Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for updated documentation, visit <https://www.microfocus.com/support-and-services/documentation/>.

Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in. If you need an account, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

Documentation	7

New in this Release

The following new features were released in Query Manipulation Server version 12.6.0.

- You can now use explicit profile information for a user to activate particular QMS rules. The explicit profile information is stored in the IDOL Community Component. To activate explicit profiling, you use the new `ExplicitProfiling` parameter in your Query action, along with the `Username` parameter to specify the user.

For more information about explicit profiling, refer to the *QMS Administration Guide* and the *QMS Reference*.

IMPORTANT: As part of this change, all rules now require the `QMSAGENTBOOL` parameter. Whitelist and blacklist rules did not previously require this parameter.

When you upgrade to QMS version 12.6.0, you must add the `QMSAGENTBOOL` parameter to your whitelist and blacklist rules, and set it and the `DRECONTENT` field to the title of the rule. For more information, refer to the *QMS Administration Guide* section about creating blacklist and whitelist rules.

Resolved Issues

There were no resolved issues in Query Manipulation Server version 12.6.0.

Notes

These notes provide extra information about installing and using Query Manipulation Server.

- ACI Encryption has been deprecated. Instead of using ACI encryption, Micro Focus recommends configuring Secure Socket Layer (SSL) connections between ACI servers and applications.

You can use GSS authorization without using ACI encryption by configuring the `GSSServiceName` and `RequireGSSAuth` parameters.

ACI encryption is still available for existing implementations, but it might be incompatible with new functionality. The functionality might be deleted in future.

Documentation

The following documentation was updated for Query Manipulation Server version 12.6.0.

- *QMS Administration Guide*
- *QMS Reference*
