

Cybersecurity Solutions for Mission Assurance

Micro Focus® security products come with best-of-breed technology and comprehensive cyber protection. We offer the only integrated security platform that proactively finds, manages, and prevents enterprise risks and threats at near network speed. Our proactive approach ensures that applications are built and run securely, data is always defended from theft, users are known and granted appropriate access to resources, and all security information is correlated as well as analyzed to provide a 360-degree view of your enterprise.

Software Security Assurance and the Joint Federated Assurance Centers (JFAC)

Micro Focus Government Solutions offers a preventive approach to Software Security Assurance (SSA), moving from a reactive, expensive-fix process to a comprehensive proactive solution encompassing source code reviews to defending production systems. Looking at software source code enables your organization to discover the “unknowns” that are often used in an attack. Our cutting-edge software security products address the root causes of vulnerabilities by fortifying the software that runs critical agency applications. From inception to deployment, using Agile methodologies and DevOps, we help prevent penetration of your systems through vulnerable code. Whether your applications are legacy, mobile, developed in-house, third party, or open source, our advanced software products identify weaknesses so they can be monitored, tracked, and resolved.

Continuous Diagnostics and Mitigation

Micro Focus Government Solutions offers a complete security portfolio to maintain secure data environments and meet agency missions. Our Continuous Diagnostics and Mitigation (CDM) approach reduces compliance to four

simple, integrated steps. We provide industry-leading, best-of-breed cybersecurity products to modernize agency infrastructure for improved efficiency and increased protection of networks and information systems. Our easy-to-deploy and easy-to-use security management products test assets for vulnerabilities before they launch, and monitor all assets in production to catch events in near real-time, while reducing the number of events requiring manual management. With Identity-Powered Access solutions, you can quickly and cost-effectively integrate Identity and Access Management (IAM) policies across local, mobile and cloud environments. And preparing for future phases, Micro Focus offers an end-to-end data encryption capability to lock down all government High Value Assets, restricting access to those with a need to know.

Government-Ready Solutions

As one of the U.S. government’s largest cybersecurity providers, Micro Focus Government Solutions security products not only support government standards, but also help define them. For example, Micro Focus data security researchers are the inventors of the latest National Institute of Standards and Technology (NIST) standard on format-preserving encryption (SP 800-38G). We also support Section 508 enhancements for Americans with disabilities,

Common Criteria, and Federal Information Processing Standard (FIPS) 140-2 where appropriate, and Micro Focus Fortify on Demand was the first software security cloud service to achieve full Federal Risk and Authorization Management Program (FedRAMP) certification.

Micro Focus ArcSight

Intelligent Security Operations

Monitor, correlate, and analyze information for complete visibility, security, and situational awareness across your entire IT infrastructure. ArcSight combines Security Information and Event Management (SIEM), log management, and user activity monitoring to stop threats and mitigate risks across networks by correlating system events, information flow, and user and applications activity in near-real-time.

- Application View
- ArcSight Data Platform (ADP)
- Enterprise Security Manager (ESM)
- ESM Risk Insight
- Express
- ThreatDetector
- Threat Response Manager
- Reputation Security Monitor (RepSM)
- User Behavior Analytics (UBA)
- Hundreds of partner connectors

Micro Focus Data Security Solutions

Data-Centric Security End-to-End

Micro Focus data security solutions drive leadership in data-centric security and encryption solutions. With over 80 patents and 51 years of expertise, we protect the world's largest brands and neutralize breach impact by securing sensitive data at rest, in use, and in motion.

Our solutions provide advanced data encryption, tokenization, and key management that protect sensitive data across enterprise applications, data processing IT, cloud, mobile, payment ecosystems, mission-critical transactions, storage, and Big Data platforms. The solutions solve one of the government's biggest challenges—how to simplify the protection of sensitive data in even the most complex use cases.

- Atalla Network Security Processors (HSM)
- Enterprise Secure Key Manager (ESKM)
- SecureData Enterprise
- SecureData Mobile
- SecureMail

Micro Focus Fortify

Application Security across the SDLC

Secure software applications from the inside whether developed in-house, legacy, mobile, third party, or open source. Network defenses alone can't safeguard applications completely.

Fortify offers the first on-premises application self-protection capability. It finds security vulnerabilities in applications in production, providing immediate visibility, optional real-time protection, and notifying ArcSight operators to take remedial action against attacks.

On-premises:

- Application Defender
- Static Code Analyzer (SCA)
- Software Security Center (SSC)
- WebInspect

Cloud-based:

- Application Defender
- Fortify on Demand (FoD)

Micro Focus Net IQ

Identity and Access Management

Use integrated identity information to create and manage identities and control access to enterprise resources. We provide identity and access management, single sign-on (SSO), access governance, and more.

- Access Manager
- Advanced Authentication
- CloudAccess
- Directory and Resource Administrator
- Identity Governance
- Identity Manager
- Privileged Account Manager
- Secure Login
- Self Service Password Reset

The Complete Cybersecurity Solution from Micro Focus

Micro Focus security products come with best-of-breed technology and comprehensive cyber protection. We offer the only integrated security platform that proactively finds, manages, and prevents enterprise risks and threats at near network speed. Our proactive approach ensures that applications are built and run securely, data is always defended from theft, and all security information is correlated as well as analyzed to provide a 360-degree view of your enterprise.
