# Send Documentation Feedback

If you have comments about this document, you can [contact the documentation team](#) by email. If an email client is configured on this computer, click the link above and an email window opens with the following information in the subject line:

**Feedback on ArcSight Intelligence SaaS 2022.1.1 Developer's Guide (Intelligence 2022.1.1)**

Just add your feedback to the email and click send.

If no email client is available, copy the information above to a new message in a web mail client, and send your feedback to [cyberressuport@microfocus.com](mailto:cyberressuport@microfocus.com).

We appreciate your feedback!

# Introduction

This guide describes how to use the ArcSight Intelligence REST API, which allows you to manage, develop, and interface with analytics data. This API also provides access to analytics results and related tuning parameters.

## Intended Audience

This Guide assumes that you are an experienced programmer and are familiar with REST APIs, web programming, and your organization's server environment, security infrastructure, and data sources.

You should also be familiar with the business needs of your organization.

## Construct API URLs

To call an endpoint in this API, use the fully-qualified domain name (FQDN) of your **Intersect** node, and append the base path (`/intersect/api`) followed by the path listed in the [Intersect API Reference](#). For example, to call the GET `/tenants` endpoint, use the following URL with the GET method:

```
https://awsnode<intersect_fqdn>/intersect/api/tenants
```

## Retrieve Paginated API Responses

Some endpoints return paginated results. These endpoints include a field called `scrollId` in their responses. To retrieve the next page of results from the same call, call the endpoint again with the same parameters, but this time pass the `scrollId` from the current response in the `scrollId` query parameter of the new API call.

For example, the response from the GET `/search/{tid}/{entityType}/topRisky` endpoint looks similar to the following:

```
{
  "requestTime": 29,
  "data": [
    {
      "entityHash": "bc23443bd21342fa8997e",
      "entityType": "user",
      "entityName": "Annie",
      "risk": 25,
      "riskChange": 0,
    }
  ]
}
```

```
"storyCount": 3,  
"lastActivity": 1453957200,  
"preDecayedRisk": 0,  
"decayedToTimestamp": 0,  
"mostSignificantAlert": null,  
"tags": [  
  {  
    "id": "9v3sdqdC2jd0FJCBuYcAPw",  
    "name": "reviewed",  
    "source": "user",  
    "description": ""  
  }  
],  
},  
],  
"totalHits": 25,  
"scrollId": "vabsjk5h24elkdasjfojdabhgjk32b5b",  
"cached": false  
}
```

Note the returned `scrollId`. To get the next set of results, call the GET `/search/{tid}/  
{entityType}/topRisky` endpoint again, but pass the `scrollId` as a query parameter:

```
curl -X GET --header 'Accept: text/plain' \  
  'https://awsnode<interset_node_fqdn>/interset/api/search/<tenant_  
ID>/files/topRisky?scrollid=vabsjk5h24elkdasjfojdabhgjk32b5b'
```

## Render Anomalies

For some of the search endpoints, you can specify a `markup` parameter. When `markup` is `false`, the returned anomalies contain only English text that can be directly displayed without further processing. When `markup` is `true`, the anomalies may contain markup tags in double curly braces, `{{` and `}}`. The possible tags are as follows:

- **timestamp**

The anomaly time.

The timestamp corresponds to the start of the hour in which the anomaly occurs. For example:

```
"...{{timestamp ms=\"1516748280000\" joda=\"h\" moment=\"h\"}} ..."
```

The **timestamp** can include the following fields:

- **ms**: the epoch (Unix) timestamp. Epoch timestamps are expressed in GMT (i.e., they don't contain time zone information). Usually this timestamp would be rendered in the browser's time zone.

- **joda**: specifies the format to use when rendering with Joda-Time.
- **moment**: specifies the format to use when rendering with Moment.js or date-fns.

If the **moment** field isn't present, the Intelligence UI uses the format string "dddd".

- **entity**

The entity that the text pertains to. For example:

```
"... {{entity name=\"katherine.white\" hash=\"28044feb24be66c7\"  
type=\"user\" risk=21 showRiskBall=false}} ..."
```

The **entity** can include the following fields:

- **name**: the name of the entity.
- **hash**: an internal identifier for the entity that is used in other API calls.
- **type**: identifies the kind of entity. One of: file, machine, project, server, user, volume, printer, share, resource, website, or ip.
- **risk**: the current risk of the entity.
- **showRiskBall**: specifies whether to show a visual indicator of the risk.

- **hover**

Additional text to use for hovering.

```
"... the user {{#hover title=\"accessed in some way\"}} touched {{/hover}}  
27 projects ..."
```

This text provides a hint to the user interface that additional disclosure text is available. The text from the title field could be shown, for example, when the user hovers over the highlighted text.

# Use API with the Swagger UI

You can use Swagger UI to familiarize yourself with API. In the Swagger UI, you can see all the endpoints, their parameters, and sample responses.

**Note:** You must be an Administrator to use the Swagger UI. In addition, you must have the required permissions to call API endpoints. The required permissions vary from endpoint to endpoint.

## To access the Swagger UI:

1. In a Web browser, log in to the Intersect node as an Administrator.
2. On the **Overall Risk** page, click **Settings**  and then, in the dropdown list, select the **Analytics API** or the **Tuning API**.  
Swagger opens in a new browser window.
3. Click a category (such as **actions** or **tenants**) to expand it.  
The endpoints that are part of that category are listed.
4. Click an endpoint to show all its details. You can call an endpoint by click "**Try it out!**", enter in parameters, then click "**Execute**" to run the API call.

## Example: Call an Endpoint

In this example, we will call the `info/build` endpoint.

1. In the Swagger UI, expand **info**, and then expand **GET /info/build**.
2. Scroll down to the **Response Messages** section, and then click **Try it out!**.
3. Click "**Execute**" to run the API call.
4. The response is displayed in the **Response Body** section.

# Interaset API Reference

Version: 2022.1

BasePath: /interaset/api

## actions

POST /actions/login

*Log in*

Authenticates and creates a new session for the specified user identifier and password. Returns a JSON structure containing an access token and the token type.

Consumes

- application/json

Produces

- application/json

Request body

[ApiCredentials](#)

Return type

[LoginResponse](#)

Example data

Content-Type: application/json

```
{
  "access_token" : "802BR4y-kajOPE4agOR_d4RaE-Ja",
  "token_type" : "Bearer"
}
```

Responses

200

successful operation

GET /actions/logoff

*Log off*

Ends the specified user session. Expects an Authorization header containing the string "<token\_type>: <access\_token>". The token\_type is typically "Bearer".

Consumes

- application/json

Produces

- application/json

Request headers

- **Authorization** (optional) -- String

Return type

[ApiAction](#)

Example data

Content-Type: application/json

```
{  
  "success" : true,  
  "detail" : "logged off"  
}
```

Responses

200

successful operation

GET /actions/logoff/saml

*Log off (SAML)*

Expects an Authorization header containing the string "<token\_type>: <access\_token>". You can get both of these using the /actions/login/saml method. The token\_type is typically "Bearer".

This method redirects requests to the SAML logout URL.

Consumes

- application/json

Produces

- application/json

Request headers

- **Authorization** (optional) -- String

Query parameters

- **relayState** (optional)

Responses

default

successful operation

GET /actions/login/oauth2

*Login (OAuth2)*

Login API for OAuth2

Consumes

- application/json

Produces

- application/json

Query parameters

- **relayState** (optional)

Responses

default

successful operation

GET /actions/login/oauth2/callback

*CallBack URI (OAuth2)*

This is callback handler which is registered with OAuth2 provider and this handler will be called with authcode and state info

Consumes

- application/json

Produces

- application/json

Query parameters

- **code** (optional)

- **state** (optional)

## Responses

default

successful operation

GET /actions/logoff/oauth2

*Log off (OAuth2)*

Revokes refresh token and invalidates all the sessions and cookies

Consumes

- application/json

Produces

- application/json

Request headers

- **Authorization** (optional) -- String

Query parameters

- **relayState** (optional)

Responses

default

successful operation

GET /actions/login/oauth2/renew

*Renew Token (OAuth2)*

Generates new access token using refresh token. Sets Intersect Cookie and Authorization header with new access token

Consumes

- application/json

Produces

- application/json

Request headers

- **Authorization** (optional) -- String

Responses

default

successful operation

GET /actions/login/saml

*Get SAML login page*

Returns an HTML document that loads a SAML login page and redirects the user to the requested path, if that path is valid.

Example Response (Status 200)

```
<html><head></head><body><form id='TheForm'  
action='https://company.okta.com/app/investigator/katex9fJY47c0Kh7ij90/sso/saml'

type='hidden' id='RelayState' name='RelayState' value='/interset' /></form><script  
type='text/javascript'>document.getElementById('TheForm').submit  
();</script></body></html>
```

Consumes

- application/json

Produces

- application/json

Query parameters

- **relayState** (optional)

The path where the user should be redirected once authenticated.

Responses

default

successful operation

POST /actions/login/saml/sso

*Log in (SAML SSO)*

Expects an IDP generated SAML response. Processes a signed SAML response.

Consumes

- application/x-www-form-urlencoded

Produces

- application/json

Form parameters

- **SAMLResponse** (optional)
- **RelayState** (optional)

The path where the user should be redirected once authenticated.

Responses

default

successful operation

## events{tenantId}

POST /events/{tid}/savedSearches

*Add a saved search*

Creates a new saved search for the currently logged-in user.

Consumes

- application/json

Produces

- application/json

Path parameters

- **tid** (required)  
The tenant ID.

Request body

[ApiSavedSearches](#)

Return type

[ApiSavedSearchesResponse](#)

Example data

Content-Type: application/json

## Responses

default

successful operation

GET /info/analysedEntities/{tid}

*Get the number of entities that have been ingested and are available for analysis*

Returns the number of availed entities in the dataset.

Example Response (Status 200)

Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `entityType:users OR entityType:machines`):

- **entityType**: Allows filtering using the entityTypes (e.g., `entityType:users`)

Produces

- `application/json`

Path parameters

- **tid** (required)

The tenant ID.

Query parameters

- **q** (optional)

Query filter.

Responses

default

successful operation

GET /info/deployment

*Get deployment information*

Returns information about deployment type.

Example Response (Status 200)

## rawEvents{tenantId}

POST /rawEvents/{tid}/typeAhead

*Auto-complete event field by column*

Produces

- application/json

Path parameters

- **tid** (required)  
The tenant ID.

Request body

[RawEventsTypeaheadRequest](#)

Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te** (optional)  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

Responses

default

successful operation

GET /rawEvents/{tid}/csv

*Get raw data as CSV*

Download raw events in CSV format.

Produces

- application/json

Path parameters

- **tid** (required)  
The tenant ID.

Query parameters

- **q** (optional)  
Accepts a Kibana-type query against the applicable raw data. For example, (user: ("camilla")) AND (project:("csrv/re13/Auditor")).
- **ds** (optional)  
Comma separated list of datasources against which to query. Default includes all.
- **count** (optional)  
The maximum number of raw events to return.
- **tz** (optional)  
The timezone in which the results should be returned (e.g., +5:00, America/Montreal, EST).
- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te** (optional)  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

successful operation

# search{tenantId}

GET /search/{tid}/{rollupLevel}/breakdown/risk

*Get risk breakdown for alerts/anomalies*

Gets the number of anomalies or alerts for each risk breakdown (low, medium, high, extreme).

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "extreme": 38,
    "high": 433,
    "low": 231422,
    "medium": 2103
  },
  "cached": "false"
}
```

## Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

Produces

- application/json

#### Path parameters

- **tid** (required)

The tenant ID.

- **rollupLevel** (required)

The level at which anomalies are combined. Aggregates combine similar alerts within the same time period across entities. Alerts combine similar anomalies within the same time period for a single entity.

#### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Query parameters

- **minRisk** (optional)

Minimum anomaly/alert risk. All anomalies/alerts below this threshold are excluded from the results.

- **maxRisk** (optional)

Maximum anomaly/alert risk. All anomalies/alerts above this threshold are excluded from the results.

- **q** (optional)

Query filter.

- **scType** (optional)

Scaled contribution type. Always use risk; contribution is deprecated.

- **sc** (optional)

Scaled contribution. Deprecated; use minRisk.

- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

#### Responses

- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

### Produces

- application/json

### Path parameters

- **tid** (required)

The tenant ID.

- **rollupLevel** (required)

The level at which anomalies are combined. Aggregates combine similar alerts within the same time period across entities. Alerts combine similar anomalies within the same time period for a single entity.

### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **count** (optional)

count

- **sort** (optional)

Method of sorting alerts.

- **sortOrder** (optional)

Specifies the sort order of the results. Possible values are desc and asc.

- **riskSort** (optional)

Risk sort order in which to return entities.

- **minRisk** (optional)

Minimum anomaly/alert risk. All anomalies/alerts below this threshold are excluded from the results.

- **maxRisk** (optional)

Maximum anomaly/alert risk. All anomalies/alerts above this threshold are excluded from the results.

- **q** (optional)

Query filter.

- **markup** (optional)

Indicates whether to include handlebar markup in alert text. When false, the returned anomalies contain only plain English text that can be displayed directly without further processing. When true, anomalies may contain markup tags in double curly braces, {{ and }}. For more information about rendering the returned anomalies, see the Introduction section of the developer guide.

- **scrollId** (optional)

The scrollId from the previous request. Use this scrollId to get subsequent results.

- **scType** (optional)

Scaled contribution type. Always use risk; contribution is deprecated.

- **sc** (optional)

Scaled contribution. Deprecated; use minRisk.

- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

## Responses

default

successful operation

GET /search/{tid}/{rollupLevel}/count

*Get total count for rollup level*

Gets the total number of aggregates, alerts, or anomalies for the specified tenant and rollup level.

### Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "count": 237086
  },
  "cached": "false"
}
```

## Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

Produces

- application/json

#### Path parameters

- **tid** (required)

The tenant ID.

- **rollupLevel** (required)

The level at which anomalies are combined. Aggregates combine similar alerts within the same time period across entities. Alerts combine similar anomalies within the same time period for a single entity.

#### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Query parameters

- **minRisk** (optional)

Minimum anomaly/alert risk. All anomalies/alerts below this threshold are excluded from the results.

- **maxRisk** (optional)

Maximum anomaly/alert risk. All anomalies/alerts above this threshold are excluded from the results.

- **q** (optional)

Query filter.

- **scType** (optional)

Scaled contribution type. Always use risk; contribution is deprecated.

- **sc** (optional)

Scaled contribution. Deprecated; use minRisk.

- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

#### Responses

default

successful operation

GET /search/{tid}/{rollupLevel}/{rollupId}

*Get anomaly/alert/aggregate for specified rollupId*

Returns the anomaly, alert, or aggregate with the specified rollup ID (anomaly ID, alert ID, aggregate ID).

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "id": "ebea3079901fd4c1",
    "alertId": "ebea3079901fd4c1",

The entity type, for example, user, volume, printer, website, etc.

#### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Query parameters

- **count** (optional)  
The number of entities to return.
- **sortOrder** (optional)  
Specifies the sort order of the results. Possible values are desc and asc.
- **scrollId** (optional)  
The scrollId from the previous request. Use this scrollId to get subsequent results.

#### Responses

default

successful operation

GET /search/{tid}/{entityType}/{entityHash}

*Get entity details*

Given an entity hash, returns the entity's name, type, bot score, tags and clusters.

```
{  
  "requestTime": 29,  
}
```

```
"data": {
  "entityType": "user",
  "entityHash": "a1cb99f133d83b44",
  "entityName": "camilla",
  "botScore": 0.0007642867371433429,

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Responses

default

successful operation

GET /search/{tid}/{entityType}/{entityHash}/risk

*Get the entity risk score*

Returns the current risk score for the specified entity for the specified time range. If the long format is requested, the entity's most significant alert is included in the response. The value of riskChange represents the change in risk over the past day. Note that the long format response and the risk change are populated only when the current risk score is requested for the entity.

#### Example Response (Status 200)

```
{
  "requestTime": 29,

Produces

- application/json

#### Path parameters

- **tid** (required)  
The tenant ID.
- **entityType** (required)  
The entity type, for example, user, volume, printer, website, etc.
- **entityHash** (required)  
Element hash (e.g., 393ff13c9b519ec2).

#### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Query parameters

- **sort** (optional)  
The risk to return for the entity.
- **format** (optional)  
The format of the response. When set to long, the top alert information for the entity is included in the response.
- **markup** (optional)  
Indicates whether to include handlebar markup in alert text. When false, the returned anomalies contain only plain English text that can be displayed directly without further processing. When true, anomalies may contain markup tags in double curly braces, {{ and }}. For more information about rendering the returned anomalies, see the Introduction section of the developer guide.
- **tz** (optional)  
The timezone in which the results should be returned (e.g., +5:00, America/Montreal, EST).
- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te** (optional)  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

#### Responses

default

successful operation

GET /search/{tid}/{entityType}/{entityHash}/riskGraph

*Get the entity risk graph*

Returns a timeline of an entity's risk scores in a given time range. The risk returned in each time bucket represents the maximum risk for that entity within that bucket's time range.

Example Response (Status 200)

The first array represents the start of each time bucket in seconds. Buckets with no risk are omitted. Each item in the second array represents the risk score for the bucket at the same index in the first array.

```
{
  "requestTime": 29,
  "data": [
    {
      "risk": 14,
      "timestamp": 1457982000
    },
    {
      "risk": 5,
      "timestamp": 1458003600
    },
    {
      "risk": 12,
      "timestamp": 1458046800
    }
  ],
  "cached": "false"
}
```

Produces

- application/json

Path parameters

- **tid** (required)  
The tenant ID.
- **entityType** (required)  
The entity type, for example, user, volume, printer, website, etc.
- **entityHash** (required)  
Element hash (e.g., 393ff13c9b519ec2).

Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **count** (optional)

The number of time buckets to return between ts and te. Each time bucket contains the entity's maximum risk in that time range.

- **interval** (optional)

The bucket interval (supersedes the count parameter). Accepted values are: "day". Buckets are broken down based on the requested time zone.

- **tz** (optional)

The timezone in which the results should be returned (e.g., +5:00, America/Montreal, EST).

- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

successful operation

GET /search/{tid}/users/bots

*Get bot users*

Returns bot users ordered by descending bot score.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": [
    {
      "entityName": "anne@intserset.com",
      "entityHash": "aadfd74dc21710de",
      "entityType": "bot",
      "risk": 0.73,
    }
  ]
}
```

```
    "tags": [  
      {  
        "id": "tagId0987",  
        "name": "FORCEBOT",  
        "source": "analytics",  
        "description": ""  
      },  
      {  
        "id": "tagId1244",  
        "name": "BOT",  
        "source": "analytics",  
        "description": ""  
      }  
    ]  
  },  
  "cached": "false"  
}
```

#### Produces

#### Path parameters

- **tid** (required)  
The tenant ID.

#### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Query parameters

- **count** (optional)  
The number of bots to return

#### Responses

default

successful operation

GET /search/{tid}/distribution/risk

*Get entity risk distribution*

Returns the number of entities associated with each risk level at the most current time in the dataset.

### Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "risks": {
      "high": 0,
      "total": 370,
      "low": 370,
      "medium": 0,
      "extreme": 0
    },
    "entityTypes": ["projects", "users"],
    "name": "risk",
    "count": 4,
    "type": "current"
  },
  "cached": "false"
}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

### Produces

- application/json

### Path parameters

- **tid** (required)  
The tenant ID.

### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET `/api/info/build` to see available API versions.

## Query parameters

- **q** (optional)  
Query filter.
- **includeAssociatedEntities** (optional)  
If `false` and the `q` parameter filters for one or more entities and/or entity types, related entities of other entity types are not returned.
- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te** (optional)  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

## Responses

default

successful operation

GET /search/{tid}/{entityType}/distribution/risk

*Get the entity risk distribution*

Provides an overview of how many entities of the specified type are associated with each risk level at the most current time in the dataset.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "risks": {
      "high": 0,
      "total": 370,
      "low": 370,
      "medium": 0,
      "extreme": 0
    },
    "entityTypes": ["projects"],
    "name": "risk",
    "count": 4,
    "type": "current"
  },
}
```

```
"cached": "false"  
}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

### Produces

- application/json

### Path parameters

- **tid** (required)  
The tenant ID.
- **entityType** (required)  
The entity type, for example, `user`, `volume`, `printer`, `website`, etc.

### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call `GET /api/info/build` to see available API versions.

### Query parameters

- **q** (optional)  
Query filter.
- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, `'first monday in july, 2017'`, or `'10 days ago'`.
- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

## Responses

default

successful operation

GET /search/{tid}/info

### *Get tenant data overview*

Provides an overview of the tenant's data. Information includes scored entities and their counts, the total number of events analyzed, the anomalies discovered, and the time the tenant was last modified.

### Example Response (Status 200)

```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the `entityHash`; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the `entityName`; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same `entityType` are automatically ORed, and those concerning different entities are ANDed.

### Produces

- `application/json`

### Path parameters

- **tid** (required)  
The tenant ID.
- **type** (required)  
The type of anomaly representation that should be graphed on the matrix.

### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call `GET /api/info/build` to see available API versions.

### Query parameters

- **rn** (optional)  
The number of risk rows to include in the matrix.
- **tn** (optional)  
The number of time buckets into which the time window should be split (matrix columns)
- **q** (optional)  
Query filter.
- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te** (optional)  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

#### Responses

```
default
```

successful operation

GET /search/{tid}/riskGraph/breakdown

#### *Population risk breakdown*

Returns a list of time buckets containing a breakdown of anomaly contribution to the population risk at each of those points in time. The risk can be included in the response by setting the query string parameter `includeRisk` to `true`. For performance reasons, we recommend that you call the `/riskGraph` endpoint if you are fetching only the risk.

A breakdown of contribution can be retrieved by:

- **risk**: Breakdown of anomaly risk levels that contributed to the current population risk
- **entityType**: Breakdown of the entityTypes involved in anomalies that contributed to the current population risk
- **threat/workingDays**: Breakdown of threat types involved in anomalies that contributed to the current population risk

Example Response (Status 200)

Example of population risk breakdown by entity type:

```
{  
  "requestTime": 29,
```

```
"data": {
  "breakdown": [
    {
      "timestamp": 1479898800,

    "websites",
    "ips"
  ]
},
"cached": "false"
}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.

- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

Produces

- application/json

Path parameters

- **tid** (required)  
The tenant ID.

Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET `/api/info/build` to see available API versions.

Query parameters

- **count** (optional)  
If interval is set to day, the number of days to graph, working backwards from te; otherwise, the number of time buckets to return between ts and te. Each time bucket contains the entity's maximum risk in that time range. Maximum value of 100. The minimum bucket size is 1 hour.
- **interval** (optional)  
Bucket interval (supersedes the count parameter). Accepted values are: "day". Buckets are broken down based on the requested timezone.
- **breakdownBy** (optional)  
Specifies how the risk contribution is broken down
- **includeRisk** (optional)  
When true, indicates that the risk for each bucket should be returned. The risk can be retrieved in parallel for the same buckets by using the `/riskGraph` endpoint with the same parameters.
- **tz** (optional)  
The timezone in which the results should be returned (e.g., `+5:00, America/Montreal, EST`).
- **q** (optional)  
Query filter.
- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

## Responses

default

successful operation

GET /search/{tid}/riskGraph

### *Population risk graph*

Returns a list of time buckets containing the population risk at each of those points in time. The risk in each bucket represents a combination of the risk scores at that time for each entity not filtered out.

### Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "breakdown": [
      {
        "timestamp": 1479898800,
        "timestampStr": "2016-11-23T03:00:00-08:00[America/Los_Angeles]",
        "risk": 32.0
      },
      {
        "timestamp": 1479985200,
        "timestampStr": "2016-11-24T03:00:00-08:00[America/Los_Angeles]",
        "risk": 38.0
      }
    ]
  },
  "cached": "false"
}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use serverid, projectid, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use server, project, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., anomalies:201,202).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

default

successful operation

GET /search/{tid}/templates

*Get examples of rendered alert templates*

Returns an example showing how each anomaly type is rendered into a human-readable sentence using the templating engine. The response can be filtered to retrieve only anomalies of a single type or belonging to a specific datasource.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": [
    {
      "template": {
        "threat": "Suspicious Activity",
        "family": "Application/Protocol Use",
        "teaser": "7-8 PM Dec 20, 2012: Used EXPLORER rare for User.",
        "alert": "It was very unusual that {user1} used the application EXPLORER,
having only used that application 2 days.",
        "tooltip": ""
      },
      "category": "Endpoint",
      "threat": {
        "name": "Suspicious Activity",
        "description": "When a user who rarely uses an application then uses it, this
may represent suspicious activity."
      },
      "family": {
        "name": "Application/Protocol Use"
      },
      "anomalyType": 129,
      "datasource": "endpoint"
    }
  ],
  "cached": "false"
}
```

Produces

- application/json

Path parameters

- **tid** (required)

The tenant ID.

Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **ds** (optional)

Data source

- **anomalyType** (optional)

Anomaly type

- **markup** (optional)

Indicates whether to include handlebar markup in alert text. When false, the returned anomalies contain only plain English text that can be displayed directly without further processing. When true, anomalies may contain markup tags in double curly braces, {{ and }}. For more information about rendering the returned anomalies, see the Introduction section of the developer guide.

Responses

default

successful operation

GET /search/{tid}/{entityType}/topAccessed

*Get the top accessed entities by entity type*

Returns a list of entities, ordered by the number of times they were accessed.

Example Response (Status 200)

The keys represent the number of accesses, and their respective values represent the entities that recorded that number of accesses

```
{
  "requestTime": 29,
  "data": {
    "12": [
      {

}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

### Produces

- application/json

### Path parameters

- **tid** (required)  
The tenant ID.
- **entityType** (required)  
The entity type, for example, `user`, `volume`, `printer`, `website`, etc.

### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **count** (optional)

The number of top accessed entities to return

- **q** (optional)

Query filter.

- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

GET /search/{tid}/users/topExitProducers

*Get top producers of exit events*

Returns the users with the top number of events representing information exiting the system, for example, through a printer or USB.

Example Response (Status 200)

The keys represent the number of exit events, and their respective values represent the entities that generated that number of exit events.

```

}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

### Produces

- application/json

### Path parameters

- **tid** (required)  
The tenant ID.

### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **sort** (optional)

Risk sort order in which to return entities.

- **format** (optional)

The format of the response. When set to long, the top alert information for the entity is included in the response.

- **q** (optional)

Query filter.

- **includeAssociatedEntities** (optional)

If false and the q parameter filters for one or more entities and/or entity types, related entities of other entity types are not returned.

- **markup** (optional)

Indicates whether to include handlebar markup in alert text. When false, the returned anomalies contain only plain English text that can be displayed directly without further processing. When true, anomalies may contain markup tags in double curly braces, {{ and }}. For more information about rendering the returned anomalies, see the Introduction section of the developer guide.

- **tz** (optional)

The timezone in which the results should be returned (e.g., +5:00, America/Montreal, EST).

- **count** (optional)

Number of top risky entities to return

- **scrollId** (optional)

The scrollId from the previous request. Use this scrollId to get subsequent results.

- **includeNonAnomalous** (optional)

Set to true to include entities that never triggered anomalies

- **ts** (optional)

Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

- **te** (optional)

End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

## Responses

default

successful operation

GET /search/{tid}/{entityType}/topRisky

*Get top risky entities by type*

Returns a list of the top riskiest entities by type.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": [
    {
      "entityHash": "bc23443bd21342fa8997e",
      "entityType": "user",
      "entityName": "Annie",
      "risk": 25,
      "riskChange": 0,
      "lastActivity": 1453957200,
      "preDecayedRisk": 0,
      "decayedToTimestamp": 0,
      "mostSignificantAlert": null,
      "tags": [
        {
          "id": "9v3sdqdC2jd0FJCBuYcAPw",
          "name": "reviewed",
          "source": "user",
          "description": ""
        }
      ]
    }
  ],
  "totalHits": 25,
  "scrollId": "vabsjk5h24elkdasjfojdabhgjk32b5b",
  "cached": false
}
```

## Filtering the results

The results can be filtered using the q parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use serverid, projectid, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use server, project, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., anomalies:201,202).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

Produces

- application/json

Path parameters

- **tid** (required)  
The tenant ID.
- **entityType** (required)  
The entity type, for example, user, volume, printer, website, etc.

Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **sort** (optional)  
Risk sort order in which to return entities.
- **format** (optional)  
The format of the response. When set to long, the top alert information for the entity is included in the response.
- **q** (optional)  
Query filter.
- **markup** (optional)  
Indicates whether to include handlebar markup in alert text. When false, the returned anomalies contain only plain English text that can be displayed directly without further processing. When true, anomalies may contain markup tags in double curly braces, {{ and }}. For more information about rendering the returned anomalies, see the Introduction section of the developer guide.

- **tz** (optional)  
The timezone in which the results should be returned (e.g., +5:00, America/Montreal, EST).
- **count** (optional)  
The number of top risky entities to return
- **scrollId** (optional)  
The scrollId from the previous request. Use this scrollId to get subsequent results.
- **includeNonAnomalous** (optional)  
Set to true to include entities that never triggered anomalies
- **ts** (optional)  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te** (optional)  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.

default

successful operation

GET /search/{tid}/{rollupLevel}/{rollupId}/expand

*Get children of aggregate/alert/anomaly*

Returns the children of the specified rollup ID. If an aggregate ID is specified, this method returns the child alerts. If an alert ID is specified, the child anomalies are returned. Nothing is returned when an anomaly ID is specified because anomalies are the lowest level and have no children.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": [
    {
      "id": "ebea3079901fd4c1",
      "alertId": "ebea3079901fd4c1",
      "datasource": "repo",
      "timestamp": 1393453400,
      "risk": 8100,
    }
  ]
}
```

  11
],
"numAnomalies": 2,
"category": "Repository",
"bucketSize": "hourly",
"rollupLevel": "alerts",
"numChildren": 2,
"parentId": null,
"kibana": {
  "searchQuery": "",
  "indexName": ""
},
"contextAnomalyId": "",
"contextType": "none"
}
],
"totalHits": 25,
"cached": false,
"scrollId": "vabsjk5h24e1kdasjfojdabhgjk32b5b"
}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

Produces

- application/json

#### Path parameters

- **tid** (required)

The tenant ID.

- **rollupLevel** (required)

The level at which anomalies are combined. Aggregates combine similar alerts within the same time period across entities. Alerts combine similar anomalies within the same time period for a single entity.

- **rollupId** (required)

The ID of the aggregate, alert or anomaly to match.

#### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

#### Query parameters

- **minRisk** (optional)

Minimum anomaly/alert risk. All anomalies/alerts below this threshold are excluded from the results.

- **maxRisk** (optional)

Maximum anomaly/alert risk. All anomalies/alerts above this threshold are excluded from the results.

- **count** (optional)

- **q** (optional)

Query filter.

- **markup** (optional)

Indicates whether to include handlebar markup in alert text. When false, the returned anomalies contain only plain English text that can be displayed directly without further processing. When true, anomalies may contain markup tags in double curly braces, {{ and }}. For more information about rendering the returned anomalies, see the Introduction section of the developer guide.

- **scrollId** (optional)

The scrollId from the previous request. Use this scrollId to get subsequent results.

- **sort** (optional)

Method of sorting alerts.

- **sortOrder** (optional)  
Specifies the sort order of the results. Possible values are desc and asc.
- **riskSort** (optional)  
Risk sort order in which to return entities.
- **scType** (optional)  
Scaled contribution. Deprecated; use minRisk.
- **sc** (optional)  
Scaled contribution. Deprecated; use minRisk.

    }
  ],
  "cached": "false"
}
```

#### Consumes

- application/json

#### Produces

- application/json

#### Path parameters

- **tid** (required)  
The tenant ID.
- **boolOperator** (required)

Indicates whether the returned entities must have any or all of the specified tags. Possible values are `any` (return entities with any of the specified tags) or `all` (return entities with all the specified tags).

#### Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call `GET /api/info/build` to see available API versions.

#### Query parameters

- **tag** (optional)

A list of tags, formatted as `tag=<tagID1>&tag=<tagID2>&tag=<tagID3> . . .`. In the UI, enter unquoted tag IDs in the textbox, one per line.

- **count** (optional)

The number of tagged elements to return.

- **scrollId** (optional)

The `scrollId` from the previous request. Use this `scrollId` to get subsequent results.

#### Responses

default

successful operation

`GET /search/{tid}/tags`

*Get all tags for a tenant*

Get all tags for this tenant. Tags can be configured either by a user through the UI, or by Analytics. The payload specifies the source of the tag.

#### Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": [
    {
      "name": "exfiltrate",
      "description": null,
      "entities": [],
      "id": "f2c23b9def498aeb",
      "created": "2017-11-30T23:58:55.529Z",
      "createdBy": "td5",
      "modified": "2017-12-01T00:16:56.016Z",
      "modifiedBy": "td5",
      "source": "user"
    }
  ]
}
```

```
  },  
  {  
    "name": "recon",  
    "description": null,  
    "entities": [],  
    "id": "46b489f7f46588c6",  
    "created": "2017-11-30T23:59:38.737Z",  
    "createdBy": "td5",  
    "source": "user"  
  }  
],  
"cached": "false"  
}
```

### Filtering the results

The results can be filtered using the `q` parameter, which accepts a filter query (e.g., `userid:a1cb99f133d83b44 AND risk:extreme`):

- **userid**: Allows filtering using the entityHash; use `serverid`, `projectid`, and so on, to filter on other types of scored entities.
- **user**: Allows filtering using the entityName; use `server`, `project`, and so on, to filter on other types of scored entities.
- **risk**: Allows filtering by risk level (low, medium, high, extreme).
- **anomalies**: Allows filtering by anomaly types (e.g., `anomalies:201,202`).

Although the operators AND and OR serve as separators between different filters, their respective values are currently ignored. Filters concerning the same entityType are automatically ORed, and those concerning different entities are ANDed.

### Consumes

- application/json

### Produces

- application/json

### Path parameters

- **tid** (required)  
The tenant ID.

### Request headers

- **Intersect-Version** (optional) -- String  
Indicates which version of the API to use. Defaults to the latest version. Call GET `/api/info/build` to see available API versions.

### Query parameters

- **source** (optional)  
Indicates how the tag was created (either by a user or by analytics).
- **q** (optional)  
Query filter.
- **typeahead** (optional)  
The text to be used to match tags by name.

#### Responses

default

successful operation

DELETE /search/{tid}/tags/{tagId}/{tagElementType}/{elementHash}

*Remove a tag from a single element*

Deletes a tag from an element such as an entity or an alert.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "message": "46b489f7f46588c6 successfully removed from 'entities' element
75c2599ddf50ea85"
  },
  "cached": "false"
}
```

#### Consumes

- application/json

#### Produces

- application/json

#### Path parameters

- **tid** (required)  
The tenant ID.
- **tagId** (required)  
The ID of the tag (e.g., mQhWWuPFNqti-w-AINWHdA).
- **elementHash** (required)  
The element hash (e.g., 393ff13c9b519ec2).

- **tagElementType** (required)

The type of element with which the tag is associated.

Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET /api/info/build to see available API versions.

Query parameters

- **retries** (optional)

The number of times to retry the update operation if a conflict occurs.

Responses

default

successful operation

POST /search/{tid}/tags/{tagId}/{tagElementType}/remove

*Remove a tag from multiple elements*

Deletes a tag from a list of elements of the same type.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "message": "46b489f7f46588c6 successfully removed from entities:
[\"75c2599ddf50ea85\", \"75c2599ddf50ea86\"]"
  }, "cached": "false"
}
```

Consumes

Produces

- application/json

Path parameters

- **tid** (required)

The tenant ID.

- **tagId** (required)

The ID of the tag (e.g., mQhWWuPFNqti-w-AINWHdA).

- **tagElementType** (required)

The type of element with which the tag is associated.

Request body

### [ApiTagEntities](#)

A list of element hashes.

Request headers

- **Intersect-Version** (optional) -- String

Indicates which version of the API to use. Defaults to the latest version. Call GET `/api/info/build` to see available API versions.

Query parameters

- **retries** (optional)

The number of times to retry the update operation if a conflict occurs.

Responses

default

successful operation

POST `/search/{tid}/tags/{tagId}/update`

### *Update a tag*

Changes the specified a tag.

Example Response (Status 200)

```
{
  "requestTime": 29,
  "data": {
    "name": "changedTag",
    "description": "testing tags",
    "entities": [],

Request body

[array\[Tenant\]](#)

#### Responses

default

successful operation

PUT /tenants/{tid}/users/{userId}

*Update user details*

Create or update the details of a user, or link a user to a tenant.

When you link an existing user to a tenant, the body of the request must contain only the `role`, `userId` and `tenantId` fields. Any update to the `name` and `password` fields must be made against a tenant with which the user is already associated, unless it is a new user, in which case it can be created and linked to a tenant in the same request.

## Models

ApiAction

- **success** -- Boolean
- **detail** -- String

ApiCredentials

- **username** -- String
- **password** -- String

ApiDashboard

- **doc** -- String
- **name** -- String
- **description** -- String
- **tid** -- String
- **userId** -- String
- **id** -- Integer  
Format: int32
- **lastModifiedBy** -- String
- **creationDate** -- Date  
Format: date-time
- **lastModifiedDate** -- Date  
Format: date-time
- **home** -- Boolean
- **tags** -- array[ApiDashboardTag]
- **private** -- Boolean

#### ApiDashboardTag

- **name** -- String  
A name for the tag.
- **id** -- String  
Tag ID

#### ApiEntityNameRequest

- **entityName** -- String
- **entityType** -- String

#### ApiHash

- **hash** -- String

#### ApiMetaRequest

- **resourceType**(Required) -- String

The type of the meta resource e.g. comment, annotation, tag, dashboard, visualization and so on.

Enumeration:

- comment
- annotation
- dashboard
- tag
- tuning
- anomalySeen

- **destinationId**(Required) -- String

The ID of the destination.

- **destinationType**(Required) -- String

The type of the source. Currently supported

Enumeration:

- alerts
- anomalies
- entities

- **content**(Required) -- String

The raw content of the object. This is a full text search. Larger than 128KB can significantly impact the search performance.

- **contentType**(Required) -- String

Currently supported: markdown, plaintext, html

Enumeration:

- plaintext
- markdown
- json
- html

#### ApiSavedSearches

- **name** -- String

- **doc** -- JsonNode

- **columns** -- JsonNode

ApiSavedSearchesDraft

- **docDraft** -- JsonNode
- **columnsDraft** -- JsonNode

ApiSavedSearchesResponse

- **name** -- String
- **doc** -- JsonNode
- **columns** -- JsonNode
- **id** -- Integer  
Format: int32
- **docDraft** -- JsonNode
- **columnsDraft** -- JsonNode

ApiSessionTenant

- **userId** -- String  
The user ID.
- **tenantId** -- String  
The tenant ID.
- **role** -- String  
The user's role for this tenant. The role determines the permissions for the user.  
Enumeration:
  - tnb
  - connector
  - admin
  - user
  - none
  - root
- **tenantName** -- String

The tenant name.

- **features** -- array[String]

A list of UI configuration features.

#### ApiSimpleDashboard

- **doc** -- String
- **name** -- String
- **description** -- String
- **private** -- Boolean

#### ApiSimpleDashboardTag

- **name** -- String
- A name for the tag.

#### ApiTagEntities

- **entities** -- array[String]

#### ApiTenantUser

- **userId** -- String  
The user ID.
- **tenantId** -- String  
The tenant ID.
- **name** -- String  
The user's display name.
- **role** -- String  
The user's role for this tenant. The role determines the permissions for the user.

Enumeration:

- tnb
- connector
- admin
- user

- none
- root
- **isActive** -- Boolean  
When `false`, this user has been marked as inactive in an external authentication service.
- **password** -- String
- **created** -- Long  
The date in milliseconds when this user was created. Format: int64
- **persistentSessions** -- Boolean  
When set to `true`, sessions will not expire for this user.
- **local** -- Boolean  
When set to `true`, this user is local.

#### ApiTheme

- **loginGradient1** -- String
- **loginGradient2** -- String
- **accent** -- String
- **navBar** -- String
- **font1** -- String
- **font2** -- String
- **font3** -- String
- **banner** -- String
- **bannerLabel** -- String
- **companyName** -- String
- **footerLabel** -- String
- **footerEnabled** -- Boolean
- **loginLogo** -- String
- **navBarLogo** -- String

#### ApiUrl

- **url** -- String

#### DbUser

- **userId** -- String
- **name** -- String
- **isActive** -- Boolean
- **passwordHash** -- String
- **passwordSalt** -- String
- **timestamp** -- Date  
Format: date-time
- **persistentSessions** -- Boolean
- **properties** -- map[String, String]

#### JsonNode

- **valueNode** -- Boolean
- **containerNode** -- Boolean
- **missingNode** -- Boolean
- **object** -- Boolean
- **nodeType** -- String

#### Enumeration:

- ARRAY
- BINARY
- BOOLEAN
- MISSING
- NULL
- NUMBER
- OBJECT
- POJO
- STRING

- **pojo** -- Boolean
- **number** -- Boolean
- **integralNumber** -- Boolean
- **floatingPointNumber** -- Boolean
- **short** -- Boolean
- **int** -- Boolean
- **long** -- Boolean
- **float** -- Boolean
- **double** -- Boolean
- **bigDecimal** -- Boolean
- **bigInteger** -- Boolean
- **textual** -- Boolean
- **boolean** -- Boolean
- **binary** -- Boolean
- **array** -- Boolean
- **empty** -- Boolean
- **null** -- Boolean

#### LoginResponse

- **access\_token** -- String  
Access token.
- **token\_type** -- String  
Token type (e.g., Basic, Bearer); usually Bearer.

#### RawEventsGraphRequest

- **query** -- JsonNode
- **sortFields** -- array[SortField]
- **datasources** -- array[String]

Enumeration:

- **ts** -- Long  
Format: int64
- **te** -- Long  
Format: int64
- **grouping** -- String
- **fields** -- array[String]

RawEventsRequest

- **query** -- JsonNode
- **sortFields** -- array[SortField]
- **datasources** -- array[String]

Enumeration:

- **ts** -- Long  
Format: int64
- **te** -- Long  
Format: int64

RawEventsTypeaheadRequest

- **query** -- JsonNode
- **sortFields** -- array[SortField]
- **datasources** -- array[String]

Enumeration:

- **ts** -- Long  
Format: int64
- **te** -- Long  
Format: int64
- **count** -- Integer  
Format: int32
- **field** -- String

- **text** -- String
- **sort** -- String

Enumeration:

- asc
- desc

#### ServiceProxyInfo

- **prefix** -- String
- **schema** -- String
- **description** -- String
- **permissionsByMethod** -- map[String, String]

Enumeration:

- **menu** -- String
- **name** -- String

#### Session

- **user** -- DbUser
- **accessToken** -- String
- **expirationDate** -- Date  
Format: date-time
- **maxSessionAge** -- Integer  
Format: int32
- **rolesPerTenant** -- map[String, String]

Enumeration:

#### SessionInfo

- **userId** -- String  
The user ID.
- **userDisplayName** -- String

The user's display name.

- **extendedApi** -- array[ServiceProxyInfo]  
The available proxied APIs.
- **persistentSessions** -- Boolean  
When set to true, sessions will not expire for this user.
- **disableTenantManagement** -- Boolean  
When set to true, multi-tenant support is disabled.
- **accessToken** -- String  
The current access token for this user
- **roles** -- array[ApiSessionTenant]
- **analyticsTuningAvailable** -- Boolean  
Set to true to allow the tuning of analytics.
- **swaggerEndpoints** -- map[String, String]  
Available Swagger Endpoints

#### SortField

- **field** -- String
- **order** -- String  
Enumeration:
  - asc
  - desc

#### TagBase

- **name** -- String  
A name for the tag.
- **description** -- String  
A description of the tag.
- **entities** -- array[String]

#### Tenant

- **tenantId** -- String  
The tenant ID. Must be 1 to 3 alpha-numerical characters.
- **name** -- String  
The tenant name.
- **created** -- Date  
The tenant creation date. Format: date-time

# Tuning API Reference

Version: 2022.1

BasePath: /interset/tuning

## Alerts Meta

GET /{tid}/alerts\_meta/{alertName}

Produces

- application/json

Path parameters

- **tid** (required)  
Tenant ID
- **alertName** (required)  
Alert Name

Return type

[AlertsMeta](#)

Example data

Content-Type: application/json

```
{
  "alertType" : "alertType",
  "alertName" : "alertName",
  "anomalyType" : 6,
  "tid" : "tid",
  "did" : 0,
  "ds" : "ds"
}
```

Responses

200

successful operation

GET /{tid}/alerts\_meta

Produces

- application/json

Path parameters

- **tid** (required)

Tenant ID

Return type

array[AlertsMeta]

Example data

Content-Type: application/json

```
[ {  
  "alertType" : "alertType",  
  "alertName" : "alertName",  
  "anomalyType" : 6,  
  "tid" : "tid",  
  "did" : 0,  
  "ds" : "ds"  
}, {  
  "alertType" : "alertType",  
  "alertName" : "alertName",  
  "anomalyType" : 6,  
  "tid" : "tid",  
  "did" : 0,  
  "ds" : "ds"  
} ]
```

Responses

# Exports API Reference

Version: 2022.1

BasePath: /exports

The Exports API provides a mechanism for exporting reports that contain the information presented in the Intelligenceuser interface.

## Construct Exports API URLs

To call an endpoint in this API, use the fully-qualified domain name (FQDN) of your **Intersect** node, and append the base path (/exports) followed by the path listed in the sections that follow. For example, to call the GET /info/build endpoint, use the following URL with the GET method:

```
https://awsnode<intersect_node_fqdn>/exports/info/build
```

## Exports API Endpoints

### GET /dashboard

*Get risk report*

Generates a detailed report of the organizational risk, including sections for Top Anomalies and Violations, Top Risky Users, Top Risky Projects, and so on.

### Consumes

- application/json

### Produces

- application/pdf

### Query Parameters

- **tid**  
The tenant ID.
- **format**  
The format of the exported dashboard (pdf, jpeg, or png).

- **ts**  
Start time in seconds. If no value is provided, the start time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **te**  
End time in seconds. If no value is provided, the end time of the dataset is used. You can also use (case-insensitive) natural language with relative times, for example, 'first monday in july, 2017', or '10 days ago'.
- **tz**  
The timezone in which the results should be returned (e.g., +5:00, America/Montreal, EST).

## Return type

String

## Responses

```
200 OK
```

Successful operation

## GET /info/build

*Get version information*

Returns information about this version of the Exports API.

## Example Response (Status 200)

```
{"Build-Number": "5.7.0.937"}
```

## Produces

application/json

## Responses

```
200 OK
```

Successful operation
