

# GroupWise Cloud Disaster Recovery

Micro Focus® GroupWise® Cloud Disaster Recovery protects your organization from email outages, productivity disruptions, and data loss should your on-premises GroupWise system experience a hardware failure or a site disaster. Up-to-date backups are stored in secure data centers and can provide full email capabilities to your company in the case of a disaster or outage.

**Cloud Fail-Over**  
The Micro Focus Cloud can temporarily replace your GroupWise Server if it goes down.

## GroupWise Disaster Recovery

Increase email availability and keep employees productive in the event of a disaster or outage with immediate failover to the Cloud. GroupWise Cloud Disaster Recovery is built and designed for GroupWise to ensure complete backups of your GroupWise email system.

## Features and Benefits

**Push-button Recovery:** GroupWise Cloud Disaster Recovery provides one-click GroupWise disaster recovery. With hot backups of the GroupWise system, it allows for immediate recovery and full restoration of all or any portion of your mail system: a domain, a mailbox, or a single email.

**Built for Speed:** GroupWise Cloud Disaster Recovery is fast. Its rapid backup capabilities allow you to perform and access intra-day backups of post offices and up to 10 simultaneous backups. With its unique design, approximately

12% of the total size of the post office is stored on disk each day, even if you are doing multiple daily backups.

**Designed for GroupWise:** GroupWise Cloud Disaster Recovery is built and designed for GroupWise to ensure perfect backups of your GroupWise system. These backups use Micro Focus's SmartPurge technology, which ensures complete backups. With GroupWise Cloud Disaster Recovery, no email message is purged until it is backed up by the cloud server.

**Collector or Server Model:** GroupWise Cloud Disaster Recovery can install a Collector on

the Linux server that houses the GroupWise Post Office or Domain. The Collector gathers the contents of a GroupWise post office OFUSER and OFSMG directory into a staging area on the local GroupWise server. The Collector uses RSYNC technology to replicate the contents of the post office to the server. This new architecture creates faster backups, backup redundancy, elimination of the need to have an on-premises server, and less required disk space and processing power.

**End User Self-Service:** With the "Auto-Reload" feature, users can easily retrieve email messages, calendar items, or attachments that have been accidentally deleted from GroupWise without any assistance from IT.

**Single Instance Storage:** GroupWise Cloud Disaster Recovery stores only one copy of an email or attachment, keeping storage costs low.

# “I believe all GroupWise systems should have GroupWise Disaster Recovery.”

**ANDREW SIMPSON**

Head of IT  
Public and Commercial Services Union, United Kingdom

**Post Office Migration:** GroupWise Cloud Disaster Recovery includes tools to migrate your email data back to a production server. It can also help you migrate a post office or domain from one platform to another—such as migrating from NetWare® to Linux.

**Web-based Administration:** The web interface for GroupWise Cloud Disaster Recovery provides a central point for all administration tasks such as monitoring system health, checking available disk space, and managing backup profiles. Main tasks are prominent and easy to use.

**Profile Management:** Manage GroupWise Cloud Disaster Recovery profiles directly from the main administration interface. It allows you to make changes globally across all of your backup profiles. Plus, in the latest version, you can have linked profiles.

**Reports and Notifications:** View useful statistical information such as backup runtime and backup completion time via single consolidated daily reports. In addition, GroupWise Cloud Disaster Recovery can send email notifications to multiple recipients to alert administrators when pre-configured thresholds have been exceeded.

**QuickFinder Resolution Agent (QRA):** GroupWise Cloud Disaster Recovery solves your GroupWise rebuild issues. It can take days for GroupWise to fully restore the end-user index and find capabilities after a database rebuild. Yet with GroupWise Cloud Disaster Recovery, our QRA restores end user search abilities in a matter of minutes.

## **On-Demand Post Office Backup Deletion:**

In GroupWise Cloud Disaster Recovery, you can choose a specific post office backup to delete, and it will set out to delete it immediately. This feature is particularly helpful when a GroupWise Cloud Disaster Recovery server is just barely over its disk space error threshold, and backups have stopped because of disk space overage. Choosing the oldest backup, or perhaps an intra-day backup, is a good measure to resolve the issue immediately.

**In-line Help:** GroupWise Cloud Disaster Recovery web administration includes context sensitive help to give you relevant information when and where you need it.

**Client-Free:** With GroupWise Cloud Disaster Recovery, there is no software to install on your GroupWise servers.

**Multi-System Integration:** GroupWise Cloud Disaster Recovery backs up GroupWise post offices regardless of the platform used. This includes Linux, NetWare, and Windows. It is fully compatible with GroupWise 7 and above, as well as Micro Focus Retain™.

## **Support for PRTG Network Monitoring:**

GroupWise Cloud Disaster Recovery has an API, with scripts already made for the network monitoring solution PRTG.

**Store Your Backups On-Premises, Offsite, or in the Cloud:** Choose how your data is stored. Data can be stored on-premises behind your organizational firewall, off-site, in the Micro Focus cloud or as a hybrid of on-premises, off site, and Micro Focus cloud.
