Modern Workloads

Micro Focus Data Protector for Cloud Workloads provides a stable, agentless backup and snapshot-management solution for Microsoft 365 virtual machines, containers, and storage providers working on-prem and in the cloud. Data Protector for Cloud Workloads supports multiple backup destinations for convenient data storage planning, including local filesystem or an NFS/CIFS share, or object storage (cloud providers), and can connect to Data Protector for wider infrastructure backup targets including VM and tape.

Microsoft 365

Get the whole package of necessary tools to reach your business workflow's highest performance and safety requirements. Backup and recover Microsoft cloud application and services data with ease and confidence: Exchange Online, SharePoint Online, OneDrive for Business, and Microsoft Teams.

Cyber-Attack Protection

As organizations are adopting hybrid working models the cyber-attack efforts are widening and increasing in complexity. Chances are you're going to face a security threat or data breach at your organization. Data Protector for Cloud Workloads increases visibility for cloud environments and provides comprehensive protection for business-vital data. No matter what happens—a natural disaster, ransomware, or a data breach, you will be ready.

Enjoy industry-leading data protection for peak operational effectiveness, productivity, and security with Micro Focus Data Protector for Cloud Workloads.
