fortify on Demand service. Security content updates are developed by the Fortify Software Security Research (SSR) team and are typically released at the end of each calendar quarter. Fortify on Demand typically deploys updated security content within several weeks of public availability. Security content updates may be deployed outside of the quarterly updates in response to significant new threats or zero-day vulnerabilities. Fortify recommends Fortify users to stay up-to-date with the latest security intelligence by following the OpenText Security Research blog at <https://community.microfocus.com/cyberres/b/off-by-on-software-security-blog>.

Data Retention Policy

Fortify on Demand has implemented the following data retention policy for customers as of the v18.4 release. Fortify on Demand encourages customers to review and download any files outside the data retention windows that they wish to retain.

Resource	File Type	Retention Period
Data exports (Application and Release Issues pages)	.csv	7 days
Source code	.zip	15 days
Mobile application binaries	.ipa, .apk	30 days
Notifications	-	3 months
Data exports (global Reports page)	.csv	3 months
Event log	.csv	13 months
User-generated reports	.pdf, .html	2 years
Fortify scan result files	.fpr	2 years
Software bill of materials (SBOM)	.json	2 years
Site trees	.csv	2 years
Application data	-	Customer controlled*
Release data	-	Customer controlled*
Issue data	-	Customer controlled*
User data	-	Customer controlled*

*The customer is responsible for creation and deletion of the specified data as long as the customer maintains an active status with Fortify on Demand. The customer can delete an application, release, or user at any time. Issue data associated with an application or release is also deleted. Upon termination of the Fortify on Demand service, the termination data retrieval period is 30 days.

For more information, please contact support.

Getting Support

Fortify on Demand offers support through self-service resources and the Fortify on Demand Help Center, staffed 24/7 by a dedicated support team of TAMs. The self-service resources include video demonstrations, a knowledge base, and product documentation. If you did not find what you were looking for, start a live chat with support or submit a support ticket in the Help Center. You can call support at 800.893.8141 or 650.800.3233 if internet access is unavailable.

This section contains the following topics:

Accessing Support Resources

Support resources are available through the portal. The portal contains direct links to how-to videos, online help, live chat, and the Help Center. The Help Center is Fortify on Demand's support ticket system. It also hosts PDF versions of the User Guide and Release Notes and the knowledge base.

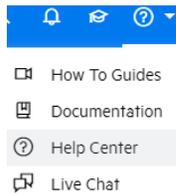

Note: You can directly log in to the Help Center through the relevant URL using your Fortify on Demand credentials:

- AMS: <https://helpcenter.ams.fortify.com>
- EMEA: <https://helpcenter.emea.fortify.com>
- APAC: <https://helpcenter.apac.fortify.com>
- SGP: <https://fodsgp.zendesk.com/>

To access support resources:

1. Click the help menu and select one of the following:
 - **How To Guides** - opens [Fortify on Demand how-to video guides](#), part of the Fortify Digital Learning offerings.
 - **Documentation** - opens the online help
 - **Help Center** - opens the Help Center
 - **Live Chat** - opens the Live Chat window where you can chat with Fortify on Demand support

24/7

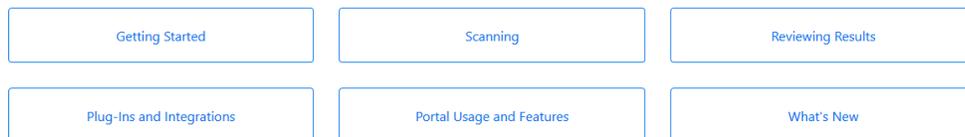

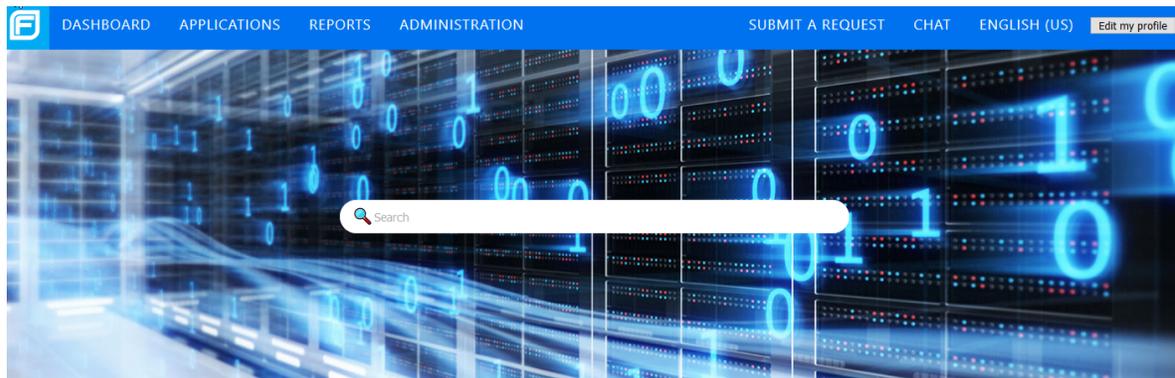

Submitting a Help Center Ticket

Submit a support ticket in the Help Center.

To submit a Help Center ticket:

1. Click the help menu and select **Help Center**.

The Help Center opens in a new window.

2. Click **Submit a Ticket**.
The **Submit A Request** form appears.
3. Select the ticket type from the drop-down list:
 - **Create Ticket** - get help with a general product question or a tenant-specific issue
 - **FoD Defect Submission** - report a Fortify on Demand bug or issue
 - **FoD Enhancement Submission** - request an enhancement
4. Complete the fields displayed for the selected ticket type. Provide as many details as possible.
5. Click **Submit**.
A message at the top of the page indicates that your Help Center ticket was submitted.

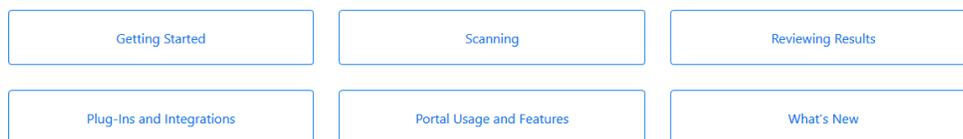

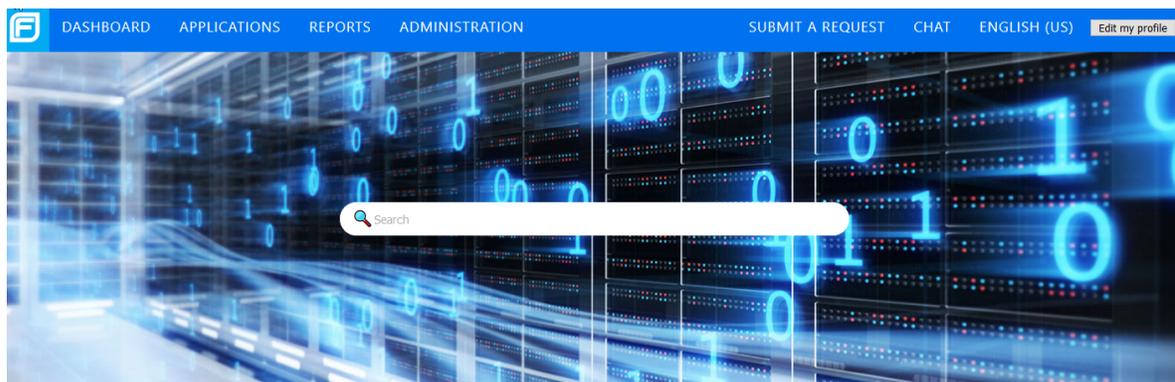

Tracking your Help Center Tickets

You can track support tickets submitted for your tenant in the Help Center. You can only view tickets that you have submitted, are assigned to, and are copied on (if you are on an application's notification list you are automatically added to tickets linked with the application).

To track your Help Center tickets:

1. Click the help menu and select **Help Center**.

You are redirected to the Help Center.

2. Click **View Tickets**.

Your tickets are displayed. Tickets have one of the following statuses:

- **Open** - Your request has been received and assigned to support who is working to resolve it.
- **Awaiting your reply** - The assigned support has a follow-up question for you. Tickets that are set to Pending typically remain that way until you respond and provide the information support needs to continue resolving the issue.
- **Solved** - Support has resolved the issue. Solved tickets are closed automatically seven days after they have been set to Solved. Until a ticket is closed, you can reopen the ticket.
- **Closed** - The ticket is complete and can't be reopened. If you need additional support for the original ticket, create a follow-up request.

3. To limit the number of tickets you view, filter your list with the **Status** filters:

- **Any** - Show all tickets.
- **Open** - Show tickets that the Fortify on Demand team is still working on.
- **Awaiting your reply** - Show tickets that require action from your organization.
- **Solved** - Show tickets that have been resolved.

Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email.

Note: If you are experiencing a technical issue with our product, do not email the documentation team. Instead, contact Customer Support at <https://www.microfocus.com/support> so they can assist you.

If an email client is configured on this computer, click the link above to contact the documentation team and an email window opens with the following information in the subject line:

Feedback on User Guide (Fortify on Demand 24.3)

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to mfi-fortifydocteam@opentext.com.

We appreciate your feedback!
