

# NetIQ SecureLogin

SecureLogin is one of the leading single sign-on (SSO) products on the market today. It allows users to access local and network resources using a single set of credentials. When users log into a desktop, SecureLogin automatically authenticates them to all of their applications and resources. With only one password to remember, users no longer need to write them down; create ones that are weak so they're easy to remember, or call helpdesk for resets when they forget them.

## Product Highlights

### Key Benefits

NetIQ SecureLogin helps you to ease out the password pains for end users and helps them focus on their primary job thereby increasing the productivity of your employees. With SecureLogin not only do you get single sign on ability for all your applications on Windows but also an added advantage of being able to add other factors of authentication where it is really needed. You choose which applications need not ask for authentication after the user has already authenticated, you also choose which applications require a step up. This gives you the freedom to design your own flow of user validation and not be restricted to what an application is implemented to do.

SecureLogin also help reduce helpdesk calls by giving the flexibility to the end users to manage their own profiles and passwords.

SecureLogin enables shared workstations to be used as kiosks enabling users to quickly tap in to get logged in and directly land onto the desired application. Once down the user can just tap to get logged out.

### Key Features

- **Single Sign On for All Windows Applications.** We support all kinds of

Windows applications ranging from .NET, Java, native applications to web applications on all popular browsers. It is completely seamless for end users, helping them focus on their primary job.

- **Remote Users Support.** Single sign that works even when the user is not connected. SecureLogin keeps a local cache for all the applications of the users and helps them even when it is not able to access the data.
- **Advanced authentication supports.** When deployed with Advanced Authentication, SecureLogin can not only help replace passwords with other methods of authentication but also do a step up authentication in case critical applications or data is being accessed. We support most smart cards, proximity cards and token based or biometric authentication device and many other methods.
- **Fast user switching.** In kiosk or shared workstation kind of scenarios, users might need to swiftly log in do their job and switch. This makes sure that when the next user comes on, the previous user is logged out. The administrator and configure to launch specific application when a user signs in helping the user to do his targeted task very quickly. This helps users move between device in a fast and secure fashion.

## Quick View

- Easily fits into existing architecture with no rip-and-replace requirements
- Integrate applications quickly using a built-in integration wizard.
- SSO experience across both Windows and web based applications
- Always provide a SSO experience for portable devices, even when they are not connected
- Advanced authentication supports
- Fast user switching for kiosk based workstations
- Self-service password reset
- Powerful automation engine that can do much more than just password screens
- Step up authentication for specific applications
- Citrix Certified
- VMware Certified
- Windows terminal servers supported
- Integrates with Identity management solutions to provide workflow automation

**“We feel ready for the future with our Micro Focus solution and appreciate that Micro Focus took the time to understand our requirements, both now and in the future, and worked with us to find the best and most cost effective solution for us.”**

- **Self-service password reset.** This helps users reset their passwords, change their profile data and browse the company white pages without needing help from a help desk.
- **Application Automation.** SecureLogin has a scripting framework that can help you automate many application screens. Administrators can write scripts that can automate UI actions on applications which could help them create smarter workflows.
- **Identity management.** We can integrate with any identity management solution to help automate provisioning of a user who needs to be on-boarded or de-provisioning for a user who is exiting or changing the role.
- **Easily fits into existing architecture with no rip-and-replace requirements.** SecureLogin uses your existing identity infrastructure as its data store. It can store all its data in any LDAP compliant directory. So there is no need to have an additional, remove or replace any of your infrastructure.
- **Wizard for SSO training.** SecureLogin comes with a built in wizard that help you train it to SSO any application. This wizard is very easy to use and recognizes a password form on its own, all we need to do is tell it what actions it needs to take on the screen.

## System Requirements

### Clients Supported:

- Windows 7, Windows 8 and Windows 10.
- Windows Server 2008 R2, 2012 and 2016
- Citrix Win32 ICA Client
- Windows Terminal Services Client, RDP
- VMware VDI

### Web Browser Support:

- Internet Explorer
- Mozilla Firefox
- Google Chrome
- Microsoft Edge

### Directory Server Support:

- Microsoft Active Directory
- Microsoft Active Directory Lightweight Directory Services (LDS)
- Microsoft Active Directory Application Mode (ADAM)
- NetIQ eDirectory
- V3-compliant LDAP directories, operating on any of the following platforms:
  - Microsoft Windows Server
  - Sun One
  - Citrix Presentation Server
  - Citrix XenApp

### Credential Repository Servers:

- Microsoft LDS, ADAM, Terminal Server, or Advanced Server with Active Directory
  - Microsoft Windows Server or Terminal Server with Active Directory
  - Open Enterprise Server with NetIQ eDirectory
  - NetIQ eDirectory on OES on supported platforms
- Servers running LDAP-compliant directories
