## New in this Release

The following new features were released in Answer Server version 12.3.0.

- Communications can be secured with TLS version 1.3.
- When a context is provided with an Ask action, the context information in the answer response object is now presented in the same way regardless of answer system. The response contains a <context> tag with a "token" attribute. The token can be used to update the ask context via ManageResources. Tokens remain valid until the next ask action using that context ID.

## Conversation Systems

- The Conversation module now automatically indexes the basic dummy document to the Agentstore component if you use agent-based triggers.

## Resolved Issues

There were no resolved issues in Answer Server version 12.3.0.
