## Enhancements

The following feature was enhanced for this release:

- As per the online patch readiness for upgrades, when you upgrade OEBS from lower version to 12.2.x, the table synonym should point to the editioning view and not to the base table in custom schema, if the editioning view exists in that schema.

The same feature has been incorporated as enhancement in SDM Appspack where synonym points to edition enabled view.

- When you fetch a parameter, the inventory reload transaction takes less time to fetch the value.
