

Micro Focus IT Operations Management (ITOM) and Application Delivery Management (ADM) achieve international security certification

Benefits

Our ISO 27001:2013 certification demonstrates that we implement and maintain the highest security standards in our Enterprise Software Security & Trust Office to assure secure delivery of our software products.

With cyber-attacks becoming more frequent-and more damaging-you need to know that the products and services your enterprise relies on have been designed and developed in a secure development environment that minimizes security threats and resulting business impacts.

Micro Focus ITOM and ADM business units, which enable our Enterprise Security & Trust Office, provide that assurance now, with our certification as compliant with security and software privacy established by the respected International Organization for Standardization (ISO).

Our ISO 27001:2013 certification demonstrates that we implement and maintain the highest security standards in our Enterprise Software Security & Trust Office to assure secure delivery of our software products. Under ISO 27001:2013, we are required to develop, operate, monitor, review and improve an information security management system (ISMS) based on the model provided by the ISO.

By adopting this ISMS, we committed to use the ISO standard guidelines to create security and privacy controls for our business processes. We also agreed to use the ISO guidelines as a baseline for operating a security program for our day-to-day activities, including developing and delivering secure products through our Security & Trust Office.

The certification demonstrates to you and all our customers that our products and services include risk-driven security controls that can help protect your data against ever-changing cyber-threats and vulnerabilities.

To earn this sought-after certification, we passed a rigorous review conducted by KPMG Audit Plc. and were found to comply with the information security requirements established by ISO and the International Electro technical Commission (IEC).

The integrity, availability, and confidentiality of your information is critical, not just to you but to us as well. That's why Micro Focus ITOM and ADM are constantly improving our security service through an on-going risk analysis.

To find out more about what we're doing to help protect your data, contact your Micro Focus sales team member, or visit [Security & Trust Office](#)
