1. User Guide

OpenText™ Database Activity Monitoring (DAM) provides privileged user and application access monitoring that is independent of native database logging and audit functions. It can function as a compensating control for privileged user separation-of-duties issues by monitoring administrator activity.

DAM monitors database activity without audit subsystem of the respective database server being turned on. It classifies and correlates the audit logs and store them outside the database to comply with separation-of-duties principle. DAM also ensures that a service account only accesses a database from a defined source, and only runs a narrow group of authorized queries. This can be used to detect compromises of a service account either from the system that normally uses it, or if the account credentials show up in a connection from an unexpected system.

DAM Agents can record all SQL transactions (DML, DDL, DCL, and TCL) without relying on local database logs, thus reducing performance degradation. DAM lets you:

Monitor Logins - Monitor successful and failed logons and ensure they are from predefined and valid sources.

Monitor Changes - Audit SELECT, UPDATE, DELETE, EXEC, and other SQL statements.

Monitor Access to Sensitive Information - Monitor who is accessing sensitive information. When the unexpected happens generate alerts.

Monitor Privileged Users - Audit DBA/Developer activity and configuration changes to the database system.

Generate Reports - Pre-defined policies and reports for PCI, SOX, and other generic compliance requirements.

1.1. Abbreviations

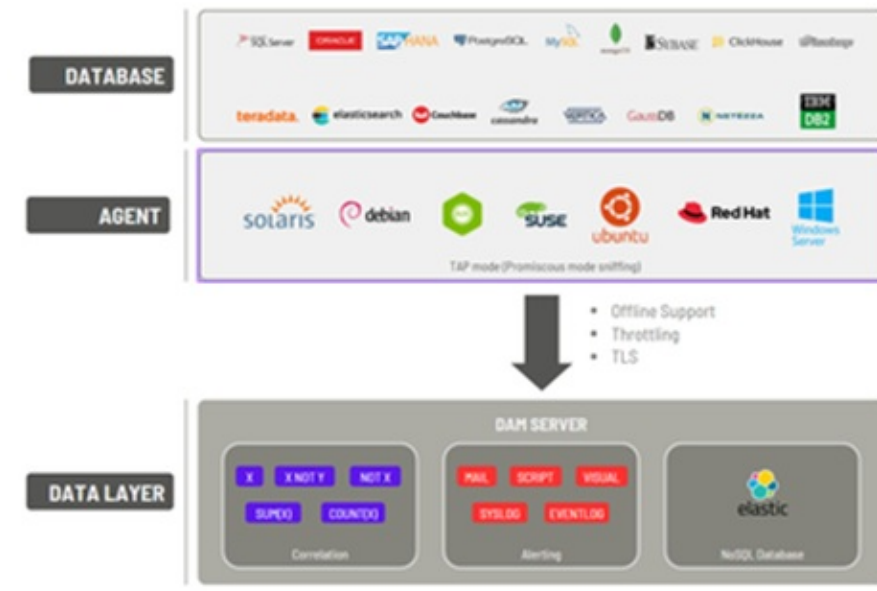

Abbreviations	Definition
DAM	Database Activity Monitoring
DSIM	DAM Installation Manager
DSPL	DAM Socket TAP Module
DSTAP	DAM TAP Module
LDAP	Lightweight Directory Access Protocol
OpenVAS	Open Vulnerability Assessment Scanner
SIEM	Security Information and Event Management
SMTP	Simple Mail Transfer Protocol

1.2. DAM Users and Roles

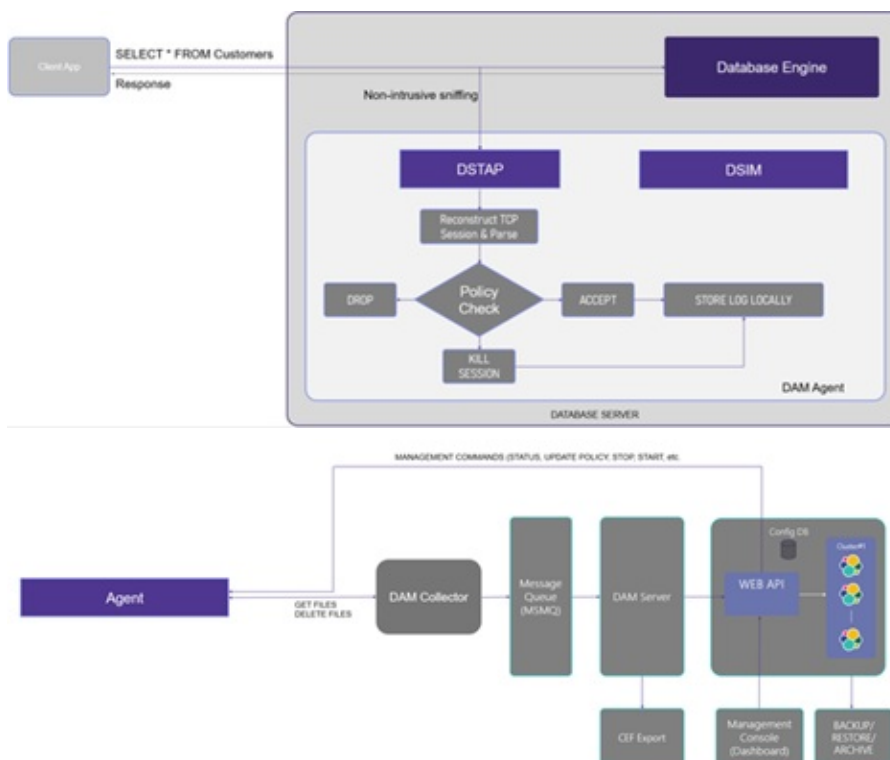

DAM has flexible user role management support that makes DAM available to create its roles depending on the privileges defined before. These roles are like groups in DAM. New roles can be created by admin, and users can be assigned to these roles. For more details, see [All Settings](#).

1.3. DAM Architecture

System Architecture

Logical Architecture

1.4. Logging in to DAM

The user should log in to OpenText™ Database Activity Monitoring application.

1. Double click on OpenText™ Database Activity Monitoring icon.

2. Enter **Server Name**, **Username**, and **Password** on the DAM login page.

The login page for OpenText Database Activity Monitoring. It has a dark blue background with the 'opentext™' logo and 'Database Activity Monitoring' text at the top. Below this are three input fields: 'Server Name', 'User Name', and 'Password'. There is a 'Remember me' checkbox and a 'Sign in' button at the bottom.

3. Click **Sign In**.

Note

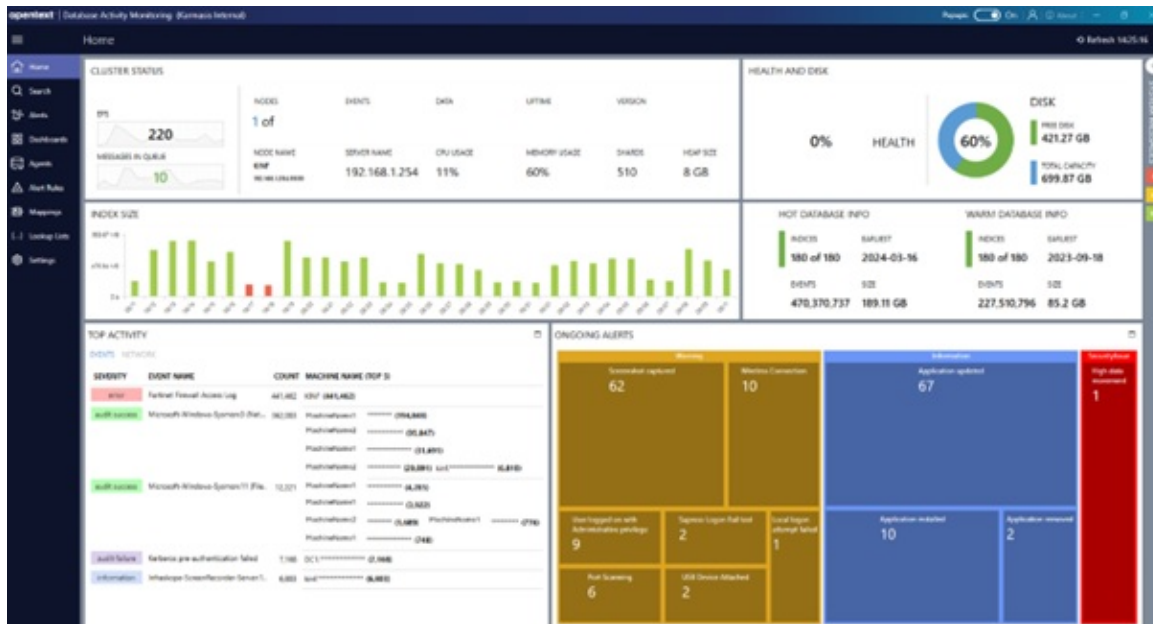

The Server Name field can be filled in 3 ways: localhost, Server IP, or Server hostname.

- If logging in through the server, the user writes localhost.
- If accessing the server from user's environment, the user writes the Server IP or Server hostname.

1.5. Dashboard

Menu and Controls

DAM has nine menu items and some control buttons. These are listed in the table below

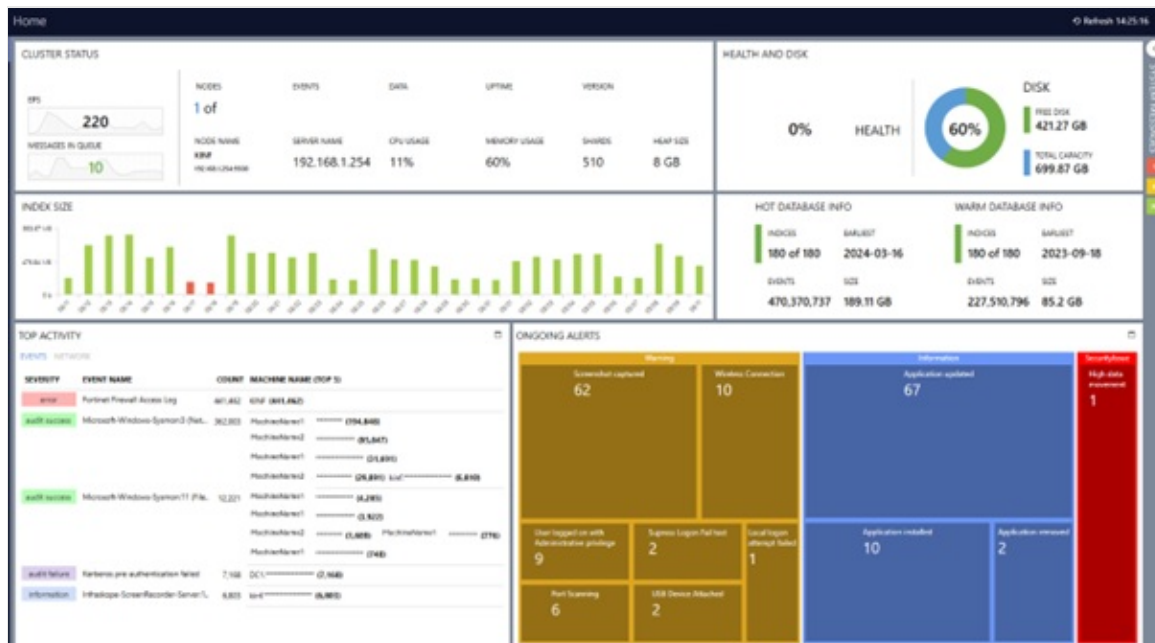

Menus	Function
Home	Used to display the home screen of DAM.
Search	Used to search events and export search results as xls or pdf .
Alerts	Used to view alerts in detail.
Dashboards	Used to view and edit dashboards.
Agents	Used to show Agents, Policies and Options tabs, and Refresh, New Agent, Edit, Delete, Actions (Export, Send as E-mail) and Open Terminal tasks.
Alert Rules	Used to show alert and correlation rules.
Mappings	Used to view, edit and manage mappings in detail.
Lookup List	Used to show Lookup Lists.
Settings	Used to reach Settings as Users, User Activities, Roles, API Users etc.
	Used to close and open the menu on the left. The menu part can be closed for a wider graphic view.
	Used to turn pop-up contents on or off.

	<p>Used to reach user details. Includes Logged On Users, My Profile and Logout submenus.</p>
	<p>Used to show Copyright, Version, Disclaimer, Product, Client and License information</p>
	<p>Used to check updates</p>
	<p>Used to refresh.</p>
	<p>Used to show System Errors (red), Warnings (yellow) and Messages (green). Details and content can be viewed with the () icon. The numbers in the colored boxes indicate the number of errors, warnings, and messages.</p>

1.5.1. Home

Performing an analysis of the current situation using a single screen facilitates efficient work management by enabling prompt actions to be executed. Accordingly, **Home** screen presents **Cluster Status**, **Health** and **Disk**, **Index Size**, **Database Info**, **Top Activity** and **Ongoing Alerts** analysis to the user.

1.5.1.1. Cluster Status

The panel containing information about ElasticSearch provides insights into the status of your system. The most important feature on this screen is the ability to monitor the performance of the machine where the SIEM product is currently installed in real-time.

- **Nodes** shows the number of shards in the database (determined based on the system size).
- **Events** shows the number of events in the database.
- **Data** shows the record size.
- **Uptime** shows the active time period of the system.
- **Version** shows database version number.
- **Node Name** shows the node name.
- **Server Name** shows the server's name.
- **CPU Usage** shows the CPU usage percentage.
- **Memory Usage** shows the memory usage percentage. The max value, is also given with the Memory Usage, shows the amount of memory allocated for ElasticSearch. In Figure 5, the max value for ElasticSearch is given as 3 GB max.
- **Shards** shows the number of the small unit where records are stored.
- **Heap Size** shows the amount of allocated RAM to the Elasticsearch mode.
- **EPS** shows the events per second.
- **Messages in Queue** shows the real-time incoming log count.

1.5.1.2. Health and Disk

This panel shows the information about cluster health and disk capacities.

- **Unallocated** shows the available unit count.
- **Total Shards** shows the number of the small unit where records are stored.
- **Free Disk** shows the remaining free space on the disk.
- **Total Capacity** shows the total disk capacity.

1.5.1.3. Index Size

This panel shows how many computers are sending logs, how many computers have DAM agent installed in Active Directory, and how many computers have not connected to the system for a long time . Index Size is the database index, it graphically shows the amount of logs written to the database. If the log amount is the expected (average) number, the bar is shown green , if it is more than or lower than expected, the bar is shown red.

1.5.1.4. Database Info

This panel shows the number of records and the amount of space they occupy in two separate databases categorized as HOT and WARM. Hot database keeps records for the specified number of days. In default, the number of days is given as 180 and it keeps records of the last 180 days. Warm database keeps a record of 180 days before hot database records.

HOT DATABASE INFO				WARM DATABASE INFO			
	INDICES	EARLIEST			INDICES	EARLIEST	
	180 of 180	2024-03-16			180 of 180	2023-09-18	
	EVENTS	SIZE			EVENTS	SIZE	
	470,388,139	189.12 GB			227,510,796	85.2 GB	

- Indices shows the number of days for real-time log retention.
- Earliest shows the start date of log collection.
- Events shows the number of events.
- Size shows the total size of the events.

1.5.1.5. Top Activity

This panel shows the events and network activities based on their importance level, with the ability to determine the number of top items to display.

Top Activity panel, which operates in sync with INDEX SIZE, potentially provides you with the most important information. It presents records sorted by the importance level, name, and quantity of the generated events. Additionally, it also provides information about which machine the respective events occurred on and how many instances occurred.

TOP ACTIVITY			
EVENTS NETWORK			
SEVERITY	EVENT NAME	COUNT	MACHINE NAME (TOP 5)
error	Fortinet Firewall Access Log	441,462	KINF (441,462)
audit success	Microsoft-Windows-Sysmon:3 (Net...	362,003	MachineName1 ***** (194,848)
			MachineName2 ***** (95,847)
			MachineName1 ***** (31,691)
			MachineName2 ***** (29,891) kinf ***** (6,810)
audit success	Microsoft-Windows-Sysmon:11 (File..	12,221	MachineName1 ***** (4,285)
			MachineName1 ***** (3,922)
			MachineName2 ***** (1,689) MachineName1 ***** (776)
			MachineName1 ***** (748)
audit failure	Kerberos pre-authentication failed	7,168	DC1 ***** (7,168)
information	Infraskope-ScreenRecorder-Serven1..	6,803	kinf ***** (6,803)

1.5.1.5.1. Events

- **Severity** shows the event type.
- **Event Name** shows the event description.
- **Count** shows the number of occurrences of the event.
- **Machine Name** shows the machine name where the event occurred.

1.5.1.6. Ongoing Alerts

This panel shows critical events occurring during the day. It also provides alarm rules that have been predefined or created according to the organization's needs on the monitor screen. Relevant alarms are color-coded based on the criteria of the events.

When clicked on the relevant alarm, user can view the details of the events that occurred in a new tab.

- **Warning** shows the warnings on clients.
- **Error** shows the unsuccessful attempts on clients.
- **Security Issue** shows the security breaches and vulnerabilities.
- **Information** shows the information of actions on clients.
- **Success** shows the successful actions.

1.5.2. Search

Search panel provides a search engine where user can examine event records in detail.

1.5.2.1. Search Panel

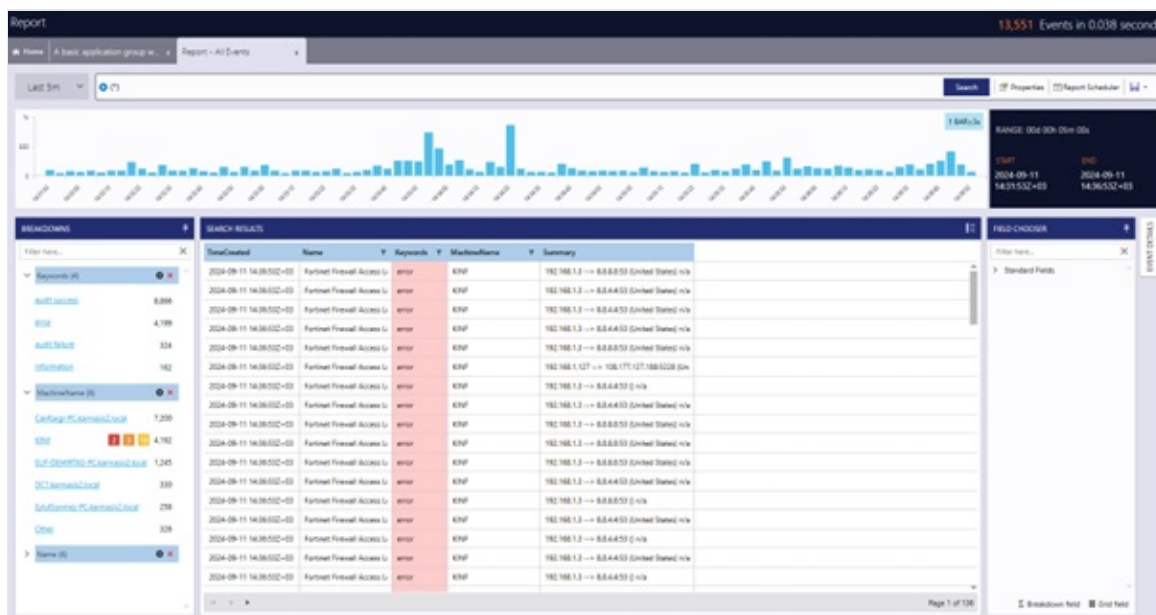

In this screen, user can run automatically generated queries by the system or create new queries to capture specific records. Users can select and search for different SearchDB clusters/seeds from Available Seeds options through a single Search UI.

SEARCH

Search here or filter predefined queries and reports...

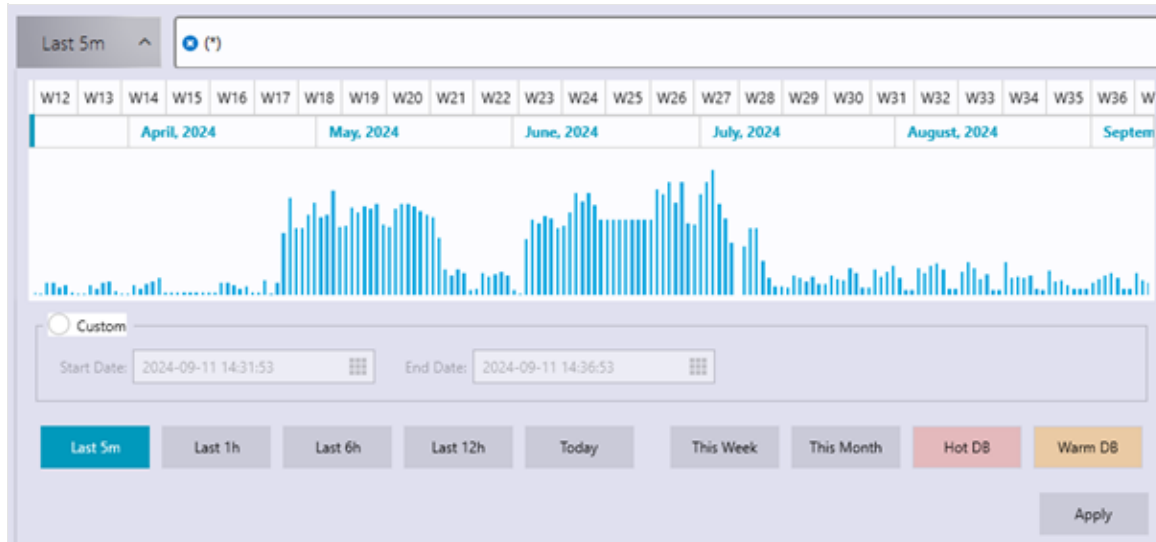

Search

Accordingly, the Search screen presents **Breakdowns**, **Search Results**, **Event Details** and **Field Chooser** to the user.

1.5.2.1.1. Date Range Section

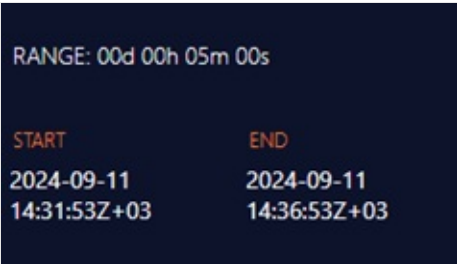

The date range section is automatically set to scan events that occurred within the last 5 minutes. Additionally, users can click on the relevant section to customize the date range according to their preferences.

Users can finalize their search by using the mouse to select the preferred time period on the chart. This empowers individuals to clearly define the precise time span they require. In the date range section, aside from the regular time intervals, there are choices labeled as Hot DB and Warm DB. Hot DB pertains to the initial 180 days, while Warm DB relates to the subsequent 180-day period. These choices enable individuals to conduct searches within both the currently active data and the archived data, all within the specific time spans they've chosen to search within the active and archived data for the specified time periods.

1.5.2.1.2. Range

Range Panel provides information about the time range for which the report was generated.

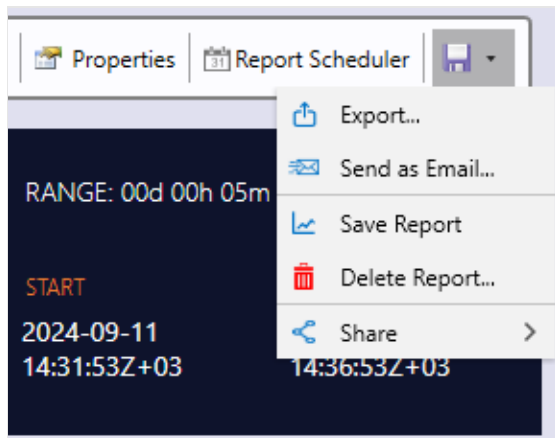

A screenshot of a dark-themed interface showing the 'Range' panel. At the top, it displays 'RANGE: 00d 00h 05m 00s'. Below this, there are two columns: 'START' and 'END'. The 'START' column shows the date and time '2024-09-11 14:31:53Z+03'. The 'END' column shows the date and time '2024-09-11 14:36:53Z+03'.

RANGE: 00d 00h 05m 00s	
START	END
2024-09-11 14:31:53Z+03	2024-09-11 14:36:53Z+03

1.5.2.1.3. Export and Save Actions

After completing the search, users can save the results as report or query, export them in Excel or PDF format, or send it via email by using the Save  button.

1.5.2.1.4. Field Chooser

The screenshot shows a search results table with columns: TimeCreated, Name, Keywords, MachineName, and Summary. The table contains 18 rows of data, all with 'error' in the Keywords column. To the right of the table is a 'FIELD CHOOSER' panel with a search filter and a list of 'Standard Fields'.

TimeCreated	Name	Keywords	MachineName	Summary
2024-09-11 14:36:53Z+00	Fortinet Firewall Access	error	KINF	192.168.1.3 -> 8.8.8.8 (United States) n/a

When the user right-clicks on any row in the Search Results table, the user can reach the actions given below.

- **Edit Summary:** Used to edit the summary.
- **Check Integrity [For All Events, For Selected Events]:** Used to check integrity for all events or selected events.
- **Add Drop Rule:** Used to add a drop rule.

- **Create Alert Rule:** Used to create an alert rule.
- **Find Related:** Used to find related query.

1.5.2.1.5. Historical Alert Processor

Users can select historical logs to correlate/create alerts with newly added rules. This feature provides the ability to re-process certain database activities based on newly added rules.

Schedule Properties

Users can select options and fill areas specific to their needs.

Note

When sending scheduled reports via email,

- Data used to generate reports is classified based on the classification feature associated with the role assigned to the recipients. This ensures that users only receive reports related to documents they are authorized to access.
- In case of an error the relevant log entry can be displayed in the System Messages section of the home page.

1.5.2.3. DAM Query Examples

String Queries

PURPOSE	QUERY
To search log entries starts with given character or word:	a* companyname*
To search log entries ends with given character or word:	*a *companyname
To search log entries that contain the given keyword:	Companyname
To search for log entries using a wildcard character to represent a portion of the keyword:	companyn?me
To search for a keyword with corrected spelling by allowing up to 2 characters of error:	cmpnyname~
To search for log entries that contain the keyword "companyname" and either "productname" or "applicationname":	companyname AND (productname OR applicationname) Alternatively, you can use the OR operator directly without parentheses: companyname productname OR companyname applicationname
These queries will retrieve log entries that meet the specified conditions. The "AND" operator ensures that the keyword "companyname" must be present in the log entries, while the "OR" operator provides flexibility by allowing either " productname" or " applicationname" to be present.	

Specific Field-Based Queries

PURPOSE	QUERY
To search a full text:	MachineName: "Companyname-PC" MachineName: 'Companyname-PC' MachineName: Companyname-PC

To search log entries starts with given character or word:	MachineName: Companyname* MachineName: a* c.
To search log entries ends with given character or word:	MachineName: *companyname b. MachineName: *a
To search for words with missing initial character(s), you can use the following examples:	MachineName: *companyname
To perform searches with restrictions on different fields, you can use the following syntax:	Keywords: (critical OR error) AND EventSource: 'productname' EventSource: 'productname' AND (Keywords: 'critical' OR Keywords: 'error')
To search for a word with potential spelling mistakes and allow for a certain degree of error tolerance, you can use fuzzy search or approximate matching. In DAM, user can utilize the tilde (~) operator to perform fuzzy searches.	EventSource: producme~ (Correct spelling is productname) EventSource: productme~ EventSource: proutname~ EventSource: prouctnae~
To perform searches with restrictions on a single field:	EventSource: 'productname OR OSname' EventSource: 'productname OSname' (Works in the same way with OR)
To perform a search using a specified range:	TimeCreated: '[Date to Date]' TimeCreated: '[* TO 2017-12-01] (Returns all dates before the specified date)
Search with sorting	EventID: >10 EventID: >=10 EventID: >= 500 AND EventID: <=1000 EventID: [500 TO 1000]

1.5.2.4. Regular Expression Queries

Regexp String Queries

PURPOSE	QUERY
To search for a constraint between two characters or words within a keyword, you can use regular expressions. Regular expressions allow for pattern matching and can help you specify constraints in your search query. Here are the examples you provided:	<code>/(P p)ro(ductname file)/</code> This regular expression pattern will match the word "Pro" followed by either "ductname" or "file". The "(P p)" part allows for variations in the capitalization of the letter "P"
	<code>/(p P)ro./</code> This regular expression pattern will match any word that starts with "pro" or "Pro" followed by any characters. The "(p P)" part allows for variations in the capitalization of the letter "P", and the "." represents any number of characters after "pro" or "Pro"
To search log entries start with a given character or word:	<code>/a.*/ /companyname.*/</code>
To search log entries ends with a given character or word:	<code>/.*a/ /.*companyname /</code>
To search for a keyword using wildcard characters, you can use the following symbols:	<code>/compa.../</code>
To search for numerical ranges, you can use the following syntax:	<code>/companyname/ /192.168.1./</code>
To search for minimum or maximum repeating words	<code>/a{2,4}/ /a{3}a{2}/ /companyname{3}/</code>
To search for minimum or maximum occurrences of a keyword, you can use the following examples:	<code>/c~e/</code> Words starting with 'c' and ending with 'e' <code>/co~e/</code> Words starting with 'c', followed by 'o', and ending with 'e'

Regexp Queries on Specific Fields

PURPOSE	QUERY
To search for a keyword with a limitation between two letters or words, you can use the following example:	EventSource: /(P p)ro(ductname file)/ /(p P)ro.*/
To search for records that start with a specific character or word, you can use the following examples:	MachineName: /a.*/ MachineName: /companyname.*/
To search for records that start with a specific character or word, you can use the following examples:	MachineName: /.a/ MachineName: /.companyname/
To search for any character occurring within a word, you can use wildcard characters. The most commonly used wildcard characters are:	EventSource: /Produ../
To search for numerical ranges, you can query for numbers within a specific range. You can use the following examples to specify a range:	EventID: // MachineName: /companyname/ (MachineName: /.companyname/ - The reason for this is the ability to perform term-based searches without requiring any specific word or character except for the one following the asterisk.
To search for a specific number of characters within a word, you can use the following wildcard characters:	MachineName: /[a-z]{2,4}/
To search for a range of values within a specific field:	MachineName: /p~e/ Words starting with 'p' and ending with 'e' MachineName: /pr~e/ Words starting with 'p', followed by 'r', and ending with 'e'

1.5.3. Alerts

The screenshot shows the 'Alerts' section of the software. At the top, there are filters for date ranges (2024-09-11 08:00:00 to 2024-09-11 23:59:59) and a search bar. Below this is a table of alerts with columns: Severity, State, Alert Time, Computer Name, Name, Suppress Count, and Message. The table lists several 'Warning' alerts with states like 'New' or 'Acknowledged'. Below the table, there is a section for 'Associated Events' which shows a detailed view of a specific event, including its source, category, and a list of related events.

Severity	State	Alert Time	Computer Name	Name	Suppress Count	Message
Warning	New	2024-09-11 14:52:12	DC3 *****	User account locked out	0	
Warning	New	2024-09-11 14:19:34	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
SecurityIssue	New	2024-09-11 14:16:03	HostedServer1	High data movement	0	Too many files copied to USB device
Warning	New	2024-09-11 14:15:59	HostedServer1	USB Device Attached	0

Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 13:58:07	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 13:58:07	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.
Warning	New	2024-09-11 13:58:07	HostedServer1	Screenshot captured	0	Screenshot is captured on HostedServer1 by 486.

- **Severity** shows the event type.
- **State** shows the action status of the event.
- **Alert Time** shows the date and time of the event occurrence.
- **Computer Name** shows the machine name where the event occurred.
- **Name** shows the event description.
- **Suppress Count** shows the number of suppressed events.
- **Message** shows the description.

Note
Users can specify a time frame that blocks thousands of alerts and actions by suppressing them, improving system manageability.

When users right-click on the listed alarm records, users see following menus:

The screenshot shows the same alert list as before, but with a right-click context menu open over the first row. The menu has several options: 'Change Resolution State...', 'Alert...', 'All...', 'Selected...', and a list of states: 'New', 'Acknowledged', 'Assigned To Helpdesk', 'Outsourced', and 'Resolved'.

Severity	State	Alert Time	Computer Name	Name
Warning	New	2024-09-11 14:52:12	DC3 *****	User account locked out
Warning	New	2024-09-11 14:19:34	HostedServer1	Screenshot captured
SecurityIssue	New	2024-09-11 14:16:03	HostedServer1	High data movement
Warning	New	2024-09-11 14:15:59	HostedServer1	USB Device Attached
Warning	New	2024-09-11 14:12:01	HostedServer1	USB Device Attached
Warning	New	2024-09-11 14:06:17	HostedServer1	Screenshot captured

Change Resolution State Menu:

- **All:** Allows you to change the resolution state for all records.
 - **New:** Indicates a newly received alarm.
 - **Acknowledged:** Indicates that the alarm has been reviewed and acknowledged by the authorized person.
 - **Assigned to Helpdesk:** Indicates the assignment of the alarm to the helpdesk team.
 - **Outsourced:** Indicates the outsourcing of the alarm to external service providers.
 - **Resolved:** Indicates that action has been taken regarding the alarm and it has been resolved.
- **Alert:**
 - **Selected:** Allows you to change the alert state only for the selected records.
 - **Go to Related Alert:** Provides information about the alarm rule under which the record was generated.
 - **Disable:** Allows you to disable the alarm rule according to your preference.

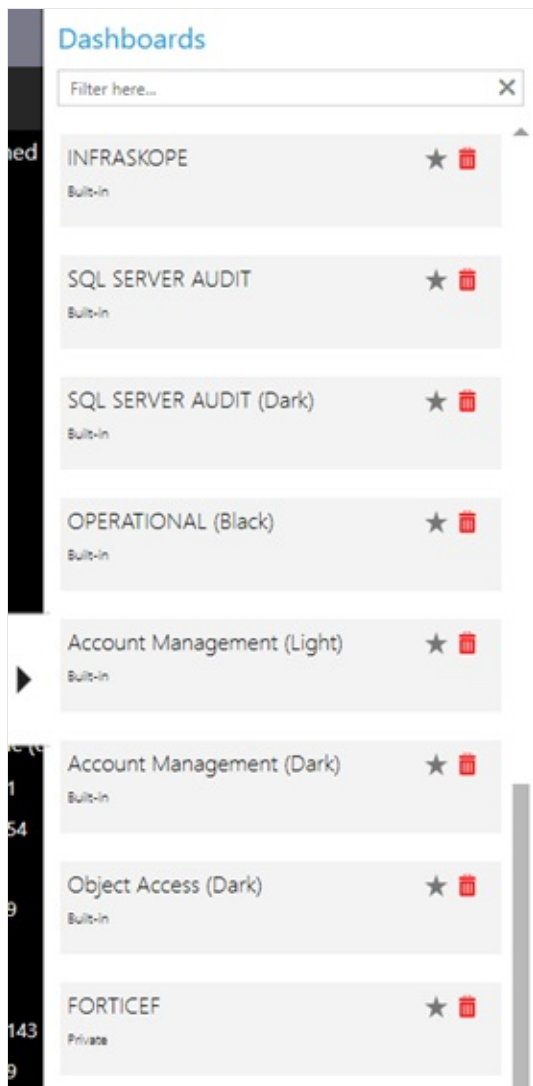

1.5.4. Dashboard

Dashboard menu is used to visually monitor critical events that are important for organization without the need for any specific reports. It allows users to create a customized dashboard with graphical representations of the events.

Sliding Dashboard Panel

To open the sliding panel and view all dashboard designs, click on arrow.

In the sliding panel, users can select their favourite dashboard designs and take them to the top by clicking  icon.

When users want to delete one of the dashboard designs, they can click on the  icon.

If users want to find the dashboard design they want by typing its name instead of scrolling, they can use the **Filter here**.

x

Controls	Function
Edit	Used to edit the dashboard.
Full Screen	Used to display the dashboard full screen.
Refresh	Used to refresh the dashboard.

Share	Used to share the dashboard with internal users.
Actions	Used to reach various actions related to the dashboard. Includes Edit , Delete , Bookmark , Rename , New Dashboard [Blank Dashboard, Copy From Existing] , Import and Export .

1.5.4.1. Edit Dashboard

When the **Edit** mode is enabled, 4 new tabs appear at the top as **File**, **Design**, **Themes** and **Options**.

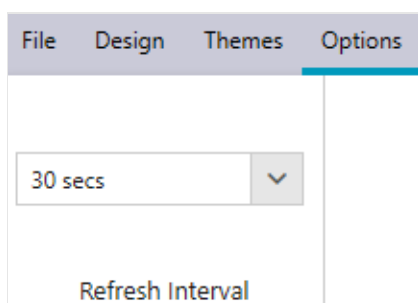

The **File** tab is used for **Save**, **Delete**, **Rename** and **Bookmark** operations.

The **Design** tab is used for **Format Painter**, **Insert Widgets (Value, Pie, Bar, Column, Timeline, Treemap, Map, Data Grid, Text, Image)**, **Align**, **Undo** and **Redo** operations.

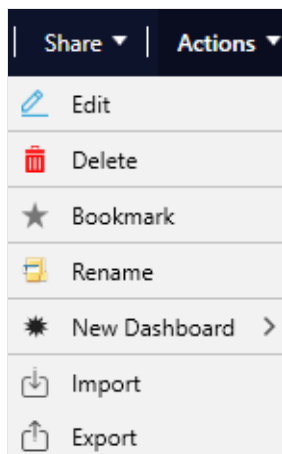

The **Themes** tab offers various **Theme Designs**. It also provides separate customization opportunities for **Background**, **Widget Caption**, **Widget Area**, **Widget Border** and **Chart Formatting**.

The **Options** tab allows user to change the **Refresh Interval** value.

After the editing process is completed, the user saves the changes using the **Save** button on the top left. If users want to close the changes without saving, they use the **Cancel** button.

1.5.4.2. Actions

- **Edit:** Used to edit the dashboard.
- **Delete:** Used to delete the dashboard.
- **Bookmark:** Used to take the dashboard to the top in the sliding dashboard panel. Its function is the same as to star in a sliding dashboard panel.
- **Rename:** Used to rename the dashboard.
- **New Dashboard [Blank Dashboard, Copy From Existing]:** Used to add new dashboard from blank one or copy from existing.
- **Import:** Used to import a design template that previously exported from another machine using the saved file.
- **Export:** Used to export the dashboard design.

Creating a New Dashboard

Users can create a new dashboard according to their needs and track all activities through charts in real time.

To create a new dashboard,

1. Click **Actions > New Dashboard > Blank Dashboard**.
2. In the New Dashboard window, enter the Dashboard name and description.
3. Choose a theme for the new dashboard and press the **OK** button.

New Dashboard

Please provide a new name for the new dashboard:

1.5.5. Agents

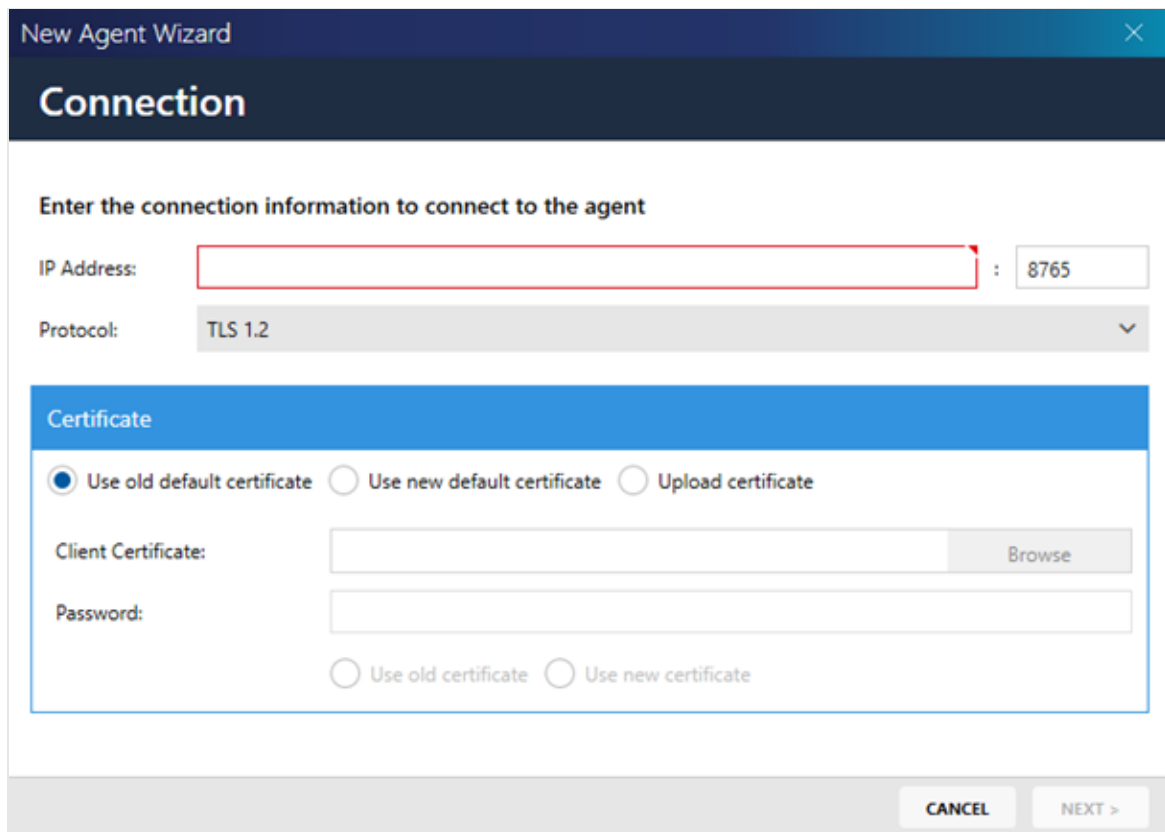

Agents Menu allows you to manage, monitor, and configure your agents. It consists of panels where users can define and modify settings for the agents installed on client machines With **Agents**, **Policies**, and **Options** tabs.

- Add, delete, and edit agents through this interface.
- Modify agent policies and update certificates.
- Oversee a detailed monitoring process and read agent metrics with the Real-time Diagnostics tool.
- Instantly intervene when the status of online agents changes.
- Observe agent updates and access information about machines.
- Group your agents for monitoring purposes with the categorization feature.

Adding a New Agent

1. To add a new agent, click on **New Agent** button.
2. In the opened **New Agents Wizard** window, enter the **IP Address** of the machine where the agent is installed, and choose the appropriate **Protocol**. If necessary, you can use the sub-panel to upload certificates.
3. Click **Next**.

1.5.6. Alert Rules

Controls	Function
New Category	Used to add new category about alert rules.
Refresh	Used to refresh alert rules.
New	Used to add new alert rule.
Edit	Used to edit the alert rule.
Delete	Used to delete the alert rule.

Column Details

- **Enabled** shows the enabled or disabled status.
- **Severity** shows the type of the alert.
- **Name** shows the alert name/description.
- **Update Date** shows the date and time of the alert.
- **Contains in Keyword** shows whether it contains the specific keyword or not.

1.5.6.1. Adding New Alert Rule

To add a new alert rule, click the **New** button on **Alert Rules** menu and follow the steps given below.

1. Enter the **Pattern Name** in the opened **Pattern Editor**.
2. Select the **Severity** and **Category** options.
3. Select and fill the other pattern options related with time, matching and parameters if necessary.
4. Click **Add Rule** button and select the **Alert Rule Type** [**Generic Rule**, **Missed Rule**, **Multi-hit Rule**].
5. Follow the steps for selected **Alert Rule Type**.
6. Click the **OK** button to add the created alert rule.

The screenshot shows the 'Pattern Editor' dialog box with the 'New Pattern' tab selected. The 'Name' field contains 'New Pattern'. The 'Severity' is set to 'Warning' and the 'Category' is 'Real Time Alerts'. The 'Enabled' checkbox is checked. There are two time-related options: 'All rules must occur within' (00:00:05) and 'Activity' (00:00:00 to 23:59:59). There are also suppression options: 'Suppress all subsequent matches for' (00:00:00) and 'Suppress by event params' (Event params to include). Below these options is a table with columns 'Name', 'Type', and 'Description'. The 'Add Rule' button is open, showing three options: 'Generic Rule' (Respond to a single event), 'Missed Rule' (Respond to an event that does not happen within given interval), and 'Multi-hit Rule' (Respond to an event that will occur more than N times within given interval). The 'OK' and 'CANCEL' buttons are at the bottom right.

1.5.6.1.1. Generic Rule

Generic Rule type is used to respond to a single event. User must enter the **Name**, **Criteria**, **Correlation Key**, and **Description** fields to add a generic alert rule in **Rule Editor** window. Users can see **Criteria Helper** by clicking ? icon.

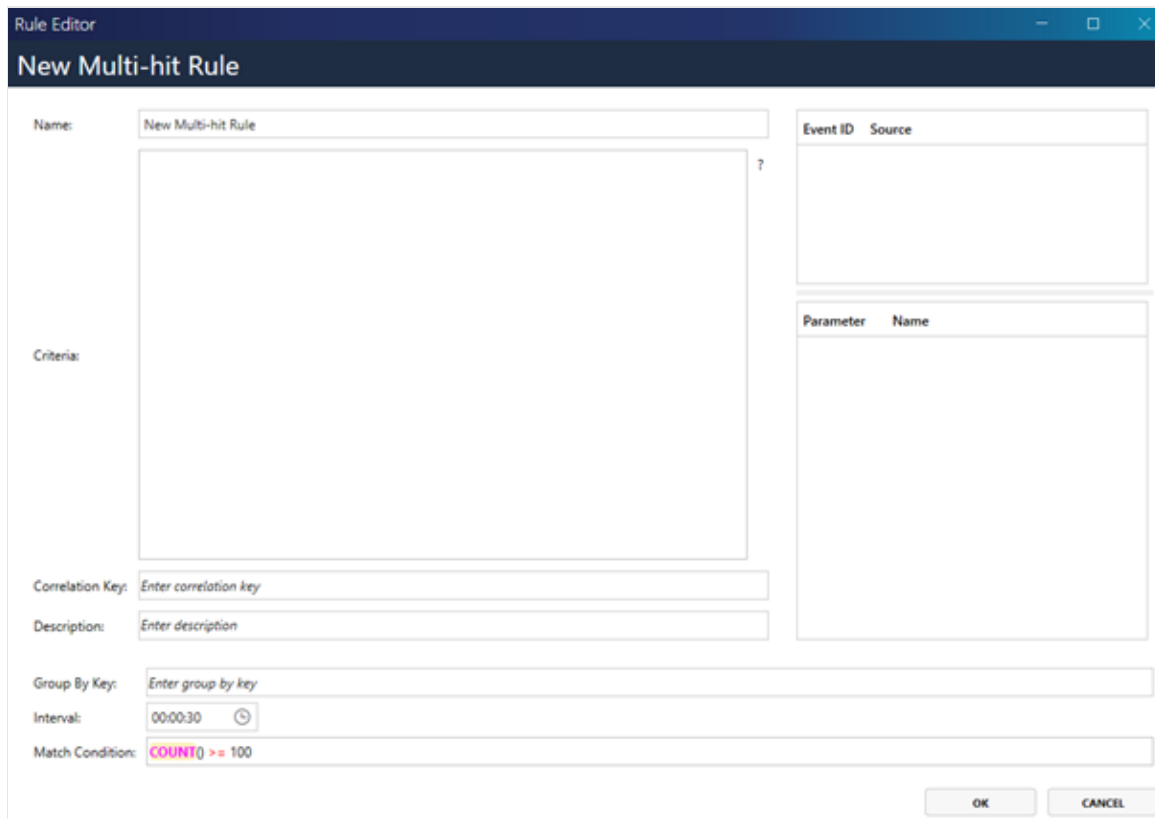

1.5.6.1.2. Missed Rule

Missed Rule type is used to respond to an event that does not happen within given interval. User must enter the **Name**, **Criteria**, **Correlation Key**, **Description**, **From**, **To** and **Interval** fields to add a missed alert rule in **Rule Editor** window.

The screenshot shows the 'Rule Editor' window with a 'New Missed Rule' dialog box. The dialog has a dark blue header with the title 'New Missed Rule'. Below the header, there are several input fields and tables. The 'Name' field contains 'New Missed Rule'. The 'Criteria' field is a large text area. The 'Correlation Key' field contains 'Enter correlation key'. The 'Description' field contains 'Enter description'. The 'From' field contains '00:00:00', the 'To' field contains '00:00:00', and the 'Interval' field contains '00:01:00'. There are two tables on the right side of the dialog. The first table has columns 'Event ID' and 'Source'. The second table has columns 'Parameter' and 'Name'. At the bottom right of the dialog are 'OK' and 'CANCEL' buttons.

1.5.6.1.3. Multi-hit Rule

Multi-hit Rule type is used to respond to an event that will occur more than N times within given interval. User must enter the **Name**, **Criteria**, **Correlation Key**, **Description**, **Group By Key**, **Interval**, and **Match Condition** fields to add a multi-hit alert rule in **Rule Editor** window.

The screenshot shows the 'Rule Editor' window with the title 'New Multi-hit Rule'. The interface includes several input fields and tables for configuring the rule.

Name: New Multi-hit Rule

Criteria: [Empty text area]

Correlation Key: Enter correlation key

Description: Enter description

Group By Key: Enter group by key

Interval: 00:00:30

Match Condition: COUNT() >= 100

On the right side, there are two empty tables:

Event ID	Source

Parameter	Name

At the bottom right, there are 'OK' and 'CANCEL' buttons.

1.5.7. Mappings

Controls	Function
New Category	Used to add new category about mappings.
Refresh	Used to refresh mappings.
New	Used to add new mapping.
Edit	Used to edit the mapping.
Delete	Used to delete the mapping.

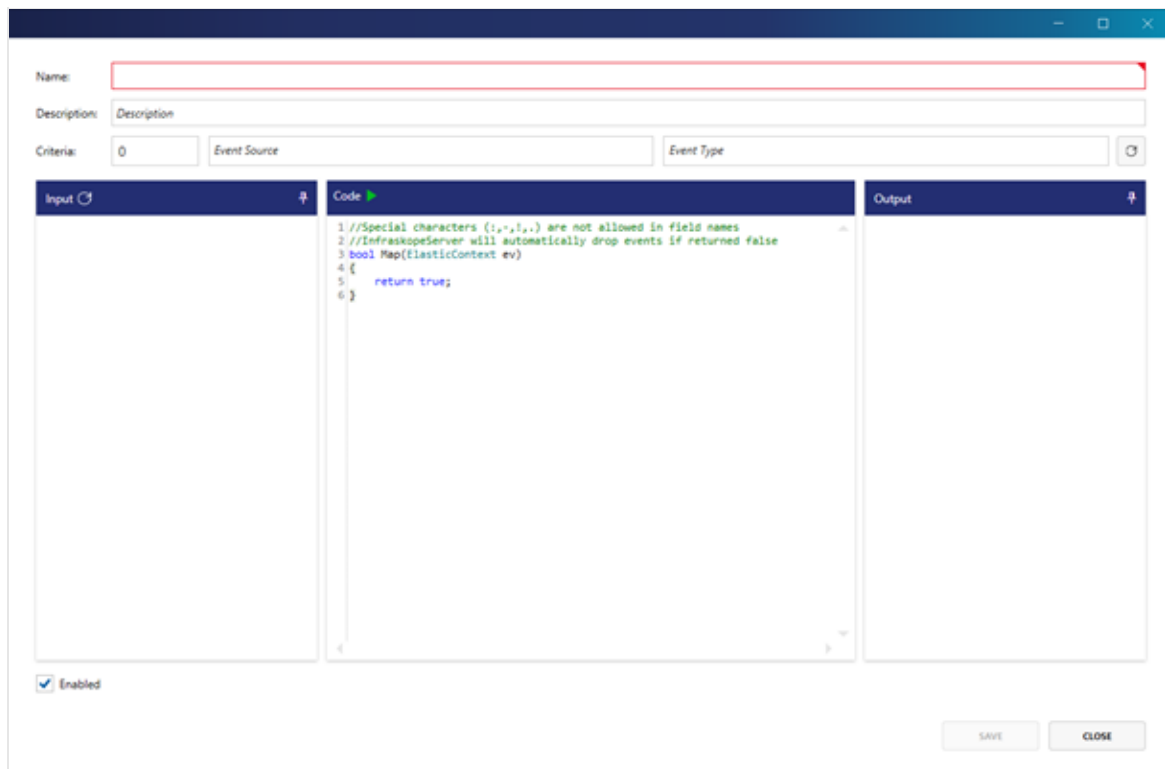

Column Details

- **Enabled** shows the enabled or disabled status.
- **Name** shows the mapping name.
- **Description** shows the mapping description.
- **Event Source** shows the event source about mappings.
- **Event ID** shows the event ID about mappings.
- **Event Type** shows the event type about mappings.

1.5.7.1. Add New Mappings

To add a new mapping, click New from the **Mapping** menu.

1. Enter **Mapping Name**.
2. Enter **Description**.
3. Fill in the **Criteria**, **Events Source** and **Event Type** sections.
4. Complete the **Input**, **Code** and **Output** sections as appropriate.

The screenshot shows a 'New Mapping' dialog box with the following fields and sections:

- Name:** A text input field with a red border.
- Description:** A text input field containing the placeholder text 'Description'.
- Criteria:** A section containing three input fields: '0', 'Event Source', and 'Event Type'. The 'Event Type' field has a refresh icon to its right.
- Input:** A tabbed section on the left, currently empty.
- Code:** A central text area containing the following C# code:

```
1 //Special characters (.,-,.,) are not allowed in field names
2 //InfraskopeServer will automatically drop events if returned false
3 bool Map(ElasticContext ev)
4 {
5     return true;
6 }
```
- Output:** A tabbed section on the right, currently empty.
- Enabled:** A checkbox at the bottom left, which is checked and labeled 'Enabled'.
- Buttons:** 'SAVE' and 'CLOSE' buttons at the bottom right.

1.5.8. Lookup Lists

Lists that are used to modify the outputs of goals and are specifically tailored to the situation. These lists customize the outputs of goals, thereby increasing the accuracy of the outputs.

Purpose of use

- Adding lists to queries and reports on the search page.
- Adding lists to the alarm rules.
- Adding lists to Dataskope policies.
- Adding lists specific to the database.
- Adding lists specific to LDAP.

List Types

- Static List: Used to add lists to Search queries, Search reports, and Alarm rules.
- Dataskope List: Used to add lists to Dataskope policies.
- Database List: Used to customize database outputs.
- LDAP List: Used to customize LDAP outputs.

The screenshot displays the 'Lookup Lists' configuration page. On the left, a sidebar shows a tree view of various list categories: All Lists, Database Lists, LDAP Lists, Static Lists, and New Category. The 'Admin Users' list is selected under the 'Static Lists' category. The main panel shows the configuration for 'Admin Users', which is a 'Static' list. Fields include 'Name' (Admin Users), 'Alias' (admins), and a description 'Change the following according to your needs'. A table lists 'Value Columns' and 'Values' for 'administrator', 'future', 'manager', and 'future'. A 'Click here to add new item' link is present. At the bottom, there are 'SAVE' and 'CANCEL' buttons.

Clicking the Save button after each change to the list disables the automatic submission process, giving users the option to submit their modifications directly.

To activate this new change, click the **Commit**.

The screenshot displays the 'Lookout Lists' management interface. On the left, a sidebar lists various categories: All Lists, Database Lists, Data Lists, Hosts, OSINT Lists, Static Lists, and Threat Intelligence. Under 'Data Lists', the 'DataHost' list is selected and highlighted. The main panel shows the configuration for 'DataHost', which is identified as a 'List Type: Databridge'. A yellow banner at the top of the main panel instructs the user: 'To send the updates you made to the lookout list in Databridge to the agent, press the "Commit" button.' The configuration fields include:

- Name:** DataHost
- Alias:** A text input field containing 'data' and a tooltip that reads 'Specify unique prefix in @Hosts'.
- Description:** A text input field containing 'Enter a short description'.
- Value Columns:** A text input field containing 'value'.
- Index:** A dropdown menu currently set to 'Y'.
- Item1:** An empty text input field.
- Item2:** An empty text input field.

 At the bottom of the configuration area, there is a blue link that says 'Click here to add new item'.

Note

Lookup List items can be easily moved among their relevant categories enabling users to efficiently and swiftly reorganize items within the category structure, making list management more flexible.

1.5.9. Settings

Ref.	Controls	Function
	Users	Used to create, update, and delete users.
	User Activities	Used to view user activities.
	Roles	Used to create, update, and delete roles.
	API Users	Used to create, update, and delete API Users.
	Security	Used to change security settings.
	Notification Groups	Used to create, update, and delete notification groups.
	Storage	Used to change database settings.
	System Notification	Used to create and delete system notification users.
	SMTP Server	Used to change SMTP server settings.

	LDAP Server	Used to change LDAP server settings.									
	Action Account	Used to reach account information by DAM agents.									
	Alert Forwarding	Used to change alert forwarding settings.									
	Distributed Platform	Used to create, update, and delete distributed platform settings.									
	Multi-Tenant Mapping	Used to create, update, and delete multi-tenant mappings.									
<p>DAM Mapping</p> <p>↻ Refresh + New... ✎ Edit... 🗑 Delete...</p> <table> <thead> <tr> <th>Enabled</th> <th>Name</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><input checked="" type="checkbox"/></td> <td>dataskope mapping 3</td> <td></td> </tr> <tr> <td><input checked="" type="checkbox"/></td> <td>dataskope test 12</td> <td></td> </tr> </tbody> </table>	Enabled	Name	Description	<input checked="" type="checkbox"/>	dataskope mapping 3		<input checked="" type="checkbox"/>	dataskope test 12		VDAM Mapping	Used to create, update and delete VDM Mappings
Enabled	Name	Description									
<input checked="" type="checkbox"/>	dataskope mapping 3										
<input checked="" type="checkbox"/>	dataskope test 12										
	OpenVAS Account	Used to OpenVAS API connection management.									
	File Servers	Used to create or delete file server.									
	All Settings	Used to create, update, and delete DAM registry settings.									

1.5.9.1. User Settings

This setting is used to show the existing users and allows to perform editing, deletion, and addition operations.

1.5.9.1.1. Adding New User

Click **New** to add a new user and update the login information.

The image displays three sequential screenshots of the 'New User' configuration window, illustrating the steps to add a new user.

- First Screenshot (General Tab):** Shows the 'User Information' section with fields for Name, Email, Mobile Phone, and SMS Number. Below this is the 'Account Information' section with fields for User Name and checkboxes for 'Active', 'Expires on', and 'Use Database'. The 'Authentication' section includes a 'Set Random Password' link, 'Password' and 'Confirm Password' fields, and a checkbox for 'Should change password on next login'. The 'User Inactivity' section has a checkbox for 'Inactivity Logout'. 'SAVE' and 'CANCEL' buttons are at the bottom.
- Second Screenshot (Roles Tab):** Shows a list of roles with checkboxes. The 'Users' role is selected. Other roles include Database, TestDefault, Database Group, Sales, INTERM, Web API, TestUser, Read-Only User, Company1, Company2, Company3, Admin Role Test, Test, BDM TEST - ADMIN ROLE, and BDM TEST - USER ROLE. 'SAVE' and 'CANCEL' buttons are at the bottom.
- Third Screenshot (Notification Groups Tab):** Shows a list of notification groups with checkboxes. The 'DefaultOps' group is selected. Other groups include Security Ops, User, Test, MWSIG Ops, Test, Dev, Dev2, BDM TEST, and Schedule Test Group. 'SAVE' and 'CANCEL' buttons are at the bottom.

1.5.9.2. User Activities Settings

This setting is used to show user activities and allows to export the actions of permitted users in JSON format within specific date ranges.

1.5.9.3.1. Adding a New Role

This is used to customize the access scope as desired when adding a new role.

To add a New role, click New button on the **Roles Settings**.

1. Enter the **Role Name**.
2. Enter the **Description**.
3. Check **Assign to new users as default** if necessary.
4. In **UI ACCESS**, turn **On** the actions that users of this role want to be authorized for.

The screenshot shows the 'New Role' dialog box with the 'UI ACCESS' tab selected. The 'Name' field is empty and highlighted with a red border. The 'Description' field is also empty. The checkbox 'Assign to new users as default' is unchecked. Below the fields, there are tabs for 'UI ACCESS', 'UI ACCESS MEMBERS', 'API ACCESS', and 'API ACCESS MEMBERS'. The 'UI ACCESS' tab is active, displaying a list of system components with toggle switches to the right. The components and their toggle states are: Home (Off), Search (Off), Alerts (Off), Dashboards (Off), Agents (Off), Alert Rules (Off), Mappings (Off), Lookup Lists (Off), and Settings (Off). At the bottom right, there are 'SAVE' and 'CANCEL' buttons.

5. In **UI ACCESS MEMBERS**, select the users you want to have in this role.

The screenshot shows the 'New Role' dialog box with the 'UI ACCESS MEMBERS' tab selected. The 'Name' field is empty and highlighted with a red border. The 'Description' field is also empty. The checkbox 'Assign to new users as default' is unchecked. Below the fields, there are tabs for 'UI ACCESS', 'UI ACCESS MEMBERS', 'API ACCESS', and 'API ACCESS MEMBERS'. The 'UI ACCESS MEMBERS' tab is active, displaying a list of users with checkboxes to the left. The users listed are: Ali Elsamli, Can Çepur, can kargı, Company1, Company2, Company3, Database Audit Admin, Gökhan KARA, Hakkı Dursun, Hasan, Log Admin, Mark Topçu, Merve Fırat, Murat Enayit (AD), mureycaylan, Publisher Operator, Saçın Altınkaya, SİEM Test, STM, and KTD. At the bottom right, there are 'SAVE' and 'CANCEL' buttons.

6. In **API Access** tab, configure permissions for accessing public endpoints.

7. In **API Access Members** tab, select the API Users assigned to that role.

8. In **CLASSIFICATION CRITERIA**, check **Activate Classification** if necessary.

9. Select **Field Queries** or **Raw Query String** and complete the relevant details.

1.5.9.10. LDAP Server Settings

The server information related to users' LDAP services can be entered on this screen.

LDAP Server

LDAP Server

LDAP Server:

Example:

IP / Host Sub OU (Optional) Parent OU (Optional) Domain Name

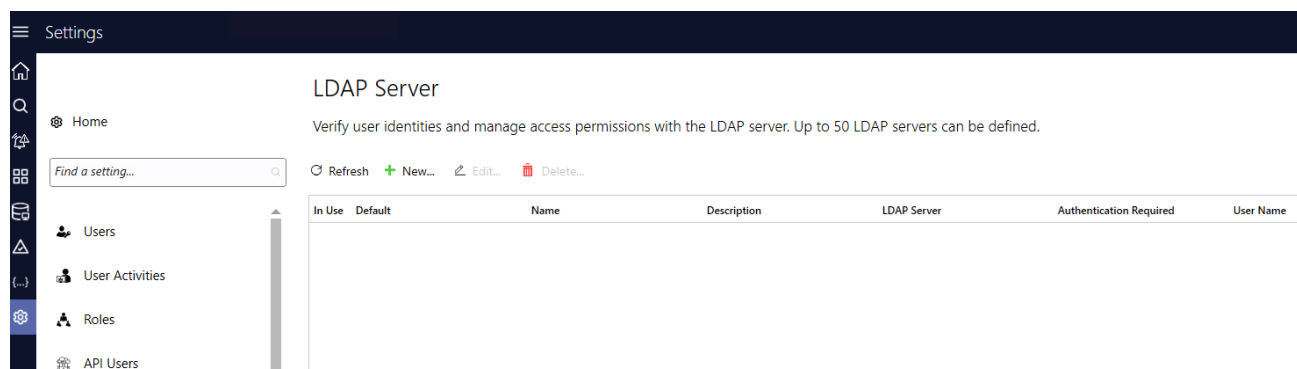

Authentication Settings

☒ Authentication Required

User Name:

Password:

Users can define multiple LDAP servers in the **LDAP Server** lookup lists.

This allows you to connect to several LDAP servers simultaneously or in a specific sequence using a task created through the Windows Task Scheduler. Relevant queries can be executed, and this will automatically add the results to the Lookup Lists. The connection status and other relevant details for the added LDAP servers can be viewed.

This approach simplifies the aggregation and maintenance of data from various sources under a single framework. Additionally, it provides flexibility in high availability and redundancy scenarios; if access to one LDAP server is unavailable, other servers can take over to ensure continuity of the queries.

1.5.9.11. Action Account Settings

Domain Name, User Name and Password details of the action account can be entered on this screen.

Action Account

Domain Name:

User Name:

Password:

1.5.9.12. Alert Forwarding Settings

This setting can be used to redirect alarms to another domain.

Alert Forwarding

DAM can send desired alerts to parent site. Please enter necessary information if you want this functionality. Consult your network administrator to find out Parent Site Name value.

☒ Enable Alert Forwarding

Site Name (Active Directory):

Parent Site Name (Active Directory):

Forward Alerts On

☐ Monday ☐ Tuesday ☐ Wednesday ☐ Thursday ☐ Friday ☐ Saturday ☐ Sunday

1.5.10. Changing Company Logo

To change the company logo:

The screenshot shows the OpenText Settings application interface. On the left is a sidebar with navigation icons and a list of settings categories: Home, Users, User Activities, Roles, API Users, Security, Notification Groups, Storage, System Notification, SMTP Server, LDAP Servers, Action Account, and Alert Forwarding. The main area is titled 'All Settings' and contains a warning: 'WARNING: DO NOT CHANGE THESE PROPERTIES WITHOUT CONSULTING OPENTEXT SUPPORT.' Below the warning are buttons for Refresh, New..., Edit..., and Delete... The settings are organized into sections, and the 'Section: Reports' is expanded. Within this section, the 'CorporateLogoPath' setting is highlighted. A 'Setting Editor' dialog box is open, displaying the 'Section: Reports' and 'Name: CorporateLogoPath'. The 'Logo Location' field is empty, and the 'Browse' button is visible. The 'Save' and 'Cancel' buttons are at the bottom of the dialog.

1. Click **CorporateLogoPath** under the **Section:Reports**.
2. Click **Browse** to the location to select the logo.
3. Click **Save**.
