

Mobile Application Lifecycle Management Solution Discovery Workshop

Go mobile with confidence.

Overview

The way your users consume your services is changing. Are you ready?

Mobile devices now reign supreme. 'There is an app for that' has moved from slogan to reality and even corporate IT users are abandoning traditional devices such as PCs and laptops in favor of smartphones and tablets, demanding the same experience from their corporate applications that they have in their private lives. Many IT organizations are rethinking how they deliver applications to their users, which brings a new set of challenges to your engineering and QA teams, who must now evolve their practices to keep up with this rapid change.

Making this transition, however, is not trivial. It is not as simple as perhaps buying a new tool or outsourcing application development. Ensuring the quality and performance of your mobile applications requires rethinking your application lifecycle management approach. You need to devise a holistic strategy encompassing technology, people, and process, and translate it into an actionable roadmap that will help you speed up and mature your testing capabilities and competencies to stay ahead of the curve.

Get the Full Picture

We believe that even if your organization has not yet been significantly impacted by the explosion of adoption of mobile technology, you will need to face the challenges it brings sooner than later. To succeed in meeting these challenges, you need to be able to address questions such as:

- Almost all mobile application development is done with Agile or DevOps approaches. Can my testing regimen operate at these speeds?
- Do I have the right tooling?
- How should I change my processes to adapt to mobile testing?
- How do I integrate mobile testing practices with legacy ones?
- How can I test for performance?
- What is the best way to deal with the multitude of target devices?

To help you understand where your organization currently stands and how you can develop a strategy to mature your capabilities, we offer the Micro Focus® Mobile Application Lifecycle Management (ALM) Solution Discovery Workshop.

Key Benefits

- Understand your current situation and how you can position your organization for success in delivering mobile applications
- Take a holistic approach—people, process, and technology—to ALM for mobile applications
- Draw on best practices around ALM for mobile applications
- Prioritize initiatives around mobile testing and quality management
- Gain stakeholder buy-in and give traction to your future roadmap

Key Features

The Mobile ALM Solution Discovery Workshop assesses your organization's mobile ALM maturity level from process, technology, and people perspectives. The insight gained from the assessment is then turned into a set of deliverables including:

- Maturity profile
- Initiatives roadmap
- Technology blueprint

Together, these formulate a prescriptive strategy to integrate mobile ALM with your application lifecycle management capabilities.

The workshop spans over approximately two weeks and begins with a two-day onsite visit by a senior Micro Focus consultant. During this visit, the Micro Focus consultant conducts a series of discovery sessions with the relevant stakeholders—product owners, developers, scrum masters, business analysts, testers, project managers, and release and operation personnel. These sessions aim at gathering and documenting the baseline for your current state and maturity—your strengths and challenges.

Following the discovery sessions, we use our vast experience in Agile, quality management and mobility testing to establish your maturity profile, determine the gaps between current and desired states, and identify improvement opportunities. We create for you a roadmap—both short- and long-term—as well as assess the return on investment for the business value you will gain by adopting these recommendations.

At the conclusion of the workshop, we present our recommendations and discuss next steps.

What's Next?

Is it your goal to achieve excellence in managing the quality and performance of your mobile applications, as well as legacy ones? If so, then we at Micro Focus can guide you on your journey and help you meet your objectives.

Once you have a roadmap for the future, we can help you execute it, whether it is the implementation of Micro Focus's leading ALM for Mobile solutions, managing the change of the transition or re-engineering your processes. Over the years, we have helped many organizations like yours achieve excellence in ALM and we can bring the same experience to you.

The Micro Focus Professional Services Difference

Micro Focus provides unmatched capabilities with a comprehensive set of consulting and implementation services and unique intellectual property that help you drive innovation through streamlined and efficient software delivery.

- Proven Micro Focus software solution implementation expertise
- More than 20 years of experience helping large, complex, global organizations realize value from their Micro Focus software investments
- Rich intellectual property and unparalleled reach into product engineering
- Technology-agnostic implementation approach with no vendor lock-in, no rip-and-replace
- Education and support services to ensure adoption
