NetIQ SecureLogin System Requirements

June 2021

NetIQ Corporation recommends the fully tested and certified platforms described in this page. However, customers running on other platforms or with untested configurations will be supported until the point NetIQ Corporation determines that the root cause is the uncertified platform or configuration. Issues that can be reproduced on the certified platforms will be prioritized and fixed according to standard defect-handling policies. For more information about support polices, see Support Policies.

For more information about SecureLogin, see *NetIQ SecureLogin Overview Guide*.

This document provides the minimum requirements to install SecureLogin. Ensure that you review these requirements before installation, particularly those related to the operating system.

IMPORTANT: In the preceding table, **Certified** includes the versions that are tested and supported. Whereas, **Supported** includes the versions that are not tested but are expected to work.

Disk Space	128 MB **NOTE:** An additional 55 MB is required for temporary files that is deleted after installation is complete.
