UFT One

Accelerate and simplify end-to-end functional testing with one intelligent solution that builds and automates tests for web, mobile, API, RPA, and enterprise apps using embedded AI-based capabilities.

Product Highlights

How UFT One Can Help
Micro Focus® UFT One accelerates and simplifies end-to-end functional testing with one intelligent tool that builds and automates tests for web, mobile, API, RPA, and enterprise apps using embedded AI-based capabilities. QA and Testing teams can efficiently scale tests across distributed infrastructures and in parallel on web and mobile; script once and replay all tests with cross-browser support; and leverage a broad ecosystem of integrations from version control to continuous integration to agile management. With support of 200+ technologies including SAP, Salesforce, Java, Citrix and more, UFT One increases test coverage from the UI to the API—and everything in between—for true omnichannel app testing.

UFT One is part of the industry-leading UFT family of integrated Functional Testing solutions which enables customers to test earlier and faster by combining a breadth of technology support with AI-driven capabilities to deliver the speed and resiliency required to achieve automation at scale that is tightly integrated with an organization’s current DevOps toolchain.

Key Features

- True end-to-end testing from a single tool—centralized functional and regression testing across all layers of enterprise architectures, all designed to extend tests—from the UI to the API, including web, mobile, composite and packaged apps
- Comprehensive technology stack—200+ supported apps and environments
- AI-based object recognition—learn objects like humans do, using AI-based machine learning
- Parallel testing—execute tests across distributed infrastructures and in parallel on web and mobile
- Cross-browser coverage—script once and replay all tests seamlessly across the leading browsers and browser versions, including Chrome, Firefox, Safari, IE, and Edge
- Broad ecosystem of integrations—from version control to continuous integration to agile management; includes open source, third-party, and Micro Focus solutions
- Manual test conversion—import manual tests from Micro Focus Sprinter; convert the results into reusable test automation assets for regression and integration tests

Key Benefits and Features

Accelerate End-to-End Testing of Omnichannel Apps
Dominate the tide of technologies with a single tool for end-to-end testing and integration of multiple technologies, environments, and apps.

COMPREHENSIVE TECHNOLOGY STACK
200+ supported apps and environments, including web, SAP, mainframes, Salesforce, PDF, Java, Citrix, business applications, and more.
TRUE END-TO-END TESTING FROM A SINGLE TOOL
Centralize functional and regression testing across all layers of enterprise architectures, all designed to extend tests—from the UI to the API, including web, mobile, composite and packaged apps.

MANUAL & AUTOMATED TESTING
Design, plan, execute and analyze of all your manual and automated testing efforts in a single solution.

SAP TESTING
Leverage extensive support for SAPUI5 objects and methods, SAP Web Dynpro, ABAP, and the SAP NWBC Desktop application.

Boost Productivity with Intelligent Automation
UFT One’s intelligent automation capabilities enable teams using UFT One to accelerate the creation of automation assets and reduce the maintenance effort required to match the pace of application changes.

AI-BASED OBJECT RECOGNITION
Learn objects like humans do—using AI-based machine learning, advanced image-based OCR (ABBYY, Google Tesseract), and custom extensibility to recognize third-party controls.

COMPUTER VISION / IMAGE-BASED PROCESSING
Keep up with unpredictable UI changes by learning objects like humans do—through image-based automation, visual anchors, and embedded OCR (Optical Character Recognition) with either the ABBYY OCR engine or the Google Tesseract OCR engine.

MACHINE-DRIVEN REGRESSION TESTING
Find anomalies easily, such as latency issues, scripting errors, visual regressions, broken links, and more.

COGNITIVE ANALYSIS / TEXT ANALYSIS
Extract text and data values directly from an app for analysis, or collect analog text directly from images.

SYNTHETIC DATA CREATION
Create data intelligently using multiple algorithms to reduce the size of a test data set without serious loss of quality.

EMULATED BIOMETRICS
Simulate facial and fingerprint authentication methods for interactive mobile sessions.

Increase Test Coverage— from the UI to the API
Test both the front-end functionality and back-end service parts of an application. UFT One supports nearly every major software application and environment, including SAP, Oracle, Salesforce, mainframes, embedded frameworks, headless browsers, and much more.

VISUAL TEST-DRIVEN DESIGN
UFT ONE’S multi-layered interface displays both UI and API tests in an intuitive graphical canvas, providing a clear representation of the test flow. Tests are clearly diagrammed in the canvas to illustrate critical information for automating complex application compositions and orchestrated business processes—all with corresponding actions, activities, and parameters to provide clarity of test logic and flow.

API TESTING WITHOUT EXTENSIVE CODING
UFT One API and Web services testing capabilities give teams an extensible framework for creating and executing functional tests of “headless” applications or the non-GUI parts of an application. With an easy-to-use, visual interface, UFT One provides the ability to test at the headless layer without the need for extensive coding.

Test at the headless layer with UFT One’s collection of built-in standard activities, such as file and string manipulation, data conversion, and messaging. For time-bound projects, import your existing resources (SoapUI, WSDL, WADL, Swagger, OData) and let UFT One automatically generate API tests for you. Define which critical aspects to test: positive, boundary, security, and/or compliance. UFT One also supports enterprise businesses using cutting-edge IoT technologies with support for MQTT and CoAP. And let’s not forget UFT One’s extensive support for creating and importing REST service models, as well as sending and receiving a JSON request for REST API services.

Efficiency at Scale—Test More Per Cycle in Less Time
Achieve test execution at full velocity. Burst tests across distributed functional testing infrastructures and run tests at scale with full parallel, cross-browser and cross-device mobile testing.

PARALLEL TESTING
The run-time engine in UFT One allows for parallel execution on different platforms, mobile devices and servers (real and virtual) without the need for a full UFT One license or installation. Execute up to four tests on the latest versions of Windows, Linux and MacOS.

CROSS-BROWSER COVERAGE
Script once and replay all tests seamlessly across the leading browsers and browser versions, including Chrome, Firefox, Safari, IE, and Edge. Tests can be recorded on one browser and the same script can be used with no adaptations to test multiple browsers and configurations. If desired, the same test run can cover all the different browsers by having each test iteration executed on a different browser, with one report covering the test flow status on all desired configurations.

CLOUD-BASED DEPLOYMENT
To expand your footprint, simply deploy UFT One in the cloud on your provisioned Citrix, AWS, and Azure virtual environments.
Control, Communicate & Collaborate
Break down silos and ensure a steady flow of information between teams, sharing insights across teams to avoid unnecessary duplication of efforts. Enable a collaborative approach to test automation by supporting a wide range of roles, such as business analysts, test automation engineers and developers, ensuring a bidirectional communication between business teams and QA teams.

ROBUST REPORTING
Report QA results using a variety of tools across multiple teams and locations. Provide positive test reports to ensure quality and compliance mandates are being met.

RESULTS-DRIVEN REPORTS AND VITALS MONITORING
Include HTML results in PDF, which creates a sharable PDF of HTML-based results.

STATISTIC INDICATOR
Get statistics about which steps passed or failed and receive warnings during the test run.

Eliminate Bottlenecks with an Extensible DevOps Ecosystem
From version control to continuous integration to agile management, UFT One’s broad ecosystem of integrations include open source, third-party, and Micro Focus solutions that support multiple testing strategies, eliminate bottlenecks, and gain efficiencies across the lifecycle.

OPEN ARCHITECTURE
Use UFT One’s add-in extensibility to integrate with open source, third-party, custom controls, and other Micro Focus solutions.

SHIFT-LEFT TESTING WITH UFT DEVELOPER®
Increase productivity with a shift-left test automation tool created for Developers using the IDE, language and testing framework of choice to create tests at the same time the application is being developed. Also, support Developer / QA collaboration by converting UFT One object repositories to UFT Developer application models, or by converting UFT Developer application models to UFT One object repositories. *The UFT One license can be exchanged for a UFT Developer license at no additional cost.

SHIFT-RIGHT TESTING WITH BPT
Use the Micro Focus Business Process Testing (BPT) framework for keyword-driven and scriptless automation of web, desktop, and packaged applications such as Oracle, PeopleSoft, and SAP. Through the creation of reusable business process components, capture flows directly from the application screens and leverage UFT One’s robust record/replay capturing technology.

MOBILE TESTING ON LOCAL DEVICES
The UFT Mobile Add-in for Local Devices integrates UFT One and mobile devices connected directly to the UFT One host machine. In just a few steps, UFT One users can start designing and running mobile app and web tests on local mobile devices without purchasing an additional license. This type of tight integration allows UFT One users to execute omnichannel content strategies using the same script for desktop and mobile web, support mobile testing in companies that do not yet have a lab management solution in place, or run mobile tests without requiring a new tool for mobile devices.

SERVICE VIRTUALIZATION
UFT One is also fully integrated with Micro Focus Service Virtualization, enabling application teams to easily create virtual services that can replace targeted services in a composite application or multi-step business process. By accurately simulating the behavior of the actual component, it enables developers and testers to begin performing functional or performance testing right away, in parallel—even when the real services are not available, when data access is restricted, when data is difficult to attain, or when the services are not suitable for the particular test. With UFT One’s integration to Service Virtualization, automated testing teams can achieve delay-free continuous testing with improved test coverage and fewer defects in production.

REAL-TIME COLLABORATION WITH MICRO FOCUS APPLICATION LIFECYCLE MANAGEMENT
Functional and regression tests can be triggered as part of the regular build process, with results reported in Application Lifecycle Management (ALM) and teams being instantly alerted to issues in order to keep the agile timeline on track. This means UFT One facilitates collaboration among teams through its shared application object definitions, thereby keeping changes to test objects synchronized throughout the test creation process.

System Requirements

**Supported GUI Technologies**
- Web, Java, .NET, Flex, Oracle, SAP, PeopleSoft, Siebel, Delphi, Terminal Emulators, PowerBuilder, Stingray, VisualAge, QT, and more

**UFT Minimum System Requirements**
- **Host Processor:** 3 GHz or higher
- **Operating System:** Windows 7 Service Pack 1 (32-bit or 64-bit)
- **Memory:** 4 GB
- **Hard Disk Drive:** 7,200 RPM
- **Color Settings:** High color (16-bit)
- **Graphics Card:** Graphics card with 64 MB video memory
- **Free Hard Disk Space:** 20 GB of free disk space for application files and folders

www.microfocus.com
“The use of headless browsers (i.e. browsers without a graphical user interface) helps us run our test automation scripts without even rendering them on a screen. This allows us to reduce our regression test time by 70 percent, time we can use to execute deeper and broader application tests.”

HEMANT ANUGONDA
