Micro Focus® Operations Bridge (OpsBridge) monitors your IT environment and consolidates data from existing tools. It applies automated discovery, monitoring, analytics, and remediation to data across traditional, private, public, and multi-cloud and container-based infrastructure. It exploits Automated AIOps machine learning and analytics for event reduction and accelerated root cause identification and then executes automated remediation. Executive stakeholders gain actionable insight on their mobile devices with tailored dashboards showing key status, business and IT KPIs.

**Product Highlights**

**Hybrid Cloud Monitoring for the Digital Enterprise**

Hybrid IT has quickly become the new normal, and IT operations teams are expected to offer both cloud and on-premises infrastructure options, whichever best meets the needs of the application or service. IT operations teams must adapt fluidly to new technologies, effortlessly adopt new cloud vendors and other services chosen by the business, and monitor new applications and application releases with increasing frequency—while seamlessly handling updates to existing application workloads. Further, IT operations need to be able to be a partner to the business, speak their language, and show their value to the business.

OpsBridge exploits all AIOps capabilities to consolidate and analyze all your data. It reduces event volumes, isolates root cause, performs robotized process automation to remediate and visualizes in real time in a single pane of glass. It allows you to improve efficiencies and is designed using new technologies such as containers and microservices. OpsBridge is now easier to implement and upgrade, enabling you to provide flexible cloud services, and accelerate time to market for applications that will differentiate your organization.

**Key Benefits**

- Increased effectiveness (time, money, resources) of tools and services
- Reduced effort and time to process service requests and resolve problems
- Confidence from the lines of business in IT’s ability to deliver consistent, compliant services
- Business needs and strategy that are met on time and on budget, and in stronger collaboration with IT
- Reduced business risk, better service price performance, and accelerated time-to-market for new innovations

**Deliver What the Business Needs When It Needs It**

Designed to deliver real business value, OpsBridge integrates all your tools, automates manual tasks, focuses operations on the business services and users being impacted by automatically identifying root cause faster than ever before possible, predict future impact and then automate remedial action. Built in AIOps capable analytics drives historical analysis, applying machine learning and 50+ patented algorithms to logs, events, metrics, and topology so much more powerful than search alone.

**Key Features and Benefits**

- Automate hybrid IT discovery & monitoring. See health and impact of IT resources across private & public cloud
- Consolidate data and reduce noise. Across all data types from 200+ domains, feed signals to AIOps
- Automate AIOps & robotize remediation. Build a virtual workforce with automated remedial actions and processes
- Analyze application health. Automate anomaly detection and adjust to meet business SLAs
- Customize dashboards & reporting. Provide actionable insight in real-time for faster decisions
Key Features

Automate Hybrid IT Discovery and Monitoring

Discovery and monitoring consolidates and exploits all your data types (events, metrics, logs and topology) within a dynamically updated and accurate model. It shows the impact of incidents, ensuring no new service goes overlooked with dynamic top down and bottoms up service modeling and with monitoring automation.

Aggregate all your Hybrid IT resources into a single view with 200+ technology integrations. OpsBridge solution templates and management packs provide deep rich domain specific monitoring including: infrastructure, databases, Microsoft environments, SAP environments, middleware, cloud, big data, application platforms, automation, load balancers, and web servers (see table on page 3). The data is integrated into Collect Once Store One technology (COSO), a containerized common data collection and storage for real-time streaming data ingestion and processing.

Consolidate Data and Reduce Noise

IT experts advise that application of common data ingestion and algorithmic Big Data driven analytics to all your data is the key to improving service excellence.

OpsBridge includes analytics and is based on 50+ patents for high-speed, high-volume data analysis. Automated log, metric, and event analysis, plus anomaly detection, proactively alerts operators to abnormal activity and uncovers the most relevant insights from hundreds of millions of records to help your team better prioritize. With “time machine” replay, which correlates disparate data over any time period and in relation to topology graphs, users can visualize with ease when the problem started and find the offending resource.

Adapting to changing circumstance is a core requirement for an agile organization. That’s the DevOps methodology, and OpsBridge supports it.

To enhance your control of virtualized resources and dynamically changing workloads, OpsBridge proposes optimized recipes of your resources. This gives you the ability to visualize resources, forecast their allocation impact, and master costs to set the right level of service.

Automate AIOps

OpsBridge incorporates all 11 AIOps capabilities, from agent-based intelligence and real-time performance analytics to multi-mode stream-based and topology-based correlation of event streams over time and across dependencies.

Robotize Processes and Remediation

With more than 5,000 runbooks to choose from, including hundreds of out-of-the-box integrations to popular IT Service Management tools, OpsBridge simplifies and accelerates automation of tasks such as remedial actions, notifications, and recovery procedures. Orchestration of complex and conditional execution and rollback provides the means to strengthen compliance, remove manual errors, and develop Robotic Process Automation (RPA) to slash costs and drive compliance, releasing rare resources for more important business priorities.

Adapting to changing circumstance is a core requirement for an agile organization. That’s the DevOps methodology, and OpsBridge supports it with:

- A dynamically updating model that reflects the deployment of new application and infrastructure instances, automatically activating the required monitoring.
- Robotized features for ChatOps-based collaboration across teams and tools such as SiteScope, OpsBridge Reporter and Operations Orchestration
- Automated tasks that are used to capture and share vital production information to the extended teams, as well as activating alternative configurations to keep your business on track.

Analyze Application Health

OpsBridge provides probes dispersed across the world, to measure service quality, control SLAs, and application health. That data is also fed to COSO, processed by the AIOps based analytics, and shown in reports and dashboards.
Customize Dashboards and Reporting

The Business Value Dashboard (BVD) can exploit all the status and KPI data at your disposal to provide a TV-like, live channel of business and IT news that the BVD “paints” onto a tablet or any other device with a browser. BVD software can display online information—such as internet news feeds, live programs, and streaming videos—in views developed using popular office tools. BVD can consume historical data stored in COSO, preprocessing and analyzing that data before it is displayed for lightweight reporting. BVD-in-3 provides 3 quick and easy steps to configure tailored dashboards in minutes.

OpsBridge Performance Engine and BVD provide highly scalable, real-time performance collection, analysis and graphing for hundreds of metrics and consume data from COSO. You can build and combine different metrics and IT status information into powerful dashboards that can be easily and quickly tailored into domain or contextually-specific dashboard mashups.
