Identity Intelligence 24.1.0 Release Notes

January 2024

Identity Intelligence provides interactive dashboards and reporting capabilities for identity governance data. It provides the details in the form of dashboards and reports to monitor and analyze. Also, it provides the monthly active user information for the available applications.

Identity Intelligence is an analytics solution. The analytics repository in the Identity Intelligence stores and processes the governance data. This processed data is represented in the dashboards to monitor and analyze the governance activities. The reporting capability of the product enables running reports and allows sharing of the information with the stakeholders.

The documentation for this product is available on the documentation website in HTML and PDF formats. For more information about this release and the latest release notes, see the Documentation page see Identity Intelligence Documentation. If you have suggestions for documentation improvements, click **comment on this topic** at the bottom of any page in the HTML version of the documentation page.

What's New?

This release includes the following new features and enhancements:

- "Managing Access Control Using Permissions Delta by User Report" on page 1
- "Accounts Relationship with Categories Modular Dashboard" on page 2
- "Active User Reports to Track User Engagement" on page 2
- "Accounts by Review Status Widget" on page 2

Managing Access Control Using Permissions Delta by User Report

Permissions Delta by user report enables you to view the changes in permissions for a selected user in a selected date range. The report displays the following permission details:

- Initial Permissions
- Changes in Permissions within the Environment
- User Assigned Permissions
- Final Permissions

For more information, see Understanding Predefined Reports.

Accounts Relationship with Categories Modular Dashboard

This reusable modular dashboard enables you to view the account to user relation and the account mapping status. The widget displays if one or more users are mapped to a single or multiple accounts and if the account is shared among multiple users.

For more information, see Accounts Relationship with Categories.

Active User Reports to Track User Engagement

Active user reports enable to retrieve the user and application information in a specific period. The following are the active user reports:

- Monthly Active Users report enables to view the active user interactions with the application on monthly basis. Each user interaction is counted for the events that took place within the application. For instance, when the user logs in, creates a request, or is assigned with a permission.
- Service Activity Information report gives the count of users per application per month.

For more information, see Understanding Active User Reports.

Accounts by Review Status Widget

This widget enables you to view the accounts that are mapped to none of the account categories such as admin and system. It helps in identifying the accounts that are unmapped and not reviewed for a specific period.

Known Issues

Identity Intelligence includes the following known issues:

Labels are Displayed Upside Down in the Accounts Relationship with Category Widget

Issue: A few labels are displayed upside down in the Accounts Relationship with Category widget.

Workaround: None.

'Preparing Report' Spinner Gets Displayed while Switching from One Report to Another Report

Issue: When you click a report and try clicking another one while the previous report is still loading, there is a delay in loading the report.

Workaround: Refresh the page.

Add to Queue Option is not Displayed in the Report Loading Page

Issue:

The **Add to Queue** option enables to add a report to the queue and view the results later for the long running report. The option is not displayed currently due to technical limitation.

Workaround: None.
