Legacy Patch Feed vs. Advanced Patch Feed

ZENworks 2020 Update 3 introduced the next generation of ZENworks Patch Management, including a new patch feed, referred to as the Advanced Patch feed. This document describes the patch content that is available in the **Legacy Patch feed** for those customers who have not yet switched to the Advanced Patch feed. For information about the patch content available in the Advanced Patch feed, see the [ZENworks Patch Management Content Report for the Advanced Patch Feed](#) document.

Operating System (Platform) Support

ZENworks Patch Management currently supports updates for the operating systems listed in Table 1. Support is defined as follows:

- Update installers (no base installers)
- Core OS updates (may include patches, service packs, security updates, quality updates, cumulative updates, and hotfixes)
- Stated versions, editions, and architecture only (Note: versions typically reflect the vendor's currently supported versions; patches for versions no longer supported by a vendor may still be available)

IMPORTANT: The following table lists all operating system versions for which patches are available in the Legacy Patch feed. Please be aware that ZENworks Patch Management, regardless of what is shown below, can only patch operating system versions that are officially supported as managed devices in your installed ZENworks release. If you have an older version of ZENworks, this list might include operating systems that cannot be patched by your version. We encourage all customers to be on the newest version of ZENworks in order to take full advantage of operating system patching.

Items shaded in **grey** are legacy operating systems that are no longer supported by the original vendor on an ongoing basis, but previously-released patches may still be available in the patch feed. Text in **green** represents additions to this report since its last release.

Table 1: Operating System Support

Vendor	Operating System Version	Edition	Architecture
Apple	macOS 12.x		Intel (x86_64)
	macOS 11.x		Intel (x86_64)
	macOS 10.15		Intel (x86_64)
	macOS 10.12 – 10.14		Intel (x86_64)
	Mac OS X 10.11		Intel (x86_64)
	Mac OS X 10.7.4 - 10.10		Intel (x86_64)
	Microsoft	*Windows 11 Version 21H2, 22H2	PRO, ENT, EDU

*Windows 10 Version 1507, 1511, 1607, 1703, 1709, 1803, 1809, 1903, 1909, 2004, 20H2, 21H1, 21H2, 22H1, 22H2	PRO, ENT, EDU, LTSC	x86, x86_64
Windows 8.1	PRO, ENT	X86, x86_64
Windows Embedded Standard 7		x86, x86_64

SUSE		
SUSE Linux Enterprise 15 – 15 SP4	Server, Desktop	x86_64
SUSE Linux Enterprise 12 – 12 SP5	Server, Desktop	x86_64
SUSE Linux Enterprise 11 – 11 SP4	Server, Desktop	x86, x86_64
Red Hat		
Enterprise Linux 8.0 – 8.6	Server, Desktop	x86_64
Enterprise Linux 7.2 - 7.9	Server, Desktop	x86_64
Enterprise Linux 6.8 - 6.10	Server, Desktop	x86, x86_64
Enterprise Linux 5.11 (by request only)	Server, Desktop	x86, x86_64

*The listed versions represent the Windows 10 and 11 versions officially supported as managed devices in the current ZENworks release. However, ZENworks adds patches for new Windows 10 and 11 versions as soon as the patches become available, even if the version is not yet officially supported as a ZENworks managed device.

Windows Application Support

ZENworks Patch Management currently supports updates for the Windows applications listed in the table below. The applications must be running on one of the supported Windows operating systems listed in [Operating System \(Platform\) Support](#).

If ZENworks Patch Management does not support the content you want, you can enter a request in the [Ideas](#) portal. Requests are evaluated on multiple criteria, including the general availability of the update from the vendor and the overall popularity of the application. Priority and implementation of a request is not guaranteed. Text in **green** represents additions to this report since its last release.

macOS Application Support

ZENworks Patch Management currently supports updates for the macOS applications listed in the table below. The applications must be running on one of the supported macOS operating systems listed in [Operating System \(Platform\) Support](#).

If ZENworks Patch Management does not support the content you want, you can enter a request in the [Ideas](#) portal. Requests are evaluated on multiple criteria, including the general availability of the update from the vendor and the overall popularity of the application. Priority and implementation of a request is not guaranteed.

Text in green represents additions to this report since its last release.

Table 3: macOS Application Support

AntiVirus Definition Support

ZENworks Patch Management has discontinued the distribution of AV definition files. With AV vendors releasing updates daily, hourly, and sometimes even more frequently, our release cadence of twice weekly left significant gaps in AV protection. We strongly encourage customers to use their AV product's native update feature to keep their AV definitions up to date.

In most cases, you will continue to see previously supported AV vendors (and patches) listed in ZENworks Patch Management. Our policy is to not risk impacting customers by removing existing patches from the content feed until we are sure the patches are obsolete (see [Patch Content End-of-Life Policy](#)). However, you should not see new AV patches in the future.

Language Support

For Windows operating system (OS) applications, ZENworks Patch Management supports patch content for the following locales if available from the vendor.

Table 5: Patch Content Language Support

Language (Locale)			
Chinese (Hong Kong)	English (United States)	Italian (Italy)	Portuguese (Brazil)
Chinese (Simplified)	Finnish (Finland)	Japanese (Japan)	Portuguese (Portugal)
Chinese (Traditional)	French (France)	Korean (Korea)	Russian (Russia)
Czech (Czech Republic)	German (Germany)	Norwegian (Norway)	Spanish (Spain)
Danish (Denmark)	Hungarian (Hungary)	Polish (Poland)	Swedish (Sweden)
Dutch (Netherlands)			

Patch Content Types and Mapping

Each software vendor has its own way of classifying the level of need for an endpoint to have content deployed and installed. Vendors use labels such as "Critical," "Important," and "Moderate" to help describe how crucial their content is for securing your environment. But what if each vendor has a different definition of "Critical" or "Important?" It can be challenging to evaluate your environment's security posture accurately if you are relying on labels that vary from vendor to vendor.

To address this confusion, ZENworks Patch Management replaces the vendor classification labels with our own. We call these labels *content types* and apply them to content from all vendors. Why? Because a standardized classification system helps you quickly identify the most crucial content needed to secure your endpoints, *without* having to look up each vendor's label individually. Here are descriptions of our main content types:

Table 6: Patch Content Types

Content Type	Description
Critical	These content items are critical and should be installed as soon as possible. Most of the recent security updates fall into this category.
Recommended	These content items, while <i>not</i> critical or security-related, are useful and should be applied to maintain the health of your endpoints.

Table 7: Patch Content Type Mapping

Vendor	Vendor Content Category	ZENworks Patch Management Content Type
Apple	Mac Platform Security Updates	Critical
	Application Security Updates	Critical
	Non-Security Mac Platform Updates	Recommended
	Non-Security Mac Application Updates	Recommended
Microsoft	Platform Security Updates	Critical
	Application Security Updates	Critical
	Non-Security Platform Updates	Recommended
	Non-Security Application Updates	Recommended
	Platform Hotfix	Recommended
	Application Hotfix	Recommended
	Platform Service Packs	Critical
	Application Service Packs	Critical
	ActiveX Killbits	Recommended
	Junk Email Filter Updates	Recommended
Red Hat EL	Platform Security (RHSA)	Critical
	Enhancements (RHEA)	Recommended
	Platform Bugfix (RHBA)	Recommended

Vendor	Vendor Content Category	ZENworks Patch Management Content Type
SUSE Linux	Security Updates	Critical
	Non-Security Updates	Recommended
	Service Packs	Critical

Patch Content End-of-Life Policy

We remove content from the Content Repository once it's obsolete. The following policies determine when content is considered obsolete and may be removed.

Operating System Patches

Patch content for operating systems is removed:

- Two years after the support pack or Long Term Servicing Branch (LTSB) is at end-of-life, or
- Five years after the vendor reports end-of-life for the operating system.

Application Patches

Content for application patches is removed:

- If the patch has been superseded for more than two years, or
- If the patch has been superseded three or more times, regardless of the time span, or
- If the vendor removes the patch.

At the discretion of Micro Focus, some superseded patches that are heavily used or classified as Critical may remain in the Content Repository beyond two years.

Application Software Installers

Content for application software installers is removed:

- One year after a vendor reports end-of-life for the application, or
- If the application has been superseded for more than two years.
