

Reflection Desktop

Micro Focus® Reflection® Desktop is a Windows-based terminal emulator that connects desktop and mobile users to IBM, UNIX, Linux, OpenVMS, and HP systems. Secure, manageable, and easy to use, Reflection Desktop continually delivers new and better ways of doing business.

Product Highlights

Get the One-Stop Host-Access Solution

Reflection Desktop connects Windows desktops and mobile devices to IBM, UNIX, Linux, OpenVMS, and HP systems—all in one package. It also supports a mix of technologies, including Windows 10, Windows 8.1, and Windows 7; Active Directory and Group Policy; Microsoft App-V, VMware, and Citrix XenApp; and IPv6 and 64-bit computing. When it comes to host access, we have you covered.

Add Layers of Security

Reflection Desktop shields data in motion and at rest. Built to support the highest U.S. government security standards (FIPS 140-2 and DoD PKI), it provides TLS 1.2 encryption and SHA-256/RSA-2048 digital signatures. It lets you mask data on live host screens, redact data as it is entered, and prevent access via wireless networks. At a more granular level, you can log host access and specify group access levels.

Reflection Desktop can mask data as it is being typed into host sessions.

Team with Micro Focus Host Access Management and Security Server (MSS)

Enable strong security through effective management by teaming Reflection Desktop with MSS. Working with your Identity and Access Management (IAM) system, MSS seamlessly propagates changes to application settings and user-specific content—right here, right now, from a central server. You can lock down 100s (or 1000s) of desktops with ease.

Quick View

- Protect critical data with the latest security standards and protocols, including TLS 1.2, SHA-256, FIPS, RSA-2048, PKI, and IPv6.
- Use Micro Focus patent-pending Data Masking technology to strengthen security and facilitate PCI DSS compliance.
- Centrally secure and manage sessions using Host Access Management and Security Server.*
- Make host connections using virtualised platforms with Microsoft App-V, VMware, and Citrix XenApp.
- Leverage TouchUx to give iOS, Android, and Windows mobile-device users the mainframe keyboard experience they are accustomed to.
- Add modern, time-saving controls to IBM host applications using the new Plus Mode. (Additional controls are available via Reflection Desktop Plus Add-On.)

*Requires a separate licence.

Grant or deny access based on group or role. Make post-install adjustments on the fly. Next time users launch a session, they will receive the changes.

You will gain additional critical functionality when you pair MSS with these products:

- **Security Proxy Add-On**—Deliver end-to-end encryption and enforce access control at the perimeter with patented security technology.
- **Advanced Authentication Add-On**—Enable multifactor authentication to authorise access to your valuable host systems.
- **Automated Sign-On for Mainframe Add-On**—Enable automated sign-on to IBM 3270 applications via your identity and access management system.
- **PKI Automated Sign-On Add-On**—PKI-enable automated application sign-on to your critical enterprise systems.
- **Terminal ID Management Add-On**—Dynamically allocate terminal IDs based on username, DNS name, IP address, or address pool.

Team with MSS and everybody wins.

Customise Reflection with Ease

You can easily customise Reflection Desktop workspaces and sessions, locking down features and controls as needed, prior to deployment. Because Reflection Desktop leverages MSI versioning, it is easy to deploy and manage all your custom files.

Maximise Your Microsoft Investment

Reflection Desktop supports key Microsoft Windows and Office technologies, including Trusted Locations, User Account Control, the Microsoft Ribbon user interface, VBA, .NET, and Windows Error Reporting. As Microsoft evolves, so does Reflection. You can count on it.

Enhance the Mobile Experience

Together, the Citrix Receiver and Reflection Desktop TouchUx functionality overcome the limitations of mobile host access. Users get full-featured terminal emulation from their mobile devices. They get the familiar look and feel of native iOS, Android, and Windows apps. And they get easy data entry on small screens. In short, they can do their best work, wherever they are.

Cut Keystrokes, Boost Productivity

From the user perspective, Reflection Desktop delivers “easy” and “familiar.” The long list of productivity boosters includes:

- Office productivity features
- Copy-and-paste functionality
- Customisable, easy-to-distinguish tabs
- A browser-like interface
- Personalised sessions and automated tasks via VBA
- A new Plus Mode feature for adding modern controls to IBM host apps

Now host applications are as easy to use as Office applications.
