

Cryptsoft KMIP Client Integration with ESKM

Cryptsoft and Micro Focus® ESKM deliver cohesive and reliable interoperable enterprise key management solutions.

About Micro Focus Security

Micro Focus is a leading provider of security and compliance solutions for the modern enterprise that wants to mitigate risk in their hybrid environment and defend against advanced threats. Based on market-leading products from ArcSight, Fortify, and Micro Focus Data Security, the Security Intelligence Platform uniquely delivers the advanced correlation and analytics, application protection, and data security to protect today's hybrid IT infrastructure from sophisticated cyber threats.

Cryptsoft Solution Overview

Cryptsoft recognizes the value of interoperable, enterprise-wide key management driven by the requirement for greater volumes of encrypted data across large and small enterprises. Cryptsoft and Micro Focus combined offer enterprise secure key management capabilities for tape libraries, disk arrays and other key management environments and solutions. Cryptsoft works with Enterprise Secure Key Manager (ESKM) to deliver cohesive, reliable, and interoperable enterprise key management (EKM) solutions to Micro Focus customers.

ESKM Solution Overview

Enterprise Secure Key Manager is an enterprise key manager that supports all types of

Micro Focus storage and server data protection solutions, as well as supports Micro Focus partners and third-party environments through OASIS KMIP compliant clients to follow security information and event management (SIEM) best practices. ESKM is the first commercial KMIP server to be certified as conformant under the OASIS SSIF KMIP Conformance Test Program (snia.org/forums/SSIF/kmip). ESKM customers need to effectively secure and protect their data at rest. They desire to ensure data availability, eliminate risk of data loss, maintain compliance, and reduce operational costs. They need an enterprise key manager to automate the management & control of policies that protect and control access to their business-critical encryption keys.

Cryptsoft and ESKM Integration

- Micro Focus has successfully completed interoperability testing with Cryptsoft and verified that the ESKM interoperates with Cryptsoft.
- Cryptsoft provides a range of software development kits (SDKs) that enable Micro Focus partners, customers, and integrators rapid enhancement of their products and services to support the standards-based ESKM, a secure, scalable, and reliable enterprise key manager.
- Cryptsoft KMIP technology is available on multiple platforms in multiple programming languages maximizing the range of

industry-leading encryption and security solutions that are able to integrate with ArcSight ESKM for storing, retrieval, and use of cryptographic keys and other security objects.

- Both companies are active contributors or members of the OASIS KMIP interoperability program and the SNIA SSIF KMIP Conformance Test Program.
