

What's New in Micro Focus Connect 1.5

Micro Focus® Connect provides a plug-in framework for integrating your existing tools and assets into StarTeam. Get connected and take advantage of a robust and scalable platform for coordinating and managing the entire software delivery process, across diverse methodologies and distributed teams.

Key Features

Configuration UI Updates

Connect started shipping with a fully enabled web UI for configuring synchronizations between the Micro Focus Hub and other data sources in Connect 1.4. With Micro Focus Connect 1.5, we added further improvements to the web UI such as the ability to configure User Maps which was previously only available in the XML configuration directly. User Maps allow customers to link specific users across connected Data Sources when different usernames are used for access to the systems.

Connector Certification Support

All certified Connectors posted on the community can now be driven via the Micro Focus Connect UI and unless otherwise stated in the

Connector readme they provide drop down options for field and project mapping selection rather than requiring the user to manually type the appropriate names. This is not only helpful in helping to expedite the mapping of a configuration but also reduces the chance of error during manual entry.

Find out more about current connectors and how to create your own at: http://community.microfocus.com/borland/managetrack/borland_connect/
