OpenText™ Core Application Security Plugin for IntelliJ IDEA
Version 25.2

Release Notes
Document Release Date: May 2025
Software Release Date: May 2025

This document provides an overview of OpenText™ Core Application Security Plugin for IntelliJ IDEA 25.2, including new features, delivery information, and supported platforms.

OpenText recommends that you read Release Notes in conjunction with the documentation included with the software package.

We also recommend that you check [Product Documentation](#) for documentation updates that may have been posted after the initial release of this product.

New in this Release

The following are the new features in OpenText™ Core Application Security Plugin for IntelliJ IDEA version 25.2.

- You can use Open Source scans to upload Debricked open source scans to Core Application Security.
- When you use Static scans, you can choose to fall back to the next active entitlement once the current entitlement subscription ends.
- For scans using Automated audit, you can use SAST Aviator to audit results and provide enhanced remediation assistance.
- UI improvements and enhancements.

The OpenText™ Core Application Security Plugin for IntelliJ IDEA is available from the IntelliJ IDEA marketplace: https://plugins.jetbrains.com/plugin/core-application-security

KNOWN ISSUES

The following are known problems and limitations in OpenText™ Core Application Security Plugin for IntelliJ IDEA version 25.2.

- Fortify ScanCentral SAST client fails to package projects when the path contains spaces.

  WORKAROUND: Ensure that the path to the project does not include spaces.

Documentation

The documentation is available from the following OpenText Product Documentation website: https://www.microfocus.com/documentation/fortify-on-demand.
