

Content Manager Select

Content Manager Select provides the core functionality for managing the retention and deletion of data, which is mission critical for managing content in compliance with privacy mandates around the world. Content Manager Select makes customer usage of Content Manager simple, modern, flexible and easy to consume.

Product Overview/Highlights

Content Manager Select is a cornerstone of the Micro Focus Data Governance portfolio of modular solutions. It is a proven content management system that offers the flexibility, usability, and scalability needed to manage your information from creation to disposal, helping organizations meet data privacy guidelines and achieve their information governance objectives.

Key Features

Content Manager Select is based on Micro Focus Content Manager, an industry leading global solution with thousands of customers and over two million licensed users. The full power of Content Manager is unleashed in Content Manager Select, including the full capability to manage data connected to mission critical business processes. Using Advanced Disposition Processing and Auto-Classification, which are included, organizations have the full capability to manage data deletion processes associated with privacy management as well as integration to enhance the compliancy and validation of SharePoint and Office365.

Content Manager Select comes pre-packaged with five administrative users and a 500,000 object allowance to get you started on your content management journey. The three user types—Administrator, Power User and Inquiry User, give customers the ability to fully access,

manage and search information from the desktop, via tablet and mobile devices. The Inquiry User—with full search capabilities—has no charge, so customers can extend Content Manager to any authorized user at no additional cost. Users are also required to purchase subscriptions to volume packages to support the ingestion and management of data from sources throughout the enterprise. Existing customers using Content Manager in a perpetual model can request conversion to CM Select to leverage the expanded user coverage and transition to an MSP delivered solution.

Customer benefits include giving them more power to carefully manage exact needs and usage requirements, allowing them to operationalize the cost and work directly with Managed Solution Providers to lower the total operating cost while providing a very rich functional experience for users.

Summary

Because today's information is diverse, you have to manage content in a variety of forms, including emails, web content, Microsoft Office documents, video, and text messages—all while providing rigorous security and user-friendly access from a range of devices at any time. In this new modern subscription model, Content Manager Select gives you the opportunity to deploy the products' functionalities across your entire user base.

Content Manager Select Offers a Range of Benefits Including the Following:

- **Unlimited Inquiry (read-only) users**—Included in the new core license, and at no additional charge, inquiry or read-only users will be unlimited. Inquiry users can login and perform unlimited searches for content.
- **Simplified license metrics**—Content Manager Select features three user types versus the perpetual five user types, which means far greater latitude in setting permissions for a majority of your users.
- **Enriched user experience**—Now included in every paid user license are five of the CM modules, including Auto-Classification, Advanced Disposition Processing, Rendering, Warehousing & OCR, which are critical in supporting your data privacy initiatives.
- **NEW MSP model**—The subscription model provides a pathway and will also allow you to accelerate your MSP business that will be partner-delivered from their cloud.
