Rumba+ Desktop

Micro Focus® Rumba+® Desktop is a terminal emulation solution that brings modern security, manageability, and user productivity to your host-access environment—without code changes or business disruptions. It provides a fast, low-risk, cost-effective way to modernize your most critical business applications.

Product Highlights

Make Secure Connections
Safeguard your most valuable data and facilitate regulatory compliance with layers of security. From FIPS 140-2 validation to SSL, SSH, FTP, and Kerberos, Rumba+ Desktop has you covered. What's more, all activities are recorded for compliance, activity monitoring, or training purposes.

Comply with Market Regulations
Rumba+ helps you comply with PCI-DSS, GDPR, HIPAA, and other regulations through data redaction. This allows you to redact live data from the host to protect sensitive data (including credit card numbers, social security number, and more).

Data Privacy
Rumba+ helps ensure data privacy by allowing you to verify user access rights and redact sensitive data (including credit card numbers, social security numbers, etc.).

Team with Micro Focus Host Access Management and Security Server (MSS)
Enable strong security through effective management by teaming Rumba+ Desktop with MSS. Working with your Identity and Access Management (IAM) system, MSS seamlessly integrates with Rumba+ Desktop to provide a comprehensive solution for your host-access environment.

Quick View

- **New Data privacy**: Allows you to redact sensitive data (such as credit card, social security number and more), live from the host based on regular expression or screen zones.
- **New New Auto-Complete**: Improve end-user productivity through auto-suggest of frequently typed data by field.
- **New New Microsoft VBA support**: Rumba+ can be automated using standard VBA scripts within Rumba+, in addition to automation with any Microsoft product. This automation includes strong Reflection script support.
- **Easily automate business processes with a visual code editor (Express Macro Language)**.
- **Protect sensitive data with the latest security standards and protocols**, including FIPS 140-2 validation, SSL/TLS, SSH, FTP, and Kerberos.
- **Centrally manage and secure sessions using Host Access Management and Security Server**.
- **Easily modernize green screens without rewriting the underlying application or having any specialized knowledge**.
- **Cut keystrokes and improve user productivity with familiar controls**, including drop-down menus, graphs, phone systems, multiple tabs, multiscreen tables, and hyperlinks.
- **Take full advantage of Microsoft Office functionality from your Rumba+ Desktop sessions**.

*Requires a separate license.

Figure 1. Modernize green screens and watch productivity rise.
propagates changes to application settings and user-specific content—right here, right now, from a central server. You can lock down 100s (or 1000s) of desktops with ease. Grant or deny access based on group or role. Make post-install adjustments on the fly. Next time users launch a session, they’ll receive the changes.

You’ll gain additional critical functionality when you pair MSS with these products:

- **Security Proxy Add-On**: Deliver end-to-end encryption and enforce access control at the perimeter with patented security technology.
- **Advanced Authentication Add-On**: Enable multifactor authentication to authorize access to your valuable host systems.
- **Automated Sign-On for Mainframe Add-On**: Enable automated sign-on to IBM 3270 applications via your identity and access management system.

Team up with Rumba+ Desktop, and you’ll team with MSS to achieve business application modernization.

**Modernize Green Screens with Ease**
Revise your thinking about the typical modernization process—which is long, complex, and riddled with risk. Transform complex green screens into user-friendly interfaces. Merge multiple screens into a single page. Integrate host applications with Google, VOIP, SAP, and Sales Force. Automatically convert screen contents into Rumba+ controls and deploy them to individuals, departments, or the organization. Do it all quickly and easily, without code changes or specialized knowledge.

**Watch Productivity Rise**
Say goodbye to time-consuming, error-prone operations. Now you can boost user productivity with familiar controls such as drop-down menus, graphs, phone systems, multiple tabs, multiscreen tables, and hyperlinks. Eliminate the need to navigate away from, or switch between, multiple screens. And imbed data and common apps—for example, Google maps, graphs, tables, calendars, and VOIP—right into session windows.

**Maximize Your Microsoft Investments**
Rumba+ Desktop is certified for Microsoft Office, which means users can interact with other Office applications—including Microsoft Word, Excel, OneNote, and PowerPoint—from within their Rumba+ Desktop sessions. It also means they can take full advantage of Office productivity features, copy-and-paste functionality, customizable tabs, personalized sessions, and automated tasks. Rumba+ can be automated using standard VBA scripts within Rumba+, in addition to automation with any Microsoft product.
