

Reflection for Secure IT Client for UNIX

Micro Focus® Reflection® for Secure IT Client for UNIX is an SSH client that provides secure file transfer and terminal access for UNIX platforms through utilities such as ssh, scp, and sftp. It is part of the Reflection for Secure IT family of Secure Shell clients and servers for Windows and UNIX—all designed to protect data in motion. With these products, you can safely transfer sensitive data, manage remote servers, and access corporate applications over encrypted connections.

Product Highlights

Secure Internet File Transfers

With Reflection for Secure IT, you can confidently exchange private files with business partners and customers over the Internet.

Secure Remote System Administration

With Reflection for Secure IT, you can use interactive access, scripting, and APIs to automate

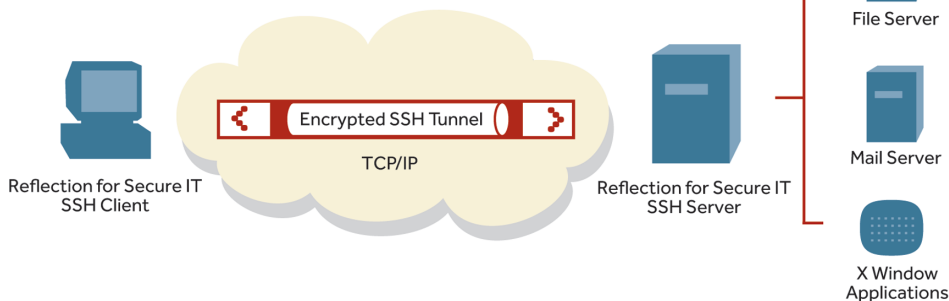

and schedule routine system administration tasks over a secure channel.

Secure Application Access for Users

With Reflection for Secure IT, you can protect the network communications of any TCP/IP-based application.

Quick View

- Replace nonsecure Telnet and FTP with a secure, encrypted alternative.
- Secure remote administration of critical servers, even over untrusted networks.
- Safely transmit sensitive data and ensure that transfers are completed.
- Access any TCP/IP-based application through a secure transmission tunnel.

Together, the SSH client and server form a secure “tunnel” through which all communications travel.

About Micro Focus

Since 1976, Micro Focus has helped more than 20,000 customers unlock the value of their business logic by creating enabling solutions that bridge the gap from well-established technologies to modern functionality. The two portfolios work to a single, clear vision—to deliver innovative products supported by exceptional customer service. www.microfocus.com
