

Micro Focus Hybrid Cloud Management provides complete enterprise multi-cloud design, provisioning & management on Microsoft Azure

ABOUT HYBRID CLOUD MANAGEMENT

Micro Focus Hybrid Cloud Management provides flexible hybrid resource automation using adaptive service designs and a master orchestrator. HCM is built on a unified containerized platform and allows IT to deploy hybrid services that run on any cloud, fully automate IT processes, optimize cloud spending with governance and accelerate DevOps using application release orchestration.

Hybrid Cloud Management for the Digital Enterprise

Hybrid Cloud Management from Micro Focus helps enterprises and service providers design, deliver and manage complete IT services across hybrid and multi-cloud environments. HCM includes the breadth of pre-integrated automation capabilities needed to address enterprise-class cloud management.

Hybrid IT Delivery

Design, provision, and manage custom-architected hybrid services. HCM features an adaptive service designer that abstracts the design from the building block resources underneath along with a master orchestrator that sits above scripts and limited tools to fully automate deployment, Day Two actions and de-provisioning. HCM's flexible resource automation enables full working services to be deployed on any environment and include containers, middleware, database elements and applications - allowing you to provide anything as a service (XaaS).

Aggregate, Broker & Govern Cloud Spending

Users can consume public cloud services – while keeping all cloud spending visible and under control. HCM aggregates and brokers selected public cloud services along with virtual templates, and offers policy-based governance, analytics and show-back reporting.

End-to-End IT Process Orchestration

With HCM, admins can fully-automate IT processes and complete actions to speed delivery, minimize manual effort and improve delivery quality. Our proven, enterprise-grade orchestration comes with an 8000+ item content library and open integration APIs.

Application Release Orchestration for DevOps

Speed application deployment with automated infrastructure deployment, custom and automated lifecycle stage gates, release scheduling, release analytics and integrations with test automation, security testing and process orchestration.

WHAT OUR CUSTOMERS ARE SAYING

"Our customers who consume cloud services are very satisfied. Our customers can get cloud services much faster and much easier. We get better functionality with the new version... better installation and upgrade, easier modeling tools with flexible, open architecture." — Jasmina Arsic, Head of Cloud services Department, Telekom Srbija

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
