Need a Cloud Collaboration Platform Alternative?

Security issues? Government restrictions? No matter your reasons for needing a cloud collaboration platform alternative, you have options. Our solutions help your teams collaborate closely while helping you manage the crucial information your business needs to succeed.

Product Highlights

If you are in the market for a cloud collaboration platform for your information management and governance needs, you may want to see the solutions OpenText™ can provide that strike the balance between collaboration and security.

OpenText has a comprehensive bundle of enterprise solutions that enable flexible, collaborative work environments while giving people the power to control them. Our solutions empower remote workers with access to the right data, at the right time, from any device. Plus, they are some of the most secure products in the world.

Business functionality success lies at the intersection of effective collaboration and compliance-focused data security. With many options on the market today, it can be difficult to determine which of the two forks in the road is the right choice for the business.

Many platforms on the market focus on one of the two business functionality success factors and do it well. Unfortunately, this too often comes at the expense of the other. For example, a solution may provide users with extremely efficient file-sharing capabilities but lacks the compliance-focused security an enterprise needs to safeguard its data.

Key Benefits

Whatever your specific collaboration requirements are, OpenText has a solution that can fill your information management and governance needs. From creation to disposal, OpenText can provide you with the capabilities to manage your data effectively, while converging at the crossroads of collaboration and security. Enable your organization with the ability to:

- Unify traditional and mobile device management to reduce costs, improve productivity, and protect the organization.
- Ensure your business operations quickly return to normal with secure, compliant backups of all company data and endpoints from a single management point while minimizing revenue loss and maintaining reputation with fast data restoration.
- Help your business teams work together securely and seamlessly, regardless of location with a single, integrated software ecosystem that offers everything your teams need to stay connected.
- Protect your enterprise file shares with an approach that offers true enterprise file sharing, real-time collaborative co-editing, secure mobile access, and more.

OpenText Cloud Collaboration Platform:

- Enterprise Messaging
- GroupWise
- Vibe Collaboration Platform
- Secure File Sync and Share
- Unified Endpoint Management
- Data Backup and Resiliency
- Email, Social, and Team Collaboration

Key Features

OpenText has the core information management and governance solutions every business needs to manage, protect, and secure their data, while enabling effective collaboraxtion from anywhere, on any device.

Unified Endpoint Management

Need an alternative to your current enterprise endpoint management system? Our solutions provide traditional and modern device management to protect, secure, and manage your Windows, macOS, iOS, Android, and Linux endpoint devices.

OpenText™ ZENworks Suite enables you to manage thousands of devices and applications, assets, and an unending list of software patches, allowing you to keep up with the constantly changing, new requests every day.

This is your complete platform of products that combines the tools you need to manage, secure, and protect your endpoint environment and data from a single place.

ZENworks Suite includes:

- OpenText™ ZENworks Asset Management—Track your software deployments and usage while maintaining license compliance.
- OpenText™ ZENworks Configuration Management—Manage both devices and software across your entire environment with a single, unified console.
- OpenText™ ZENworks Endpoint Security Management—Protect your organization's vulnerable IT assets with location-aware, policy-based solutions on Windows devices.
- OpenText™ ZENworks Full Disk Encryption—Encrypt your data with a fixed-disk, data-at-rest encryption solution for Windows.
- OpenText™ ZENworks Patch Management—Automate your maintenance patching and provide on-demand threat remediation with multi-platform software patching.

- OpenText™ Hybrid Workspaces—Accomplish better application distribution through containers and streaming, promoting remote worker productivity.
- OpenText™ Service Desk—Provide your users with help when they need it while improving IT efficiency with an ITIL-based service desk solution.

Data Backup and Resiliency

Unable to use your current data protection software? OpenText™ Data Protector and OpenText™ Data Protector for Cloud Workloads deliver backup and disaster recovery for physical, virtual, cloud, and container environments.

Data protection products from OpenText can help you ensure your organization will have secure, compliant backups of all company data from a single management point. A fast restoration ensures operations quickly return to normal, minimizing revenue loss and maintaining reputation.

OpenText can help protect your data with:

- Data Protector—Build your data resiliency with secure, comprehensive backup protection for business-critical data and applications whether virtual, physical, or online in the cloud.
- Data Protector for Cloud Workloads—Recover your data quickly from disasters or ransomware with this solution for Microsoft 365, containers, hypervisors, and cloud platforms.
- OpenText™ Connected 10—Mitigate data loss with this secure cloud service endpoint protection solution that integrates policy-based endpoint protection with rule-based file synchronization for sharing assets.
- OpenText™ Connected Backup—Back up PCs with this fully automated solution that works in the background as users go about their daily tasks and simplified data

administration and reporting across the enterprise.

Email, Social, and Team Collaboration

Our collaboration solutions bring people, projects, and processes together in one secure place to enhance team and employee productivity.

You can help your business teams work together securely and seamlessly, regardless of location. OpenText Email, Social, and Team Collaboration solutions provide a single, integrated software ecosystem that offers everything your teams need to stay connected. Enhance your collaboration with:

- OpenText™ Filr—Facilitate secure file sharing with Filr and equip your users with access to the files they need from any device.
- OpenText™ Enterprise Messaging—Elicit chat-based collaboration with this solution that provides secure email and instant messaging with archiving and disaster recovery.
- OpenText™ Open Enterprise Server (OES)—Manage all of your printing across any location or device and securely deliver advanced file, print, network, and storage management services across your enterprise.
- OpenText™ GroupWise—Meet today's mobile world business with modern email, messaging calendaring, contact management, and scheduling.
- OpenText™ iPrint—Provide a way for anyone to securely print anything they need from any device across the enterprise.
- OpenText™ Retain Unified Archiving—Equip your organization with an archive of all business communication for case assessment, search, and eDiscovery.
- OpenText™ Vibe—Create a corporate community and provide a secure team

opentext™

collaboration environment with document management and workflow features.

- OpenText™ Open Workgroup Suite— Combine seven essential collaboration tools in one convenient bundle to build IT infrastructures, including secure file sharing.

Enterprise File Sync and Share

OpenText Filr will allow you to remotely access and share, internally or externally, your existing on-premises file storage from a browser, desktop, or mobile app. No cloud. No duplication. No additional security overhead. Only better collaboration.

Enterprise file sharing requires high levels of security, accountability, thorough controls, and other features that empower IT to protect the enterprise. OpenText provides an approach that offers true enterprise file sharing, real-time collaborative co-editing, secure mobile access, and more:

- Filr—Connect your file servers and the endpoint devices in your organization with Filr, and because it connects to users' home directories and shared network folders, the data backup and security systems that your IT department has put in place can remain in force.

- Open Enterprise Server—Share files with ease and provide access to the latest version of each file your users need.

- OpenText™ File Reporter for OES— Analyze all the files and associated access rights across your OES network, giving you all the information you need to make necessary decisions for optimizing and securing your data.
