Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit <https://www.microfocus.com/support-and-services/documentation/>.

Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

New in this Release	4
Resolved Issues	5
Documentation	6

New in this Release

The following new features were released in NiFi Ingest version 12.10.0.

- The advanced configuration dialog for an IDOL NiFi Ingest Connector can display the statistics collected by the connector. The statistics that are available depend on the connector you are using, but all connectors provide information about the number and frequency of ingest-adds, ingest-updates, and ingest-deletes.
- IDOL NiFi Ingest Connectors can generate reports of errors. When you set a new advanced property named `adv:EnableReport` to `TRUE`, a new output relationship named `report` is enabled. A connector can send FlowFiles, each reporting a single error, to this relationship.

Resolved Issues

The following issues were resolved in NiFi Ingest version 12.10.0.

- NiFi could terminate unexpectedly when the DetectContentLanguage processor was configured to use multiple threads (by setting **Concurrent Tasks** on the **Scheduling** tab to a value greater than 1).
- The RegisterDocument processor did not work when configured to use a MySQL database.

Documentation

The following documentation was updated for NiFi Ingest version 12.10.0.

- *NiFi Ingest Online Help*
