

Meeting Today's Data Governance Challenges Using File Governance Suite

Regulations, data breaches, ransomware, and compliance audits are just some of the many factors that are contributing to the expanding requirements of data governance. The Micro Focus® File Governance Suite addresses these and other issues through comprehensive data reporting and analytics, followed by a powerful engine that automates data governance tasks to optimize, secure, and protect your network data while helping you meet your compliance requirements.

Data Governance Suite at a Glance:

■ File Reporter:

Lets you take charge of data security and growth by showing you what you're storing and who has access to it.

■ File Dynamics:

Automates the expanding tasks associated with today's data management requirements including regulatory compliance, remediation, and data protection.

Today's Data Governance Requirements

Organizations rely on data to make their decisions. Whether an organization's objectives are to optimize its operations, create new products and services, or improve profitability—it's the data that will be the ultimate influencer in decisions and directions.

But as the amount of stored data within organizations has grown exponentially, new data management challenges are being introduced. These include:

- What data are we storing and what is its value?
- Which files should we retain, archive, and delete?
- Where are our high-value targets and how should we protect them?
- Are we in compliance with data storage regulations?
- How can we assure that confidential data is being accessed by only authorized personnel?
- How can we automate our data management processes?
- And many others

The Micro Focus File Governance Suite is a full set of file governance tools to help you address these and other data governance challenges in your Microsoft Windows network. Comprising Micro Focus File Reporter and Micro Focus File Dynamics, the File Governance Suite lets you know what files you're storing, their relevancy, who has access to them, if any contain personal or confidential information that needs to be secured, and much more. Then it lets you establish policies that can manage and even remediate issues that need to be addressed.

File Reporter

File Reporter inventories network file systems and delivers the detailed file storage intelligence you need to optimize and secure your network for efficiency and compliance. Engineered for enterprise file system reporting, File Reporter gathers data across the millions of files and folders scattered among the various network storage devices that make up your network. Flexible reporting, filtering, and querying options then present the exact findings you need so that you can demonstrate compliance or take corrective action.

www.microfocus.com

File Reporter identifies files currently on the network, whether the files contain sensitive or personal information, the size of the files, when users last accessed or modified the files, the locations of duplicate files, and much more.

Additionally, File Reporter helps calculate storage costs and identifies access rights to folders and consequently, the files that are contained within.

File Dynamics

File Dynamics provides extensive services to address the expanding requirements of network data management. Identity-driven policies automate tasks that are traditionally done manually, resulting in cost savings and assurance that tasks are being performed properly. Target-driven policies offer data migration and relocation, cleanup, and protection from data corruption and downtime through nearline storage backup of high-value targets, enabling quick recovery of files and their associated permissions.

File Dynamics is engineered to alleviate the network file system management workload of administrators while helping them reach their regulatory compliance objectives. In so doing, File Dynamics:

- **Manages Data Growth** by automatically moving, archiving, grooming, and deleting files.

- **Automates and Enacts Data**

Management Tasks by provisioning user and group storage locations, performing on-going management tasks for these storage areas, and cleaning up storage.

- **Secures Files** by setting access permissions, reporting, and providing the means of demonstrating compliance in a security audit.

- **Protects Files** by providing the ability to archive and quickly recover critical data that has become lost or corrupted.

Today, the technology in File Dynamics manages the data of millions of users and groups in hundreds of accounts across all industries.

An Integrated Product Suite

Working together, File Reporter lets you know what measures you might need to take to address problems pertaining to your network storage, then File Dynamics provides you the means to do so through automated policies.

File Reporter can even output reports that can be imported into File Dynamics tools to remediate the locations of files containing personal or sensitive information.

Both products are powerful on their own, but combined in the File Governance Suite, they are an unbeatable solution for addressing your data governance objectives.
