“This Service Description describes the components and services included in Voltage Fusion (which also may be referred to as “SaaS”) and, unless otherwise agreed to in writing, is subject to the Micro Focus Customer Terms for Software-as-a-Service (“SaaS Terms”) found at <https://www.microfocus.com/en-us/legal/software-licensing>. Capitalized terms used but not defined herein shall have the meanings set forth in the SaaS Terms.

Service Description

Voltage Fusion

Standard Service Features

High Level Summary

Voltage Fusion SaaS delivers data discovery capabilities that enrich data and expose value across our Customer's deep and rich data eco-systems. Voltage Fusion is built to help **mitigate the risks associated with managing and preserving sensitive data** while containing the total cost of compliance – all from a single source in the cloud.

Voltage Fusion provides **two** levels of service:

1. **Express Edition:** multi-tenant environment geared towards project-based discovery and risk assessments. Throughput can vary, but we benchmark approximately ~250GB indexed full content analysed per day*.
2. **Dedicated Edition:** this is a private, dedicated environment geared towards large, multi-national enterprises looking to have full analysis and cloud resources devoted for their project alone. Throughput can vary, but we benchmark in upwards of 2TB full content analysed per day* and dedicated cloud instance. A dedicated cloud setup fee is required for this edition.

Customers cannot move between service editions over the span of the subscription term.

* Throughput is dependent on many factors including the location of data (on-premises vs. cloud), the customer's internet pipe to the instance, the complexity of grammars (and in some cases the specific grammars in use), customer location in relation to the cloud hosting data center, and other resources allocated on the FUSION environment.

Within each edition the Customer has access to pay-per-use base services for metadata analysis, and storage services for building a data inventory index with optional pay-per-use services included for full-content file analysis and cloud-based data discovery (via an agentless service in FUSION).

Standard Subscription Licenses:

Voltage Fusion provides monthly subscription terms (1-60 months). The service is licensed through flexible credits purchased upfront called Voltage Authorization Units (VAU). These VAUs are drawn down monthly based on utilization.

For example, if you purchased 2,500 VAUs to run your sensitive data discovery project, and after month one you used 125 VAUs, you would have 2,375 VAUs remaining for the term.

Service utilization is monitored and reported to show you (1) the amount of VAUs that have been consumed in the current month, (2) total consumption since the contract began, and (3) how many VAUs remain for the duration of the term.

Voltage Fusion maps VAUs to the following services:

Data Optimization (metadata analysis)

Data optimization is a critical stage in preparing data for clean-up, migration, and compliance related projects. Voltage Fusion metadata analysis is the first step in the processing workflow and is included in all editions of

Service Description

Voltage Fusion

Voltage Fusion. This service can be used alone or in conjunction with the Standard or Enhanced data discovery processing services.

Data Inventory and Storage

Voltage Fusion analyzes data in place without the need to collect the file itself. It builds an index, or inventory of metadata and full content, along with data enrichment tags, risk scores, and other metadata about processing and management activities. Collection is done only when “near-native” viewing is selected, or if a legal hold is placed on data and the originating repository doesn’t support a hold (e.g., CIFS File Share). Customers can choose to maintain the data inventory or run in an ephemeral mode where only the tagging and classification remain, and the content is purged from the index. This is more of a transitory index primarily used for reporting and full-text searching is not available.

Enhanced Data Discovery Processing

Enhanced data discovery processing extracts the contents of documents being analysed and that full content is indexed in the application. Full content analysis helps identify PII, PCI, PHI etc. within the content of the files. Each repository you connect to the Voltage Fusion can be configured to use various combinations of regionally and globally targeted grammars to identify sensitive data.

Cloud Data Discovery (agentless data discovery)

A Customer can use either an agentless data discovery or their on-premises connectors to collect data from a cloud-based source such as Office 365, SharePoint Online, and Google Drive. Cloud Data Discovery requires additional cloud resources to process and analyze this type of content.

Structured Data Sources

Structured data discovery can be set up and configured within Voltage Fusion to analyze structured data sources (any JDBC addressable source). Structured data adapters are provided through the on premise and cloud cluster agents.

Overview

Voltage Fusion	Express	Dedicated
Tenant	Multi-Tenant environment*	Dedicated environment*
Database table analysis – throughput**	100 Tables/24hr	500 Tables/24hr
Full content analysis – throughput**	~250GB/24hr	~2TB/24hr
Data Optimization	Pay upfront by unit *** Reported monthly	Pay upfront by unit *** Reported monthly
Enhanced Data Discovery (Processing)	Pay upfront by unit *** Reported monthly	Pay upfront by unit *** Reported monthly
Cloud Data Discovery (Agentless analysis)	Pay upfront by unit *** Reported monthly	Pay upfront by unit *** Reported monthly

Service Description

Voltage Fusion

Metadata index, Data Inventory, legal hold	Pay upfront by unit *** Reported monthly	Pay upfront by unit *** Reported monthly
Set up fees (unstructured and structured data discovery) (Billed upfront)	One-time ***	One-time ***

*Voltage Fusion SaaS offering is provisioned using a single tenant within a multi-tenant environment. Each Customer has their data logically and securely segregated in such an architecture. Each Customer is called a tenant. A dedicated environment can be purchased as part of the Dedicated edition.

**Based on a Voltage Fusion instance at full capacity where the SaaS resource pool is shared across 8-10 tenants with all analytical grammars selected.

***Unit of measure (UoM) for licensing is a unit (Voltage Authorization Units).

Additional License Components*

Optional Micro Focus products integrated with the Voltage Fusion:

Micro Focus Products	Use Case	Description
Content Manager	Data Preservation	Archive and manage business records for compliance purposes in Content Manager directly from FUSION
IDOL Media Server	OCR/Rich Media	Extract sensitive data from scanned images and rich media with Media Server integration directly from FUSION
Structured Data Manager	Database analysis	Extract sensitive data analysis from database sources with Structured Data Manager integration directly from FUSION

*Separate entitlements required

SaaS Service Delivery Components

SaaS Delivery Components	FUSION
1. Agent configuration	Optional for a Fee
2. Analytics Configuration	Optional for a Fee
3. LDAPS Directory Federation	Optional for a Fee
4. SAMLv2 Single Sign-On (SSO)	Optional for a Fee

Service Description

Voltage Fusion

5. Content Manager Integration *	Optional for a Fee
6. Custom adapters	Optional for a Fee
7. Media Server integration/configuration**	Optional for a Fee
8. Agentless, cloud-based file analysis - Office365 (OneDrive for Business, Exchange Online)	Optional for a Fee. Included in all editions.
9. Structured Data Manager	Optional for a Fee. Included in all editions.
10. Dedicated cloud instance of Voltage Fusion	Set-up fee included in Dedicated Edition.

*Supported versions: Please refer to Support Matrix documentation on the Micro Focus [documentation page for Voltage Fusion](#)

Architecture Components

Voltage Fusion consists of two parts: (1) Native cloud-based micro services and management platform with file analysis capabilities along with interactive dashboard for management and reporting; and (2) a set of on-premises agents or cloud to cloud connectors, deployed from the application to connect to the data source(s) in real-time for the purposes of collecting, extracting data for analysis, and management. These data sources can be on-premises (Exchange, SharePoint, CIFS File shares, OpenText Documentum, OpenText Extended ECM, Content Manager*) or in the cloud (Office 365).

(* Please refer to Support Matrix documentation on FUSION [documentation page](#))

Deployment and management of following on-premises agents, connectors and integrated software components is a Customer responsibility:

1. Agent and custom adapters
2. IDOL Media Server
3. Content Manager
4. Structured Data Manager

Application Administration

Voltage Fusion service offering includes the following web-based applications:

- Administration provides administration of users, user groups, and roles and permissions
- Connect provides all the means to instantiate and configure agents and connect the SaaS solution to the various data sources (repositories) and data targets. In addition, Connect lets the Customer configure how the files are analyzed for the purpose of entity extraction (grammars) and classification (tagging)
- Analyze provides dashboards, reporting, and data discovery capabilities
- Manage provides deeper analysis on a subset of the data and management of the analyzed data (e.g., secure, delete, report)

Service Description

Voltage Fusion

New services will be released over time across Voltage Fusion to support further data privacy, data security, and data protection use cases.

Voltage Fusion supports collecting, indexing, and analyzing from Customers' Exchange, SharePoint, file system, OpenText Documentum, OpenText Extended ECM and Content Manager using on-premises agents. In addition, it supports connecting directly to M365, SharePoint Online, and Google Drive.

Service Support

Customer may contact Micro Focus through submitting online support tickets or by telephone. The Micro Focus Support Team will either provide support to the Customer directly or coordinate delivery of this support.

Online support for SaaS is available at: <https://support.cyberreshelp.com>.

Email at: MFI-Cyberressupport@opentext.com

Micro Focus staffs and maintains a 24x5x52 weeks Service Operations Center with on-call coverage on weekends and holidays for Severity 1 issues which will be the single point of contact for all issues related to the support for SaaS. Customer will maintain a list of authorized users who may contact Micro Focus for support. Customer's authorized users may contact Micro Focus for support via the Web portal or telephone 24 hours a day, 7 days a week.

Severity Level	Technical Response	Update Frequency	Target For Resolution	What Qualifies?
1	Immediate	Hourly	4 hours	Total or substantial failure of service. Known or suspected security events
2	30 mins	Every 2 hours	8 hours	Significant degradation of service, major feature inability
3	4 hours	Every 8 hours	24 business hours	Performance issues outside the norm but not substantial enough to prevent usability of a feature. Issues with reports generated from within the Customer's Tenant
4	As available	As available	Determined by the Customer impact or LOE	Bugs in deployed products not substantial enough to prevent required Customer functionality from being accessible but requiring development time to resolve

Service Monitoring

Micro Focus monitors Voltage Fusion solution components 24x7 availability. Micro Focus uses a notification system to deliver proactive communications about application changes, outages, and scheduled maintenance.

Alerts and notifications are available to Customer online at: <https://support.cyberreshelp.com>

Service Description

Voltage Fusion

Capacity and Performance Management

The architecture allows for addition of capacity to applications, databases, and storage. Additional agents can be added to increase collection and extraction rates. Setup of these additional agent machines are the responsibility of the customer.

Operational Change Management

Micro Focus follows a set of standardized methodologies and procedures for efficient and prompt handling of changes to SaaS infrastructure and application, which enables beneficial changes to be made with minimal disruption to the service.

Data Backup and Retention

The data backup and retention described in this section are part of Micro Focus's overall business continuity management practices designed to attempt to recover availability to Customer of Micro Focus and access to the Customer data, following an outage or similar loss of service.

SaaS Data

The following types of SaaS Data reside in the SaaS environment:

When objects are captured by the Voltage Fusion processing agent, the extracted content and relevant metadata is transmitted to the back office for further enrichment. The end results are then held in index storage within the back office.

Optionally, you may elect to also collect data (either by choice or to enforce a hold). In this case, a copy of the original data object is then also transmitted to the back office, which will be held in object storage within the back office.

Individual tenant data is stored in separate indexes and object storage locations.

All incoming communication (from web users, on-premises agents, FTP clients, and so on) is transmitted exclusively via TLS 1.2+ using only high strength cipher suites (Encryption in Transit).

Object and volume storage containing non-ephemeral data is encrypted using the industry standard AES-256 algorithm (Encryption at Rest).

Industry standard Principle of least privilege (PoLP) is consistently applied. This is applied within the application, as well as within the back office (governing access to infrastructure resources, limiting intra-back-office communications, and so on).

Micro Focus performs a backup of SaaS Data Daily. Micro Focus retains each backup for the most recent fourteen (14) days.

Micro Focus's standard storage and backup measures are Micro Focus's only responsibility regarding the retention of this data, despite any assistance or efforts provided by Micro Focus to recover or restore Customer's data. Customer may request via a service request for Micro Focus to attempt to restore such data from Micro Focus's most current backup. Micro Focus will be unable to restore any data not properly entered

Service Description

Voltage Fusion

by Customer or lost or corrupted at the time of backup or if Customer's request comes after the 7 days data retention time of such backup.

Backups

Micro Focus SaaS utilizes cloud-native functions such as replication between primary and secondary availability zones to ensure data availability and recoverability. All replicas reside within the same governmental compliance boundary to ensure adherence to all applicable data residency regulations. Real-time replication is used between primary and standby nodes to facilitate an RPO of 2 hours (Real-time replication is used between nodes). No removable media is used at any time to ensure the protection of customer data.

Disaster Recovery

Business Continuity Plan

Micro Focus SaaS continuously evaluates different risks that might affect the integrity and availability of Micro Focus SaaS. As part of this continuous evaluation, Micro Focus SaaS develops policies, standards and processes that are implemented to reduce the probability of a continuous service disruption. Micro Focus documents its processes in a business continuity plan (BCP) which includes a disaster recovery plan (DRP). Micro Focus utilizes the BCP to provide core Micro Focus SaaS and infrastructure services with minimum disruption. The DRP includes a set of processes that Micro Focus SaaS implements and tests Micro Focus SaaS recovery capabilities to reduce the probability of a continuous service interruption in the event of a service disruption.

High Availability and Durability

Micro Focus SaaS utilizes cloud-native functions such as replication between primary and secondary availability zones to ensure data availability and recoverability. All replicas reside within the same governmental compliance boundary to ensure adherence to all applicable data residency regulations. Real-time replication is used between nodes. No removable media is used at any time to ensure the protection of Customer data.

SaaS Security

Micro Focus maintains an information and physical security program designed to protect the confidentiality, availability, and integrity of SaaS Data.

Technical and Organizational Measures

Micro Focus regularly tests and monitors the effectiveness of its controls and procedures. No security measures are or can be completely effective against all security threats, present and future, known and unknown. The measures set forth may be modified by Micro Focus but represent a minimum standard. Customer remains responsible for determining the sufficiency of these measures.

Physical Access Controls

Micro Focus maintains physical security standards designed to prohibit unauthorized physical access to the Micro Focus equipment and facilities used to provide SaaS, including Micro Focus data centers and data centers operated by third parties. This is accomplished through the following practices.

- Presence of on-site security personnel on a 24x7 basis
- Use of intrusion detection systems
- Use of video cameras on access points and along perimeter
- Micro Focus employees, subcontractors, and authorized visitors are issued identification cards that must be worn while on-premises

Service Description

Voltage Fusion

- Monitoring access to Micro Focus facilities, including restricted areas and equipment within facilities
- Maintaining an audit trail of access

Access Controls

Micro Focus maintains the following standards for access controls and administration designed to make SaaS Data accessible only by authorized Micro Focus personnel who have a legitimate business need for such access.

- Secure user identification and authentication protocols
- Authentication of Micro Focus personnel in compliance with Micro Focus standards and in accordance with ISO27001 requirements for segregation of duties
- SaaS data is accessible only by authorized Micro Focus personnel who have a legitimate business need for such access, with user authentication, sign-on and access controls
- Employment termination or role change is conducted in a controlled and secured manner
- Administrator accounts should only be used for the purpose of performing administrative activities
- Each account with administrative privileges must be traceable to a uniquely identifiable individual
- All access to computers and servers must be authenticated and within the scope of an employee's job function
- Collection of information that can link users to actions in the Micro Focus SaaS environment
- Collection and maintenance of log audits for the application, OS, DB, network, and security devices according to the baseline requirements identified
- Restriction of access to log information based on user roles and the "need-to-know"
- Prohibition of shared accounts

Availability Controls

Micro Focus's business continuity management process includes restoring the ability to supply critical services upon a service disruption. Micro Focus's continuity plans cover operational shared infrastructure such as remote access, active directory, DNS services, and mail services. Monitoring systems are designed to generate automatic alerts that notify Micro Focus of events such as a server crash or disconnected network.

Data Segregation

Micro Focus SaaS environments are segregated logically by Micro Focus SaaS access control mechanisms. Internet-facing devices are configured with a set of access control lists (ACLs), which are designed to prevent unauthorized access to internal networks. Micro Focus uses security solutions on the perimeter level such as firewalls, IPS/IDS, proxies to detect hostile activity, and monitoring the environment's health and availability.

Data Encryption

Micro Focus SaaS uses industry standard techniques to encrypt SaaS Data in transit. All inbound and outbound traffic to the external network is encrypted. Data in the relational database, index, and object storage (data at rest) is also encrypted.

Service Description

Voltage Fusion

Audit

Micro Focus appoints an independent third party to conduct an annual audit of the applicable policies used by Micro Focus to provide SaaS. A summary report or similar documentation will be provided to Customer upon request. Subject to Customer's execution of Micro Focus's standard confidentiality agreement, Micro Focus agrees to respond to a reasonable industry standard information security questionnaire concerning its information and physical security program specific to SaaS no more than once per year. Such information security questionnaire will be considered Micro Focus confidential information.

Micro Focus Security Policies

Micro Focus conducts annual reviews of its policies around the delivery of SaaS against ISO 27001. Micro Focus regularly re-evaluates and updates its information and physical security program as the industry evolves, new technologies emerge, or new threats are identified.

Security Incident Response

In the event Micro Focus confirms a security incident resulted in the loss, unauthorized disclosure, or alteration of SaaS Data ("Security Incident"), Micro Focus will notify Customer of the Security Incident and work to mitigate the impact of such Security Incident. Should Customer believe that there has been unauthorized use of Customer's account, credentials, or passwords, Customer must immediately notify Micro Focus Security Operations Center via [MFI-Cyberressupport](#)

Micro Focus Employees and Subcontractors

Micro Focus requests that all employees involved in the processing of SaaS Data are authorized personnel with a need to access the SaaS Data, are bound by appropriate confidentiality obligations, and have undergone appropriate training in the protection of Customer data. Micro Focus requests that any affiliate or third-party subcontractor involved in processing SaaS Data enters into a written agreement with Micro Focus, which includes confidentiality obligations substantially similar to those contained herein and appropriate to the nature of the processing involved.

Data Subject Requests

Micro Focus will refer to Customer any queries from data subjects in connection with SaaS Data.

Scheduled Maintenance

To enable Customers to plan for scheduled maintenance by Micro Focus, Micro Focus reserves predefined timeframes to be used on an as-needed basis.

A twenty-four-hour period once a quarter starting at 00:00 Saturday, in the local data center region, and ending at 00:00 Sunday.

- This window is considered an optional placeholder for major releases and events that could be significantly service impactful. If the window is to be exercised, and a major disruption expected, all Customers should be notified no later than ten business days before.

A two-hour maintenance window once a month starting Tuesday at 00:00, in the local data center region.

Service Description

Voltage Fusion

- This is for patching of environments. Patching should be done in a non-service disrupting fashion; however, some elements may require a brief outage to update properly. Customers will be notified at least five business days in advance if any actual service disruption is expected.

A four-hour maintenance window once a month starting Saturday, midnight in the local data center region.

- This time is set aside for system updates and product releases that cannot be performed without a visible Customer impact. Use of this window is optional, and Customers should be notified at least ten business days in advance if any outage is expected.

In case of any holiday conflicts, the regularly scheduled window will automatically fall to the following week on the same day of the week.

Micro Focus determines whether and when to apply a SaaS Upgrade for Customer's Voltage Fusion. Unless Micro Focus anticipates a service interruption due to a SaaS Upgrade, Micro Focus may implement a SaaS Upgrade at any time without notice to Customer. Micro Focus aims to use the Scheduled Maintenance windows defined herein to apply SaaS Upgrades. Customer may be required to cooperate in achieving a SaaS Upgrade that Micro Focus determines in its discretion is critical for the availability, performance, or security of Voltage Fusion.

Service Decommissioning

Upon expiration or termination of the SaaS Order Term, Micro Focus may disable all Customer access to SaaS, and Customer shall promptly return to Micro Focus (or at Micro Focus's request destroy) any Micro Focus materials.

Micro Focus will make available to Customer any SaaS Data in Micro Focus' possession in the format generally provided by Micro Focus. The target timeframe is set forth below in Termination Data Retrieval Period SLO. After such time, Micro Focus shall have no obligation to maintain or provide any such data, which will be deleted in the ordinary course.

Service Level Objectives

Micro Focus provides the following Service Level Commitments for the purpose of further measuring the quality of service that Micro Focus is delivering to the Customer.

Tenant Off Boarding SLO

Micro Focus guarantees a tenant off boarding time of two days from the time in which the Customer submits the formal written request. If a formal written request to delete Customer data is not submitted, off boarding of Customer data will take place as set forth below in Termination Data Retrieval Period SLO.

User Removal SLO

Micro Focus guarantees that after the completion of this request, analytical results about the removed user will no longer be stored or available within the application

Service Description
Voltage Fusion

SaaS Availability SLO

SaaS availability is defined as the Voltage Fusion production application being available for access and use by Customer and its Authorized Users over the Internet. Micro Focus will provide Customer access to the Voltage Fusion production application on a twenty-four hour, seven days a week (24x7) basis at a rate of 99.5 %.

Termination Data Retrieval Period SLO

The Termination Data Retrieval Period is defined as the length of time in which Customer can retrieve a copy of their SaaS Data from Micro Focus. Micro Focus targets to make available such data for download in the format generally provided by Micro Focus for 30 days following the termination of the SaaS Order Term.

Standard Service Requirements

Roles and Responsibilities

This section describes general Customer and Micro Focus responsibilities relative to the Voltage Fusion service. Micro Focus’s ability to fulfill its responsibilities relative to SaaS is dependent upon Customer fulfilling the responsibilities described below and elsewhere herein:

Customer Roles and Responsibilities

Customer Role	Responsibilities
Business Owner	<ul style="list-style-type: none">• Owns the business relationship between the Customer and Micro Focus• Owns the business relationship with the range of departments and organizations using Voltage Fusion Service• Manages contract issues
Project Manager	<ul style="list-style-type: none">• Coordinates Customer resources as necessary• Serves as the point of contact between the Customer and Micro Focus• Drives communication from the Customer side• Serves as the point of escalation for issue resolution and service-related issues
Administrator	<ul style="list-style-type: none">• Serves as the first point of contact for Voltage Fusion Service end users for problem isolation• Performs Voltage Fusion Service administration• Provides tier-1 support and works with Micro Focus to provide tier-2 support• Coordinates end-user testing as required• Leads ongoing solution validation• Trains the end-user community

Service Description

Voltage Fusion

	<ul style="list-style-type: none">• Coordinates infrastructure-related activities at the customer site• Owns any customization
Subject Matter Expert	<ul style="list-style-type: none">• Leverages the product functionality designed by Customer's Voltage Fusion Service administrators• Provides periodic feedback to the Voltage Fusion Service Administrator

Micro Focus Roles and Responsibilities

Micro Focus Role	Responsibilities
Customer Success Manager (CSM)	<ul style="list-style-type: none">• Serves as the Customer liaison to Micro Focus• Coordinates Micro Focus resources including system and process experts as necessary• Facilitates ongoing mentoring• Coordinates with the Customer during required and periodic maintenance• Oversees the Customer onboarding process
Service Operations Center Staff (SOC)	<ul style="list-style-type: none">• Primary point of contact for service requests. The Customer can contact the Service Operations Center for all services such as support and maintenance, or issues regarding availability of the Voltage Fusion Service• Provides 24x7 application support• Provides 24x7 SaaS infrastructure support
Operations Staff (Ops)	<ul style="list-style-type: none">• Monitors the Micro Focus systems and Voltage Fusion Service for availability• Performs system-related tasks such as backups, archiving, and restoring instances according to Micro Focus's standard practices

Assumptions and Dependencies

This Service Description is based upon the following assumptions and dependencies between the Customer and Micro Focus:

- Customer must have internet connectivity (ports 9000-9999 range) to access this Voltage Fusion Service
- Voltage Fusion Service will be performed remotely and delivered in English only
- A SaaS Order term is valid for a single application deployment, which cannot be changed during the SaaS Order term
- The service commencement date is the date on which Customer's Order is booked within the Micro Focus order management system
- The Customer data indexed during the ingestion process requires the data location information be made available to Micro Focus to analyze the data
- Customer must ensure that its administrators maintain accurate contact information with Micro Focus SaaS

Service Description

Voltage Fusion

- Customer has determined, selected, and will use options in the Customer environment that are appropriate to meet its requirements, including information security controls, connectivity options, and business continuity, backup, and archival options
- Customer will establish and follow secure practices for individual account-based access for accountability and traceability

Furthermore, this Voltage Fusion Service is provided based on the assumption that Customer will implement and maintain the following controls in its use of Voltage Fusion Service:

- Configuring Customer's browser and other clients to interact with Voltage Fusion Service
- Configuring Customer's network devices to access Voltage Fusion Service
- Appointing authorized users
- Configuring its Voltage Fusion Service account to require that end user passwords be sufficiently strong and properly managed
- Procedures for access approvals, modifications, and terminations

Good Faith Cooperation

Customer acknowledges that Micro Focus's ability to perform the Services depends upon Customer's timely performance of its obligations and cooperation, as well as the accuracy and completeness of any information and data provided to Micro Focus. Where this Service Description requires agreement, approval, acceptance, consent, or similar action by either party, such action will not be unreasonably delayed or withheld. Customer agrees that to the extent its failure to meet its responsibilities results in a failure or delay by Micro Focus in performing its obligations under this Service Description, Micro Focus will not be liable for such failure or delay.
