Any third party software that may be provided with the Software is included for use at Your option.

LICENSED USE

Definitions.

"Collector Manager" means the component that manages data collection, monitors system status messages, and performs event filtering as needed.

"Collector" means a functional script or agent designed to collect, normalize and parse content from a variety of Devices. Collector includes collectors provided by Novell as well as collectors developed by or for You using the Collector Builder or Collector Software Development Kit (SDK).

"Collector Builder" means code with which Collectors can be built or modified using Sentinel's proprietary collector language.

"Collector Software Development Kit (SDK)" means the API with which Collectors can be built or modified using industry-standard languages.

"Device" means any single hardware device, program or application that Transports data or information directly to the Software, or indirectly to the Software through one or more Collector Managers.

"Instance" means the initial copy of the Software necessary for execution of the Software and each additional copy (or partial copy) of the Software stored or loaded in memory or virtual memory.

An Instance is considered to be a 25 EPS (Events Per Second) Instance when the copy of the Software comprising the Instance has not processed and is not processing more than 25 events per second.

An Instance is considered to be a 500 EPS (Events Per Second) Instance when the Instance is not considered to be a 25 EPS Instance and the copy of the Software comprising the Instance has not processed and is not processing more than 500 events per second.

An Instance is considered to be a 2,500 EPS (Events Per Second) Instance when the Instance is not considered to be a 25 EPS or 500 EPS Instance and the copy of the Software comprising the Instance has not processed and is not processing more than 2,500 events per second.

An Instance is considered to be a 7,500 EPS (Events Per Second) Instance when the Instance is not considered to be a 25 EPS or 500 EPS or 2,500 EPS Instance and the copy of the Software comprising the Instance has not processed and is not processing more than 7,500 events per second.

An Instance is considered to be a Non-Production Instance when the copy of the Software comprising the Instance has only been used and is only being used for standby or high availability (e.g., failover) purposes when paired with the respective production 7,500 EPS Instance, 2,500 EPS Instance, 500 EPS or 25 EPS Instance or standalone in an internal, non-production environment for testing, staging and/or development purposes.

"Sentinel™ Log Manager Server" means the following Server Components collectively: Communication Server, Data Access Service (DAS), Database, Reporting Server, and Web Server.

"Type I Device" means a single server operating system, database, point-of-sale (POS), kiosk, ATM, or other similar device; security or network device (e.g., firewalls, intrusion detection systems ("IDS"), intrusion prevention systems ("IPS"), routers, switches, etc.). Devices or software that send their event logs to a management console/device/software or syslog server are counted by the

number of primary source devices from which the logs originate. Novell applications/software and Microsoft Active Directory are also Type I Devices.

"Type II Device" means applications or operating systems on individual desktop computers (e.g., virus scanning per desktop), hand-held/portable devices, card readers/scanners, or remote sensors (e.g., in a SCADA or other distributed monitoring/control system).

"Type III Device" means an Instance of vulnerability software (e.g., Nessus).

"Type IV Device" means non-security enterprise applications (e.g., enterprise resource planning (ERP) software, email, application delivery, etc.), and non-Novell log management appliances or software, but does not include syslog servers. Additionally, a Type IV Device includes any other device that doesn't qualify as a Type I, Type II, Type III, or Type V Device.

"Type V Device" means logical partitions (LPARs) to be monitored on mainframes (e.g., RACF, TopSecret and ACF2) and mid-range servers (e.g., AS400 or HP NonStop).

"Permitted Derivative Works" means derivative works created in conformance with the license grant below.

"Transport" means to access, deliver or otherwise make information or data available to any component of the Software.

Each Instance license is accompanied by a number of applicable Type I / II Device licenses equal to the number of devices or installations of software in memory or virtual memory from which You choose to have the Sentinel Log Manager Server collect event logs. In addition, You must acquire the applicable Type IV/V Device license for each device or installation of software in memory or virtual memory from which event logs are being collected by the Sentinel Log Manager Server.
