Service Description

Micro Focus ArcSight Intelligence on Software-as-a-Service

September 2020
“This Service Description describes the components and services included in Micro Focus ArcSight Intelligence Software-as-a-Service (which also may be referred to as “SaaS”). Unless otherwise agreed to in writing this Service Description is subject to the Micro Focus Customer Terms for Software-as-a-Service or the applicable Micro Focus Pass-Through Terms and represents the only binding terms governing Micro Focus International plc and its affiliates (“Micro Focus”) respective obligations regarding its provision of this SaaS to the end-user customer. Any other descriptions of the features and functions of the SaaS, public statements, including advertisements, shall not be deemed as additional features or functionalities that Micro Focus is required to deliver.”
Standard Service Features

High Level Summary

ArcSight Intelligence provides a security analytics capability, previously known as Interset Security User Entity Behavioral Analytics (UEBA), whereby entities such as user accounts, workstations, and servers, are scored for risk based on the scope and scale of anomalies observed. It uses online unsupervised machine learning, which means that the solution automatically builds baseline data for all behaviors being monitored (aka, models). The actual models that are triggered are determined by the type of data being ingested as well as the data attributes that are present in the data.

The unsupervised machine learning approach is ideally suited to help threat hunters find insider threats and external advanced threats (such as nation-state attacks) that manifest as internal threats. This is because the nature of these types of advanced threats is such that an exhaustive set of examples cannot practically be described. This makes these types of threats impossible to find with supervised machine learning.

Offering Options

This offering’s options are EDR, Limited and Full:

- EDR: One single EDR data source.
- Limited: Choice of up to four standard data sources.
- Full: This SKU provides support for up to 10 standard Data Sources and EDR, in any combination.

Definitions

Data Type - A category of log data emitted by a set of technologies that have a common goal. These category types are usually part of a common market.

Data Source - A technology that emits log data that fits into a particular data type. Typically the name of a vendor or product name that is categorized within that market.

Example: Microsoft Active Directory and Micro Focus NetIQ Access Manager are Data Sources. These two data sources emit log data that fits into the Identity store Data Type.

Standard Data Types – These are traditional log sources that are typically found in SIEM. These typically represent explicit actions by a user/user account. Data from this category are generally not overly dense.

Standard data types include:
- Endpoint DLP
- Repository
- Identity Store
- FileShare Auth
• Resource Auth
• VPN Auth
• Printer
• Proxy
• Email
• Expense

Other Data Types include EDR, which is a discrete option within this offering, and NetFlow, which is not currently supported in this offering.

**SaaS Service Delivery Components**

**SaaS Delivery Components**

**Architecture Components**

The ArcSight Intelligence as a Service Offering is a SaaS-based analytics engine that consumes IT security event logs, analyses those events for risky, unusual behaviors, and provides daily results back. Logs are periodically sent to the analytic engine for analysis, and analytical results are published daily via the ArcSight Intelligence UI for exploration.
The ArcSight Intelligence as a Service offering is a multi-tenant environment, meaning that each customer receives their own unique tenant. This tenant segregates and secures their analyses and underlying data from all other tenants.

**Data Ingest**

**ArcSight Smart Connectors**

ArcSight uses smart connectors within the environment, configuration changes can be made to include an additional destination for the data sources in question. The destination will be a web accessible storage location that is available via the Cloud instance of the ArcSight Intelligence tenant that has been made available.

**Data Output**

**Analytical Results Delivery**

The ArcSight Intelligence as a Service application performs its analysis once a day. These results include:

- entity risk scores
- anomalous events
- descriptions and visualizations for anomalous events

Once the data sources are identified and set up to be collected by ArcSight Intelligence, the Analytics process will run. The Analytics process will generate a number of outputs. The main outputs are the most Risky Entities ranked by risk score, along with the anomalies that impact the entity risk scores. Also contained in the output are the identified events that participated in the raising of these risk scores. This data can be fed back in to the Customers SIEM Log Management or Threat Hunting platforms. For example, Analytics data can be feed directly into ArcSight ESM, adding valuable context to ESM’s correlation engine.

**Application Administration**

All data provided to the ArcSight Intelligence as a Service will be considered Customer-provided SaaS Data per the Micro Focus Customer SaaS Terms. Micro Focus is not responsible for the accuracy of the data provided by the customer. The analysis will be performed remotely and delivered in English only.

**Analytical Results Delivery**

The ArcSight Intelligence as a Service application performs its analysis once a day. These results include:

- entity risk scores
- anomalous events
- descriptions and visualizations for anomalous events

**Service Components**

The Customer may contact Micro Focus via a dedicated email address cyberressuport@microfocus.com. The Micro Focus Support Team will either provide support to the Customer directly or coordinate delivery of this
support. The severity of the request determines the response and resolution time. Online support and product documentation are available at the ArcSight Intelligence support site locations.

- Standard support is available to users which allows for the logging of online issues as well as the ongoing management of issues and exchange of information
- Support is for contracted service only and does not include custom integrations
- Support focus is on a break fix philosophy
- Standard support is on an as needed per SLA basis
- Additional Premium support is also available
- All support provided remotely

**Service Monitoring**

Micro Focus monitors ArcSight Intelligence as a Service solution components for 24x7 availability. Micro Focus uses a centralized notification system to deliver proactive communications about application changes, outages and scheduled maintenance.

**Capacity and Performance Management**

The ArcSight Intelligence as a Service SaaS environment is continually monitored for performance status. Proactive capacity and performance management procedures are in place to ensure the architecture of the environment meets the needs of its customers. The architecture allows for addition of capacity to applications, databases and storage.

**Operational Change Management**

Micro Focus follows a set of standardized methodologies and procedures for efficient and prompt handling of changes to SaaS infrastructure and application, which enables beneficial changes to be made with minimal disruption to the service. Changes to production environments are tested and reviewed prior to implementation to ensure they are appropriately scheduled and tested before promotion to production.

**Solution Data Backup and Retention**

The data backup and retention described in this section are part of Micro Focus’s overall business continuity management practices designed to attempt to recover availability to Customer of ArcSight Intelligence as a Service application and access to the ArcSight Intelligence as a Service application, following an outage or similar loss of service.

The Data Backup Frequency is one (1) day and Micro Focus performs that daily backup of the ArcSight Intelligence as a Service tenant metadata and configuration data, event data and analytical results. The Backup Retention Time is thirty (30) days, meaning Micro Focus retains each daily backup for the most recent thirty (30) days (“Data Retention Time”).

Micro Focus’s standard storage and backup measures are Micro Focus’s only responsibility regarding the retention of this data, despite any assistance or efforts provided by Micro Focus to recover or restore Customer’s data.
Disaster Recovery

1. Business Continuity Plan
Micro Focus SaaS continuously evaluates different risks that might affect the integrity and availability of Micro Focus SaaS. As part of this continuous evaluation, Micro Focus SaaS develops policies, standards and processes that are implemented to reduce the probability of a continuous service disruption. Micro Focus documents its processes in a business continuity plan (“BCP”) which includes a disaster recovery plan (“DRP”). Micro Focus utilizes the BCP to provide core Micro Focus SaaS and infrastructure services with minimum disruption. The DRP includes a set of processes that Micro Focus SaaS implements and tests Micro Focus SaaS recovery capabilities to reduce the probability of a continuous service interruption in the event of a service disruption.

2. Backups
Micro Focus SaaS performs both on-site and off-site backups with a 48 hours recovery point objective (RPO). Backup cycle occurs daily where a local copy of production data is replicated on-site between two physically separated storage instances. The backup includes a snapshot of production data along with an export file of the production database. The production data is then backed up at a remote site. Micro Focus uses storage and database replication for its remote site backup process. The integrity of backups are validated by (1) real time monitoring of the storage snapshot process for system errors, (2) validating CHECKSUM at the end of a backup process to assure the same number of bits exists on both source and destination storage systems, and (3) annual restoration of production data from an alternate site to validate both data and restore flows integrity.

SaaS Security
Micro Focus maintains an information and physical security program designed to protect the confidentiality, availability and integrity of Customer Personal Data and confidential information (the “Micro Focus Security Program”).

Technical and Organizational Measures
This section describes Micro Focus’s standard technical and organizational measures, controls and procedures, which are intended to help protect the Customer-provided SaaS Data. Micro Focus regularly tests and monitors the effectiveness of its controls and procedures. No security measures are or can be completely effective against all security threats, present and future, known and unknown. The measures set forth in this section may be modified by Micro Focus, but represent a minimum standard. Customer remains responsible for determining the sufficiency of these measures.

Physical Access Controls
Micro Focus maintains physical security standards designed to prohibit unauthorized physical access to the Micro Focus equipment and facilities used to provide SaaS and include Micro Focus data centers and data centers operated by third parties. This is accomplished through the following practices:
- presence of on-site security personnel on a 24x7 basis;
- use of intrusion detection systems;
- use of video cameras on access points and along perimeter;
- Micro Focus employees, subcontractors and authorized visitors are issued identification cards that must be worn while on premises;
- monitoring access to Micro Focus facilities, including restricted areas and equipment within facilities;
• Securing equipment hosting Customer-provided SaaS Data in designated caged areas; and maintaining an audit trail of access.

**Access Controls**

Micro Focus maintains the following standards for access controls and administration designed to make Customer-provided SaaS Data accessible only by authorized Micro Focus personnel who have a legitimate business need for such access:

• secure user identification and authentication protocols;
• authentication of Micro Focus personnel in compliance with Micro Focus standards and in accordance with ISO27001 requirements for segregation of duties
• Customer provided SaaS data is accessible only by authorized Micro Focus personnel who have a legitimate business need for such access, with user authentication, sign-on and access controls;
• employment termination or role change is conducted in a controlled and secured manner;
• administrator accounts should only be used for the purpose of performing administrative activities;
• each account with administrative privileges must be traceable to a uniquely-identifiable individual;
• all access to computers and servers must be authenticated and within the scope of an employee’s job function;
• collection of information that can link users to actions in the Micro Focus SaaS environment;
• collection and maintenance of log audits for the application, OS, DB, network and security devices according to the baseline requirements identified;
• restriction of access to log information based on user roles and the “need-to-know,” and prohibition of shared accounts.

**Availability Controls**

Micro Focus’s business continuity management process includes a rehearsed method of restoring the ability to supply critical services upon a service disruption. Micro Focus’s continuity plans cover operational shared infrastructure such as remote access, active directory, DNS services, and mail services. Monitoring systems are designed to generate automatic alerts that notify Micro Focus of events such as a server crash or disconnected network.

Controls regarding disruption prevention include:
• uninterruptible power supplies (UPS) and backup power generators;
• at least two independent power supplies in the building; and
• robust external network connectivity infrastructure.

**Data Segregation**

Micro Focus SaaS environments are segregated logically by Micro Focus SaaS access control mechanisms. Internet-facing devices are configured with a set of access control lists (ACLs), which are designed to prevent unauthorized access to internal networks. Micro Focus uses security solutions on the perimeter level such as: firewalls, IPS/IDS, proxies and content based inspection in order to detect hostile activity in addition to monitoring the environment’s health and availability.
Data Encryption

Micro Focus SaaS uses industry standard techniques to encrypt Customer-provided SaaS Data in transit. All inbound and outbound traffic to the external network is encrypted.

Audit

Micro Focus appoints an independent third party to conduct an annual audit of the applicable policies used by Micro Focus to provide the applicable Micro Focus ArcSight Intelligence as a Service solution. A summary report or similar documentation will be provided to Customer upon request. Subject to the execution of Micro Focus’s standard confidentiality agreement, Micro Focus agrees to respond to a reasonable industry standard information security questionnaire concerning its information and physical security program specific to Micro Focus SaaS provided pursuant to the applicable Supporting Material no more than once per year. Such information security questionnaire will be considered Micro Focus Confidential Information.

Micro Focus Security Policies

Micro Focus conducts annual reviews of its policies around the delivery of SAAS against ISO 27001. Micro Focus regularly re-evaluates and updates its information and physical security program as the industry evolves, new technologies emerge or new threats are identified.

Security Incident Response

In the event Micro Focus confirms a security incident resulted in the loss, unauthorized disclosure or alteration of Customer-provided SaaS Data (“Security Incident”), Micro Focus will notify Customer of the Security Incident and work to mitigate the impact of such Security Incident. Should Customer believe that there has been unauthorized use of Customer’s account, credentials, or passwords, Customer must immediately notify Micro Focus Security Operations Center via cyberressec@microfocus.com

Micro Focus Employees and Subcontractors

Micro Focus requests that all employees involved in the processing of Customer-provided SaaS Data are authorized personnel with a need to access the Customer-provided SaaS Data, are bound by appropriate confidentiality obligations and have undergone appropriate training in the protection of customer data. Micro Focus requests that any affiliate or third party subcontractor involved in processing Customer-provided SaaS Data enters into a written agreement with Micro Focus, which includes confidentiality obligations substantially similar to those contained herein and appropriate to the nature of the processing involved.

Data Subject Requests

Micro Focus will, within three (3) business days of receipt, refer to Customer any queries from data subjects in connection with Customer-provided SaaS Data.

Scheduled Maintenance

To enable Customers to plan for scheduled maintenance by Micro Focus, Micro Focus reserves predefined timeframes to be used on an as-needed basis. Micro Focus reserves one (1) monthly twenty-four (24) hour window (Saturday 00:00 to Sunday 00:00 in the local time zone of the datacenter). These windows will be used on an as-needed basis.
Planned windows will be scheduled at least one (1) week in advance.

Scheduled Version Updates

“SaaS Upgrades” are defined as both major version updates, minor version updates and binary patches applied by Micro Focus to Customer’s Micro Focus ArcSight Intelligence as a Service solution in production. These may or may not include new features or enhancements. Micro Focus determines whether and when to develop, release and apply any SaaS Upgrade.

Customer is entitled to SaaS Upgrades as part of Micro Focus ArcSight Intelligence as a Service service unless the SaaS Upgrade introduces new functionality that Micro Focus offers on an optional basis for an additional fee.

Micro Focus determines whether and when to apply a SaaS Upgrade to Customer’s Micro Focus ArcSight Intelligence as a Service solution. Unless Micro Focus anticipates a service interruption due to a SaaS Upgrade, Micro Focus may implement a SaaS Upgrade at any time without notice to Customer. Micro Focus aims to use the Scheduled Maintenance windows defined herein to apply SaaS Upgrades. Customer may be required to cooperate in achieving a SaaS Upgrade that Micro Focus determines in its discretion is critical for the availability, performance or security of Micro Focus ArcSight Intelligence as a Service solution.

Service Decommissioning

Customer may cancel Micro Focus SaaS by providing Micro Focus with sixty (60) days written notice prior to the expiration of the SaaS Order Term (“Cancellation”). Such Cancellation shall be effective upon the last day of the then current SaaS Order Term. Upon Cancellation, expiration, or termination of the SaaS Order Term, Micro Focus may disable all Customer access to ArcSight ArcSight Intelligence as a Service SaaS solution, and Customer shall promptly return to Micro Focus (or at Micro Focus’s request destroy) any Micro Focus Materials.

Micro Focus will make available to Customer such data in the format generally provided by Micro Focus. The target timeframe is set forth below in the Termination Data Retrieval Period SLA section. After such time, Micro Focus shall have no obligation to maintain or provide any such data, which will be deleted in the ordinary course.

Service Level Commitments

Micro Focus provides the following Service Level Commitments for the purpose of further measuring the quality of service that Micro Focus is delivering to the Customer.

1. **Solution Provisioning Time SLO**

   Solution Provisioning is defined as the Micro Focus ArcSight Intelligence as a Service solution being available for access over the internet. Micro Focus targets to make Micro Focus ArcSight Intelligence as a Service on SaaS available within five (5) business days of the customer’s purchase order (PO) being booked within the Micro Focus order management system.

   Data evaluation must be performed in order to ensure proper data formatting. This work is completed during the Proof of Concept (POC) effort. Any additional evaluation and data formatting that may be
required, will be done along side the production service enablement. Regardless, of the time required to properly format the new data sources, the clock on the term of service will begin within five (5) business days of the customer’s purchase order (PO) being booked within the Micro Focus order management system.

2. Tenant Off boarding SLO
Micro Focus guarantees a tenant on boarding time of two days from the time in which the Customer submits the formal written request.

3. User Removal SLO
Micro Focus guarantees that after the completion of this request, analytical results about the removed user will no longer be stored or available within the application.

4. Analytical Results SLA
Data to analyze is moved from the customer’s environment to the ArcSight Intelligence Cloud Service via SmartConnector. This upload happens continuously, and results in the collection of data within the tenant’s storage area at a scheduled daily start time, ArcSight Intelligence will analyze the pending data from a tenant, analyze the collected data, and publish the analytical results back for consumption by the Client, within their assigned tenant.

Micro Focus guarantees that the files in the tenant’s daily set events will be analyzed and the results published to the application’s user interface before a specified time for each tenant, every 24-hour period, at least 99% of the time.

5. Measurement Method
On a quarterly basis, the availability of the Analytics Results will be measured using the measurable days in the quarter (total days minus planned downtime, including maintenance, upgrades, etc.) as the denominator. The numerator is the denominator minus the number of days where a tenant’s deadline is not met, to give the percentage of days that met the SLA (e.g. 119 days / 120 possible days = 99% availability).

6. Boundaries and Exclusions
The Analytical Results SLA Metric shall not apply in any of the following exceptions, and neither the ArcSight Intelligence as a Service will be considered unavailable nor any Service Level Failure be deemed to occur in connection with any failure to meet the requirement or impaired ability of Customer or its Authorized Users to access or use the ArcSight Intelligence as a Service solution:

- Overall Internet congestion, slowdown, or unavailability
- Unavailability of generic Internet services (e.g. DNS servers) due to virus or hacker attacks
- Force majeure events as described in the terms of the SaaS agreement
- Actions or omissions of Customer (unless undertaken at the express direction of Micro Focus) or third parties beyond the control of Micro Focus
- Unavailability due to Customer equipment or third-party computer hardware, software, or network infrastructure not within the sole control of Micro Focus
- Scheduled Maintenance
- Scheduled Version Updates
7. Reporting
Micro Focus will provide Analytical Results SLA Report (“SLA Report”) to the Customer upon request. If the Customer does not agree with the SLA Report, written notice of non-agreement must be provided to Micro Focus within fifteen (15 days) of receipt of the SLA Report.

8. Remedies
For each Service Level failure, Micro Focus will provide equivalent term as credit to the Customer based on the corresponding threshold for the Service Level failure outlined below:

<table>
<thead>
<tr>
<th>SLA</th>
<th>Service Credit*</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 99%</td>
<td>two weeks of term extension</td>
</tr>
<tr>
<td>&lt; 95%</td>
<td>one month of term extension</td>
</tr>
</tbody>
</table>

* Applied against the total Monthly Invoice amount for Services of the month in which SLA not met. If Customer elects to accept service term extension, providing this extension shall be Micro Focus’ sole obligation and Customer’s exclusive remedy shall be for any Service Level failures.

Termination Data Retrieval Period SLO
The Termination Data Retrieval Period is defined as the length of time in which the customer can retrieve a copy of their customer ArcSight Intelligence as a Service data from Micro Focus. Micro Focus targets to make available such data for download in the ArcSight Intelligence as a Service format generally provided by Micro Focus for 30 days following the termination of the SaaS Order Term.

Standard Service Requirements
Roles and Responsibilities
This section describes general Customer and Micro Focus responsibilities relative to the ArcSight Intelligence as a Service SaaS solution. Micro Focus’s ability to fulfill its responsibilities relative to SaaS is dependent upon Customer fulfilling the responsibilities described below and elsewhere herein:

Customer Roles and Responsibilities

<table>
<thead>
<tr>
<th>Customer Role</th>
<th>Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Business owner</td>
<td>• Owns the business relationship between the customer and Micro Focus</td>
</tr>
<tr>
<td></td>
<td>• Owns the business relationship with the range of departments and organizations using the ArcSight Intelligence as a Service SaaS solution</td>
</tr>
<tr>
<td></td>
<td>• Manages contract issues</td>
</tr>
</tbody>
</table>
### Subject Matter Expert
- Leverages & educates other users about the product functionality designed by the ArcSight Intelligence as a Service SaaS solution
- Provides periodic feedback to the ArcSight Intelligence as a Service Administrator

---

### Micro Focus Roles and Responsibilities

<table>
<thead>
<tr>
<th>Micro Focus Role</th>
<th>Responsibilities</th>
</tr>
</thead>
</table>
| **Primary Support Contact (PSC)**   | • Serves as the customer liaison to Micro Focus  
• Coordinates Micro Focus resources including system and process experts as necessary as well as day to day issues with the SOC staff  
• Facilitates ongoing mentoring  
• Coordinates with the customer during required and periodic maintenance  
• Oversees the customer onboarding process |
| **Service Operation Staff (SOC)**   | • Primary point of contact for service requests.  
• The Service Operations Center staff is responsible for all services such as support and maintenance, or issues regarding availability of the ArcSight Intelligence as a Service SaaS solution  
• Provides 24x7 application support |
| **Operations Staff (Ops)**          | • Monitors the ArcSight Intelligence as a Service SaaS solution for availability  
• Provides 24x7 SaaS infrastructure and application support  
• Performs system-related tasks such as backups, archiving, and restoring instances according to Micro Focus’s standard practices |

---

### Assumptions and Dependencies

This Service Description is based upon the following assumptions and dependencies between the Customer and Micro Focus:
- Customer must have internet connectivity to access this Micro Focus ArcSight Intelligence as a Service SaaS Service.
- Micro Focus ArcSight Intelligence as a Service SaaS Service will be performed remotely and delivered in English only.
- A SaaS Order term is valid for a single application deployment, which cannot be changed during the SaaS Order term.
- The service commencement date is the date on which Customer’s purchase order (PO) is booked within the Micro Focus order management system. The term of service will begin within five (5) business days of the customer’s purchase order (PO) being booked within the Micro Focus order management system.
- The service commencement date is the date on which Customer’s application / tenant is made available to its users.
- The import of Customer data into the ArcSight Intelligence as a Service SaaS solution during the implementation requires that the information is made available to Micro Focus at the appropriate step of the solution implementation and in the Micro Focus designated format.
- Customer must ensure that its administrators maintain accurate contact information with Micro Focus SaaS.
- Customer has determined, selected, and will use options in the Customer environment that are appropriate to meet its requirements, including information security controls, connectivity options, and business continuity, backup and archival options.
- Customer will establish and follow secure practices for individual account-based access for accountability and traceability.

Furthermore this Micro Focus ArcSight Intelligence as a Service is provided based on the assumption that Customer will implement and maintain the following controls in its use of Micro Focus ArcSight Intelligence as a Service:
- Appointing authorized users.
- Configuring its Micro Focus ArcSight Intelligence as a Service Service account to require that end user passwords are sufficiently strong and properly managed.
- Procedures for access approvals, modifications and terminations.

**Good Faith Cooperation**

Customer acknowledges that Micro Focus’s ability to perform the Services depends upon Customer’s timely performance of its obligations and cooperation, as well as the accuracy and completeness of any information and data provided to Micro Focus. Where this Service Description requires agreement, approval, acceptance, consent or similar action by either party, such action will not be unreasonably delayed or withheld. Customer agrees that to the extent its failure to meet its responsibilities results in a failure or delay by Micro Focus in performing its obligations under this Service Description, Micro Focus will not be liable for such failure or delay.
