

More Than Just Hybrid Cloud Hybrid IT

Micro Focus® Hybrid Cloud Management provides a cloud management platform that gives you the agility, visibility and control you need to design, deliver and manage IT services using any cloud, container or infrastructure so you can deliver hybrid IT services—not just hybrid cloud.

Hybrid Cloud Management at a Glance:

■ Design:

Create simple cloud offerings in just a few clicks, cloud-agnostic designs to “design once—run anywhere,” or complex, multi-tier service offerings.

■ Deliver:

Your users place their order from the self-service catalog for delivery of fully automated deployments.

■ Manage:

You can track costs and control usage to manage your hybrid IT services using any cloud, container or infrastructure.

IT Operations Is Hard Work

IT operations is expected to adapt fluidly to new technologies, effortlessly adopt new cloud vendors and other services chosen by the business, and seamlessly provision, upgrade and care for existing application workloads.

All this must be done while supporting new applications—which are being introduced with an ever increasing release frequency. This must also be achieved in many cases with reduced staff, less budget, and zero impact on service quality. In fact, you may be expected to increase service quality and speed of delivery.

Solution Overview

Micro Focus has created the Hybrid Cloud Management (HCM) suite to address two fundamental requirements of IT operations teams:

- **Increase agility:** Improve speed and responsiveness to be more agile.
- **Improve efficiency:** Increase the productivity of IT teams and use resources more effectively.

HCM provides a proven cloud management platform with an enterprise grade orchestration engine for end-to-end service delivery. It enables you to manage hybrid and multi-cloud environments, containers and traditional IT infrastructure to go beyond hybrid cloud and deliver hybrid IT services.

Reusable Service Designs

Power your cloud initiatives with reusable, cloud-agnostic service designs to deploy and manage services for any environment, any technology and any application. Design a service once, and users can order it anytime and run it anywhere—anywhere their permissions allow, of course.

Simple But Powerful Self-Service Portal

Simplify cloud offerings with flexible, attribute-based service designs that accommodate variations in a single offering. Unify catalogs from multiple cloud vendors into a single portal for a consistent user experience. Control access to services with enterprise-grade multitenancy options and customizable permissions.

Workload and Cost Analytics

Optimize workload placement, and continuously improve your cloud service delivery through the use of cloud analytics, capacity planning and showback reporting.

Enterprise-Grade Orchestration

Orchestrate complete IT actions and processes across silos including the direction of third party automation and orchestration tools. Automate IT processes easily with the intuitive workflow designer and execution engine. Accelerate development and enable infrastructure as code with text authoring.

Quick Integration with Your Current Ecosystem

Leverage the extensive content library of over 8000 out-of-box operations and workflows. Access the “app store style” library to consume the latest content packs. Use wizards and open APIs to quickly create custom integrations.

Catalog Aggregation and Brokering

Aggregate services from public cloud providers, and create a service offering with a few clicks. Users can subscribe to offerings from multiple vendors in the same catalog, and you can track usage, control costs and enforce governance policies.

Simplified Implementation and Upgrade

Minimize implementation and upgrade efforts with pre-integrated, containerized components based on open-source Docker containers and Kubernetes technologies. With a container-based foundation, you can deploy the HCM suite quickly and easily scale out as necessary. Get access to new features frequently with quarterly updates that are easy to apply.

Not Just Hybrid Cloud—Hybrid IT

The Hybrid Cloud Management suite is an end-to-end solution that offers the flexibility and simplified operations you need to increase agility and efficiency in a heterogeneous, hybrid IT environment. Automate mundane tasks and orchestrate processes across domains, systems, and teams to accelerate hybrid IT delivery. Create comprehensive service designs and leverage a unified self-service portal to provide
