“This Service Description describes the components and services included in Micro Focus Advanced Authentication Software-as-a-Service (which also may be referred to as “AA SaaS”). Unless otherwise agreed to in writing this Service Description is subject to the Micro Focus Customer Terms for Software-as-a-Service or the applicable Micro Focus Pass-Through Terms and represents the only binding terms governing Micro Focus International plc and its affiliates (“Micro Focus”) respective obligations regarding its provision of this SaaS to the end-user customer. Any other descriptions of the features and functions of the SaaS, public statements, including advertisements, shall not be deemed as additional features or functionalities that Micro Focus is required to deliver.”
**Standard Service Features**

**High Level Summary**

Micro Focus Advanced Authentication Software-as-a-Service (AA SaaS) is a cloud-based Multi-Factor Authentication (MFA) framework that provides increased security through standard, adaptive and continuous authentication services.

**SaaS service delivery components**

**SaaS Delivery Components**

<table>

**Architecture Components**

Micro Focus AA SaaS consists of these two (2) parts: (a) a cloud based management platform with an interactive dashboard for management and reporting; and (b) an MF SaaS-provided workstation components (Windows, Linux, and MAC client, device services, and OTP workstation generator installed by you, to monitor the application in real-time.

Micro Focus deploys the Micro Focus AA SaaS using shared infrastructure platform, monitors the system for 24x7 availability, and provides related 24x7 infrastructure support, including application version upgrades. The customer accesses Micro Focus AA on SaaS application through the Internet (HTTPS).

Onsite components are installed and configured by the customer or customer-contracted consultants. Micro Focus does not operate onsite components or third-party integrations on behalf of the customer and will not commit to any SLO for these services.

**Application Administration**

The Customer will access Micro Focus AA SaaS using a web browser and the URLs provided to them. Once securely logged in, the Customer can perform administrative tasks such as configuring, assigning authentication requirements to events, and running and scheduling backups.

**Service Monitoring**

Micro Focus monitors components of AA SaaS for 24x7 availability. Micro Focus uses a centralized notification system to deliver proactive communications about application changes, outages and scheduled maintenance.

**Capacity and Performance Management**

AA SaaS will be continually monitored for performance issues. Proactive capacity and performance management procedures are in place to ensure the architecture of the environment meets the needs of its customers.

**Operational Change Management**

Micro Focus follows a set of standardized methodologies and procedures for efficient and prompt handling of changes to SaaS infrastructure and application, which enables beneficial changes to be made with minimal disruption to the service.

**Solution Data Backup and Retention**

The data backup and retention described in this section are part of Micro Focus’s overall business continuity management practices designed to attempt to recover availability to customers of AA SaaS, following an outage or similar loss of service.
Disaster Recovery

1. Business Continuity Plan
Micro Focus SaaS continuously evaluates different risks that might affect the integrity and availability of Micro Focus SaaS. As part of this continuous evaluation, Micro Focus SaaS develops policies, standards and processes that are implemented to reduce the probability of a continuous service disruption. Micro Focus documents its processes in a business continuity plan (“BCP”) which includes a disaster recovery plan (“DRP”). Micro Focus utilizes the BCP to provide core Micro Focus SaaS and infrastructure services with minimum disruption. The DRP includes a set of processes that Micro Focus SaaS implements and tests Micro Focus SaaS recovery capabilities to reduce the probability of a continuous service interruption in the event of a service disruption.

2. Backups
Micro Focus SaaS utilizes cloud-native functions such as replication between primary and secondary availability zones to ensure data availability and recoverability. All replicas reside within the same governmental compliance boundary to ensure adherence to all applicable data residency regulations. Real-time replication is used between primary and standby nodes to facilitate an RPO of 2 hours. No removable media is used at any time to ensure the protection of customer data.

SaaS Security
Micro Focus maintains an information and physical security program designed to protect the confidentiality, availability and integrity of Customer Personal Data and confidential information (the “Micro Focus Security Program”).

Organizational Measures
This section describes Micro Focus’s standard technical and organizational measures, controls and procedures, which are intended to help protect the Customer-provided SaaS Data. Micro Focus regularly tests and monitors the effectiveness of its controls and procedures. No security measures are or can be completely effective against all security threats, present and future, known and unknown. The measures set forth in this section may be modified by Micro Focus, but represent a minimum standard. Customer remains responsible for determining the sufficiency of these measures.

Physical Access Controls
Micro Focus maintains physical security standards designed to prohibit unauthorized physical access to the Micro Focus equipment and facilities used to provide SaaS and include Micro Focus data centers and data centers operated by third parties. This is accomplished through the following practices:

- presence of on-site security personnel on a 24x7 basis;
- use of intrusion detection systems;
- use of video cameras on access points and along perimeter;
- Micro Focus employees, subcontractors and authorized visitors are issued identification cards that must be worn while on premises;
- monitoring access to Micro Focus facilities, including restricted areas and equipment within facilities;
- securing equipment hosting Customer-provided SaaS Data in designated caged areas; and maintaining an audit trail of access.
Access Controls

Micro Focus maintains the following standards for access controls and administration designed to make Customer-provided SaaS Data accessible only by authorized Micro Focus personnel who have a legitimate business need for such access:

- secure user identification and authentication protocols;
- Customer provided SaaS data is accessible only by authorized Micro Focus personnel who have a legitimate business need for such access, with user authentication, sign-on and access controls;
- employment termination or role change is conducted in a controlled and secured manner;
- administrator accounts should only be used for the purpose of performing administrative activities;
- each account with administrative privileges must be traceable to a uniquely-identifiable individual;
- all access to computers and servers must be authenticated and within the scope of an employee’s job function;
- collection of information that can link users to actions in the Micro Focus SaaS environment;
- collection and maintenance of log audits for the application, OS, DB, network and security devices according to the baseline requirements identified;
- restriction of access to log information based on user roles and the “need-to-know;” and prohibition of shared accounts.
- use of multi-factor authentication to provide state-of-the-art access to the SaaS systems.

Availability Controls

Micro Focus’s business continuity management process includes a rehearsed method of restoring the ability to supply critical services upon a service disruption. Micro Focus’s continuity plans cover operational shared infrastructure such as remote access, active directory, DNS services, and mail services. Monitoring systems are designed to generate automatic alerts that notify Micro Focus of events such as a server crash or disconnected network.

Controls regarding disruption prevention include:

- uninterruptible power supplies (UPS) and backup power generators;
- at least two independent power supplies in the building; and
- robust external network connectivity infrastructure.

Data Segregation

Micro Focus SaaS environments are segregated logically by Micro Focus SaaS access control mechanisms. Internet-facing devices are configured with a set of access control lists (ACLs), which are designed to prevent unauthorized access to internal networks. Micro Focus uses security solutions on the perimeter level such as: firewalls, IPS/IDS, proxies and content based inspection in order to detect hostile activity in addition to monitoring the environment’s health and availability.

Data Encryption

Micro Focus SaaS uses industry standard techniques to encrypt Customer-provided SaaS Data in transit. All inbound and outbound traffic to the external network is encrypted.
Audit

Micro Focus appoints an independent third party to conduct an annual audit of the applicable policies used by Micro Focus to provide the applicable Micro Focus AA SaaS solution. A summary report or similar documentation will be provided to Customer upon request. Subject to the execution of Micro Focus’s standard confidentiality agreement, Micro Focus agrees to respond to a reasonable industry standard information security questionnaire concerning its information and physical security program specific to Micro Focus SaaS provided pursuant to the applicable Supporting Material no more than once per year. Such information security questionnaire will be considered Micro Focus Confidential Information.

Micro Focus Security Policies

Micro Focus regularly re-evaluates and updates its information and physical security program as the industry evolves, new technologies emerge or new threats are identified.

Security Incident Response

In the event Micro Focus confirms a security incident resulted in the loss, unauthorized disclosure or alteration of Customer-provided SaaS Data (“Security Incident”), Micro Focus will notify Customer of the Security Incident and work to mitigate the impact of such Security Incident. Should Customer believe that there has been unauthorized use of Customer’s account, credentials, or passwords, Customer must immediately notify Micro Focus Security Operations Center via cyberressec@microfocus.com.

Micro Focus Employees and Subcontractors

Micro Focus requests that all employees involved in the processing of Customer-provided SaaS Data are authorized personnel with a need to access the Customer-provided SaaS Data, are bound by appropriate confidentiality obligations and have undergone appropriate training in the protection of customer data. Micro Focus requests that any affiliate or third party subcontractor involved in processing Customer-provided SaaS Data enters into a written agreement with Micro Focus, which includes confidentiality obligations substantially similar to those contained herein and appropriate to the nature of the processing involved.

Data Subject Requests

Micro Focus will, within three (3) business days of receipt, refer to Customer any queries from data subjects in connection with Customer-provided SaaS Data.

Scheduled Maintenance

To enable Customers to plan for scheduled maintenance by Micro Focus, Micro Focus reserves predefined timeframes to be used on an as-needed basis.

A twenty-four-hour period once a quarter starting at Saturday, midnight in the local data center region, and ending at Sunday, midnight.

- This window is considered an optional placeholder for major releases and events that could be significantly service impactful. If the window is to be exercised, and a major disruption expected, all customers should be notified no later than ten business days before.
A two-hour maintenance window once a month starting Thursday, midnight in the local data center region.

- This is for patching of environments. Patching should be done in a non-service disrupting fashion; however, some elements may require a brief outage to update properly. Customers will be notified at least five business days in advance if any actual service disruption is expected.

A four-hour maintenance window once a month starting Saturday, midnight in the local data center region.

- This time is set aside for system updates and product releases that cannot be performed without a visible customer impact. Use of this window is optional, and customers should be notified at least ten business days in advance if any outage is expected.

In case of any holiday conflicts, the regularly scheduled window will automatically fall to the following week on the same day of the week.

Micro Focus determines whether and when to apply a SaaS Upgrade to Customer’s Micro Focus AA SaaS solution and IAM SaaS Common Components. Unless Micro Focus anticipates a service interruption due to a SaaS Upgrade, Micro Focus may implement a SaaS Upgrade at any time without notice to Customer. Micro Focus aims to use the Scheduled Maintenance windows defined herein to apply SaaS Upgrades. Customer may be required to cooperate in achieving a SaaS Upgrade that Micro Focus determines in its discretion is critical for the availability, performance or security of Micro Focus AA SaaS solution and the IAM SaaS Common Components.

Service Decommissioning

Customer may cancel Micro Focus SaaS by providing Micro Focus with thirty (30) days written notice prior to the expiration of the SaaS Order Term (“Cancellation”). Such Cancellation shall be effective upon the last day of the then current SaaS Order Term. Upon Cancellation, expiration, or termination of the SaaS Order Term, Micro Focus may disable all Customer access to Micro Focus AA SaaS solution, and Customer shall promptly return to Micro Focus (or at Micro Focus’s request destroy) any Micro Focus Materials.

Micro Focus will make available to Customer such data in the format generally provided by Micro Focus. The target timeframe is set forth below in Termination Data Retrieval Period SLO. After such time, Micro Focus shall have no obligation to maintain or provide any such data, which will be deleted in the ordinary course.

Service Level Objectives

Micro Focus provides the following Service Level Commitments for the purpose of further measuring the quality of service that Micro Focus is delivering to the Customer.

1. Solution Provisioning Time SLO

Solution Provisioning is defined as the Micro Focus AA SaaS solution being available for access over the internet. Micro Focus targets to make Micro Focus AA SaaS available within five (5) business day of the customer’s purchase order (PO) being booked within the Micro Focus order management system.
2. **Solution Availability SLA**

Solution Availability is defined as the Micro Focus AA SaaS production application being available for access and use by Customer and its Authorized Users over the Internet. Micro Focus will provide Customer access to the Micro Focus AA SaaS production application on a twenty-four hour, seven days a week (24x7) basis at a rate of 99.5% (“Solution Uptime”).

3. **Measurement Method**

On a quarterly basis, the availability of the IG SaaS customer instance will be measured using the measurable days in the quarter (total days minus planned downtime, including maintenance, upgrades, etc.) as the denominator. The numerator is the denominator minus the number of days where a tenant’s deadline is not met, to give the percentage of days that met the SLA (e.g. 119 days / 120 possible days = 99% availability). All SaaS monitoring will be paused at the beginning of each scheduled maintenance window and restarted at the completion of the window.

An “outage” is defined as two consecutive monitor failures within a five-minute period, lasting until the condition has cleared.

4. **Boundaries and Exclusions**

Solution Uptime shall not apply to any of the following exceptions:
- Overall Internet congestion, slowdown, or unavailability
- Unavailability of generic Internet services (e.g. DNS servers) due to virus or hacker attacks
- Force majeure events as described in the terms of the SaaS agreement
- Actions or omissions of Customer (unless undertaken at the express direction of Micro Focus) or third parties beyond the control of Micro Focus
- Unavailability due to Customer equipment or third-party computer hardware, software, or network infrastructure not within the sole control of Micro Focus
- Scheduled Maintenance
- Scheduled Version Updates

**Termination Data Retrieval Period SLO**

The Termination Data Retrieval Period is defined as the length of time in which the customer can retrieve a copy of their customer Micro Focus AA SaaS data from Micro Focus. Micro Focus targets to make available such data for download in the Micro Focus AA SaaS format generally provided by Micro Focus for 30 days following the termination of the SaaS Order Term.

**Service Level Commitments**

5. **Reporting**

Micro Focus Customer Success Manager (CSM) and the Customer will schedule and conduct regular Quarterly Business Reviews (QBR). for the purpose of reviewing the Customer’s business objectives, the service performance, service usage, roadmap updates and planned continuous improvement initiatives. The CSM and the Customer will agree the meeting agenda in advance and will record agreed actions and priorities.
**Standard Service Requirements**

**Roles and Responsibilities**

This section describes general Customer and Micro Focus responsibilities relative to the Micro Focus AA SaaS service. Micro Focus’s ability to fulfill its responsibilities relative to SaaS is dependent upon Customer fulfilling the responsibilities described below and elsewhere herein:

**Customer Roles and Responsibilities**

## Assumptions and Dependencies

This Service Description is based upon the following assumptions and dependencies between the Customer and Micro Focus:

- Customer must have internet connectivity to access this Micro Focus AA SaaS Service.
- Micro Focus AA SaaS Service will be performed remotely and delivered in English only.
- A SaaS Order term is valid for a single application deployment, which cannot be changed during the SaaS Order term.
- The service commencement date is the date on which Customer’s purchase order (PO) is booked within the Micro Focus order management system.
- The import of Customer data into the Micro Focus AA SaaS solution during the implementation requires that the information is made available to Micro Focus at the appropriate step of the solution implementation and in the Micro Focus designated format.
- Customer must ensure that its administrators maintain accurate contact information with Micro Focus SaaS.
- Customer has determined, selected, and will use options in the Customer environment that are appropriate to meet its requirements, including information security controls, connectivity options, and business continuity, backup and archival options.
- Customer will establish and follow secure practices for individual account-based access for accountability and traceability.

AA SaaS Service is provided based on the assumption that Customer will implement and maintain the following controls in its use of Micro Focus AA SaaS Service:

- Configuring Customer’s browser and other clients to interact with Micro Focus AA SaaS Service
- Configuring Customer’s network devices to access Micro Focus AA SaaS Service
- Appointing authorized users
• Configuring its Micro Focus AA SaaS Service account to require that end user passwords are sufficiently strong and properly managed.
• Procedures for access approvals, modifications and terminations.

**Good Faith Cooperation**

Customer acknowledges that Micro Focus’s ability to perform the Services depends upon Customer’s timely performance of its obligations and cooperation, as well as the accuracy and completeness of any information and data provided to Micro Focus. Where this Service Description requires agreement, approval, acceptance, consent or similar action by either party, such action will not be unreasonably delayed or withheld. Customer agrees that to the extent its failure to meet its responsibilities results in a failure or delay by Micro Focus in performing its obligations under this Service Description, Micro Focus will not be liable for such failure or delay.
