

License Counting Method Standardization for Identity Manager

Policy Number: #210

Effective Date: 16 January 2007

Audience: Customer, Partner, Internal

Applies To: Worldwide

Version: #1

Description

Customers must use a consistent counting methodology when determining license needs for Identity Manager and any Identity Manager Modules.

Policy

Customers are required to use the same counting methodology for all licenses of Identity Manager/Identity Manager Modules and are not allowed to mix counting methods when determining the license count for Identity Manager or any of its Modules. For example, if the product EULA allows the customer to count either by user or instance, the customer should choose which counting method will be applied and must use that option for all licenses purchased under their contract. The same method must be used for ALL components of Identity Manager.

This policy applies to all versions of Identity Manager and any Identity Manager modules.

Please refer to the individual product EULAs for counting method options and definitions. Product EULAs can be found online at www.novell.com/licensing/eula/.
