

# SharePoint OData Connector

Software Version 12.4.0

## Release Notes

Document Release Date: October 2019  
Software Release Date: October 2019

## Legal notices

### Copyright notice

© Copyright 2019 Micro Focus or one of its affiliates.

The only warranties for products and services of Micro Focus and its affiliates and licensors (“Micro Focus”) are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. Micro Focus shall not be liable for technical or editorial errors or omissions contained herein. The information contained herein is subject to change without notice.

## Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit <https://www.microfocus.com/support-and-services/documentation/>.

## Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

## New in this Release

The following new features were released in SharePoint OData Connector version 12.4.0.

- The NiFi Ingest connector includes a processor to perform the view action (`ViewSharePointOData`).
- When mapped security is enabled, the connector adds Access Control Lists (ACLs) to each document to describe browse and write permissions. Browse permission means that a user or group can see that a document exists in a repository. Write permission means that a user or group can modify the document. The new ACLs are added in metadata fields named `AUTONOMYMETADATA_BROWSE` and `AUTONOMYMETADATA_WRITE`, and complement the existing ACL in the `AUTONOMYMETADATA` field that describes read permissions.
- The `identifiers` fetch action has a new parameter, `ShowExcluded`. If you set this parameter to `TRUE`, the connector returns identifiers for excluded items (items that would not be synchronized because they are excluded by the task configuration).
- In schedules defined with the `schedule` action, you can now add holiday periods during which no actions are started.

## Resolved Issues

The following issues were resolved in SharePoint OData Connector version 12.4.0.

- Schedules created with `action=Schedule` were lost if the server was restarted.
- On Linux, when running some older versions of the Linux kernel, IDOL components could fail to connect to network ports.

# Supported Operating System Platforms

SharePoint OData Connector 12.4.0 is supported on the following platforms.

## **Windows (x86-64)**

- Windows Server 2019
- Windows Server 2016
- Windows Server 2012
- Windows 7 SP1
- Windows Server 2008 R2
- Windows Server 2008 SP2

## **Linux (x86-64)**

The minimum supported versions of particular distributions are:

- Red Hat Enterprise Linux (RHEL) 6
- CentOS 6
- SuSE Linux Enterprise Server (SLES) 12
- Ubuntu 14.04
- Debian 8

## **Solaris (x86-64 and SPARC 64)**

- Solaris 11
- Solaris 10

## Notes

This section contains information that is important if you are upgrading from an earlier version of SharePoint OData Connector.

- The response to the identifiers fetch action has changed. The identifier types `ListAllItems` and `ListRootFolder` (which did not represent items in SharePoint) have been removed.
- The connector automatically sets the `SECURITYTYPE` metadata field to `SHAREPOINT`.

# Documentation

The following documentation was updated for SharePoint OData Connector version 12.4.0.

- *SharePoint OData Connector Administration Guide*
- *SharePoint OData Connector Reference*
