

Micro Focus Connect 1.5

Micro Focus® Connect enables item and relationship data synchronization between the Micro Focus Hub and other repositories or clients. Full change management capabilities are immediately available for the data, once it is synchronized with the Micro Focus Hub. These capabilities include versioning, branching, tracing, labeling and reporting, and are contained within an environment that consolidates the managing and tracking of all project assets. This is regardless of how many tools or processes are in use across stakeholders.

Product Overview

The Software Supply Chain (SSC) process is highly complex, with many factors to delicately coordinate. This makes maintaining visibility and traceability across multiple repositories and regions and across geographically distributed teams almost impossible. So how do you resolve this issue for your customers with just a single tool?

Acquiring consistent reporting and baselines across *all* of your software delivery assets has never been easier. Adding Borland solutions to your existing environment and making sure it's in sync with Borland Connect enables you to integrate all of your teams, tools and assets for a consolidated view of the entire software delivery life-cycle. When connected, you can analyze all data and trends easily, which means you are more organized and efficient.

Key Features

Micro Focus Connectors

New connectors are constantly being developed and published on the Borland Community. If a connector doesn't yet exist for one of your tools, use the Borland Connect API to create one quickly. Once plugged in, each connector can be customized using a mapping file so that your exact environment of public and private tools is fully supported. If a desired repository is not currently available as a sample connector, Borland Connect also provides a Java API. This enables you to easily define your own connector for Borland Connect to use, creating a direct match for the data repositories you wish to integrate together using Borland Connect

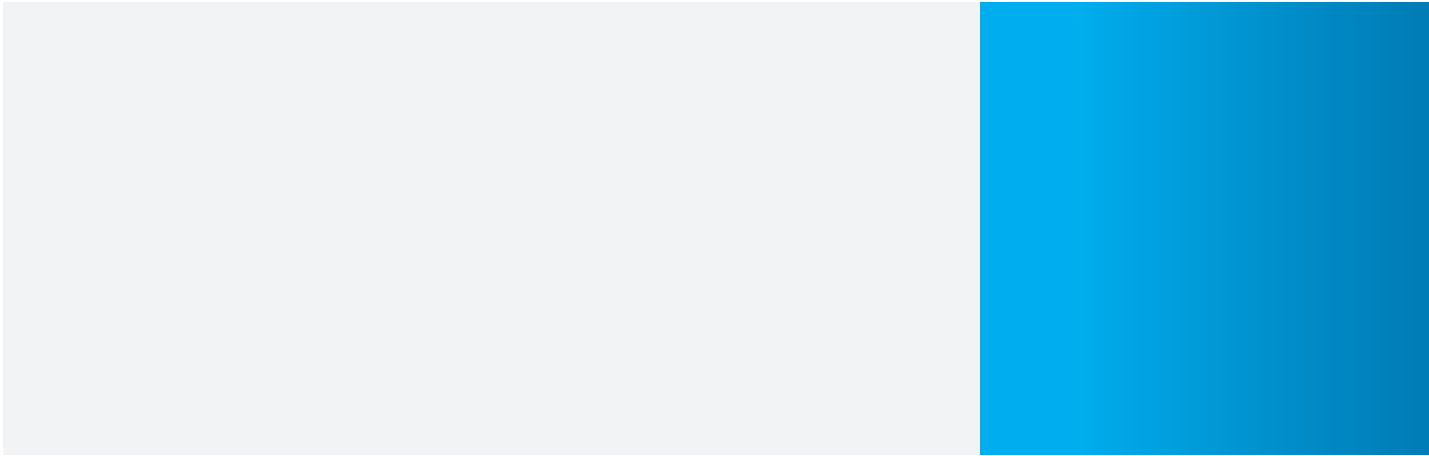

Why not try Micro Focus Connect for free to discover how you can improve visibility across your entire ALM? Try now at: www.borland.com/en-GB/Products/Change-Management/Borland-Connect/Product-Trial

Key Benefits

- Use your tool of choice
- Project contributors gain a consolidated project activity view
- Stakeholders receive consistent insight across companies, teams and projects
- Increased value over external assets:
 - Traceability
 - Versioning
 - Baselining
- Flexibility to represent how other tools depict assets and their relationships:
 - Support for hierarchical types
 - Support for relationships
- Replace single point integrations with a single source of truth

Current Connectors

- JIRA
- Git
- Subversion
- Rally
- TFS
- AccuRev
- HP ALM
- Email
- Excel
- VersionOne
- Develop your own Borland Connector
