UFT One

OpenText™ UFT One is the comprehensive solution for modern functional testing. With its AI-driven automation, natural language scripting, extensive technology support, and real-time collaboration, organizations can streamline testing—ensuring efficiency, accuracy, and alignment in a dynamic development landscape with seamless integration into DevOps ecosystems.

Benefits

- **Comprehensive technology support:** UFT One covers 200+ GUI and API technologies for versatile testing.
- **AI-driven automation:** Harness the power of AI to automate test creation and execution.
- **Seamless collaboration:** Keep projects on track with real-time teamwork with OpenText™ ALM.
- **Cross-browser coverage:** and optimization through production monitoring.

Streamline software testing with AI-driven automation and real-time collaboration. This comprehensive solution ensures efficient, high-quality testing, empowering teams to thrive in the ever-evolving digital landscape.

With UFT One, you can effortlessly:

- **AI-driven solution for functional testing:** With a wide technology stack, AI-driven capabilities, and features like natural language scripting, cross-browser support, and cloud deployment, it addresses key challenges. Additionally, UFT One promotes real-time collaboration, service virtualization, and seamless integration into DevOps ecosystems.
- **Comprehensive technology support for defect-free applications:** UFT One's ability to cover over 200 GUI and API technologies makes it a versatile and valuable asset for software testing. This means that organizations can ensure their applications run smoothly and are free from defects across a wide range of platforms, technologies, and environments. With comprehensive technology support, UFT One significantly reduces the testing complexities associated with diverse applications, making it an ideal solution for businesses aiming to enhance their software quality.

"Working with OpenText™ (formerly Micro Focus) and using UFT One helped us to meet our client's tight timelines for testing the migrated and transformed data. We were able to meet the requirements around quality, speed, and security, and ultimately our work contributed to a seamless migration for policyholders joining our client's business."

Daniel Biondi
CTO, Australia, and New Zealand DXC Technology

- **Save time with AI-driven test automation:** The integration of artificial intelligence in UFT One revolutionizes test automation. AI-driven machine learning, advanced OCR, and object recognition capabilities empower testers to create, execute, and maintain tests more intelligently and efficiently. With AI, repetitive and time-consuming tasks are automated, reducing human errors and accelerating the testing process. This not only saves time and resources but also improves the accuracy of test results, ensuring that software applications are reliable and robust.
- **Reduce complexity with real-time and seamless collaboration:** UFT One facilitates real-time collaboration by integrating with OpenText ALM. Organizations can ensure that all team members are on the same page and that issues are addressed promptly. Real-time collaboration significantly enhances project efficiency and keeps it aligned with the timeline. This feature is especially valuable for businesses working on complex, time-sensitive projects where effective communication and collaboration are crucial.
- **Increase efficiency with Script once cross-browser coverage:** Cross-browser coverage in UFT One allows testers to script once and replay tests seamlessly across major browsers. This efficiency ensures that software applications perform consistently across different web browsers, such as Chrome, Firefox, Safari, and Edge. With this feature, organizations can reduce the time and effort required for cross-browser testing, making the testing process more efficient and accessible. This leads to increased user satisfaction and a better user experience.

UFT One stands out among its competitors with a comprehensive suite of capabilities, offering true end-to-end testing, superior AI-based features, and advanced object recognition. The AI-powered intelligent automation in UFT One, including image-based automation and machine-driven regression, outshines competitors by significantly reducing test creation time and maintenance efforts while enhancing test coverage and asset resiliency. Unlike competitors with limited technology support and no OCR/image-based capabilities beyond mobile, UFT One excels in providing extensive support for approximately 600 controls across 200+ applications and technologies. Furthermore, UFT One's Object Repository minimizes rework, simplifying script creation and improving overall script intelligibility—a notable differentiator from competitors with limited desktop testing support.
