

# eDiscovery—ECA, Analytics and TAR

Micro Focus® eDiscovery is an all-in-one solution for processing, culling, early case assessment, review, and production. Technology-Assisted Review (TAR) ensure counsel can quickly and confidently cull out non-responsive material and focus on what is most relevant to the project.

## eDiscovery at a Glance:

- + Unified, intuitive application for seamless ECA, analysis, review and production
- + Text, audio, and voice together with structured data on a single platform
- + Technology-Assisted Review accelerates review and increases accuracy
- + Virtually unlimited scalability

## Micro Focus's Complete eDiscovery Solution

To support rigorous litigation cycles, our customers require an eDiscovery solution that not only reduces cost and risk, but is simple to use, automates processes, and includes powerful workflow capabilities. eDiscovery unifies early case assessment, document review, and production into a single application that leverages Technology-Assisted Review (TAR), advanced analytics, and policy-based, automated workflows to simplify the review process. Micro Focus eDiscovery operates in conjunction with Micro Focus Digital Safe to provide a suite of end to end governance solutions.

### Key Benefits

- Proven successful handling of significant and complex cases
- Massively scalable platform with virtually unlimited capacity, currently hosting over 50 petabytes of private cloud data across world-class data centers
- Comprehensive and defensible solution allows you to access hundreds of file formats (including audio and video) in hundreds of languages, for comprehensive search and discovery
- Reduce overall eDiscovery costs with automated workflow and accelerated document review
- Reduce risk by limiting the exchange of data between disparate systems during

discovery and by maintaining chain of custody to mitigate risk of data spoliation

## eDiscovery Capabilities

eDiscovery software solution delivers a broad set of unique capabilities to streamline the eDiscovery process, including:

### Early Case Assessment (ECA)

#### DATA ANALYTICS

eDiscovery provides access to hundreds of data types and the ability to analyze and understand and act on them. Our patented software helps provide an understanding of your data so you can search by ideas and concepts—far beyond traditional keywords—to quickly and efficiently cull large volumes of information so you can put the early in early case assessment.

- Full text indexing of all processed content
- Automatic data relationship analysis
- Understand hundreds of languages and file types

#### VISUAL ANALYTICS

Cull and prioritize large volumes of data to make initial case or investigatory decisions using practical visualization tools:

- 2D concept cluster maps for investigations and prioritization
- Communication Link maps for networking analysis to uncover hidden custodians
- Parametric searches for enhanced filtering

## Review and Analytics

### INTUITIVE AND CUSTOMIZABLE INTERFACE

At the heart of eDiscovery is an advanced, user-friendly review tool that, although web-based, feels and functions like a desktop application.

- Familiar 'inbox' look and feel
- Perform basic linear review, complex non-linear review, or a mixture of both
- Built-in, automated, policy-based workflow for early case assessment and high productivity document review

### TECHNOLOGY-ASSISTED REVIEW

A pioneer in Technology-Assisted Review, Micro Focus is a market leader in applying predictive technology to expedite the analysis of large volumes of data which ultimately allows customers to drive significant savings into document review, which generally accounts for the majority of total eDiscovery time and cost.

- Facilitate review using dynamic, real-time coding recommendations regarding relevance to one or more issues in a matter
- Dramatically accelerate ECA and increase accuracy over linear, human-only review by applying uniform objectivity
- Speed and simplify quality assurance by creating exemplar or training sets

### Investigations

As part of a larger information governance platform, eDiscovery can create additional

value and return on investment when used for investigatory, event-driven purposes such as human resources or business conduct issues.

- Rapidly cull down data to relevant topics using text analytics
- Utilize visual analytics to uncover unknown issues

### eDiscovery Processing and Production

Micro Focus' eDiscovery team processes data for large complex litigation matters. In addition to using the market leading platform, our customers get proven eDiscovery services to process data.

- Process hundreds of file types, including instant messages, audio, web interactions, and imaged documents on the same platform
- No need for performance optimization techniques such as "jump outs" or partial document indexing

### Summary

In today's challenging business environment, Micro Focus' advanced eDiscovery solutions are designed to help you handle the most pressing litigation and investigation challenges. eDiscovery delivers a true enterprise solution that gives you the ability to drive eDiscovery processes from a single, unified solution, reducing the need to move data, constantly re-ingest and re-index, or perform risky hand-offs of information between systems.
