

# New Server Automation Customer Appreciation Program Offers No Cost License Exchange to DCA Premium

Micro Focus Data Center Automation (DCA) Premium delivers additional value well beyond the capabilities of Server Automation, and as a valued customer you can now take advantage of a no cost 1:1 license exchange program to explore that value!

**“We centralize and automate. We reduce human error and duplication of effort—and add tracking, reporting, and trending. We manage compliance across platforms more productively, with higher business value.”**

**CHRISTOPHER MAPES**

Technical Staff, IT Cloud Services  
Verizon

Micro Focus Data Center Automation (DCA) is packed with features and capabilities that help you streamline and automate your service governance process from end-to-end. With DCA you'll gain real-time visibility into the risk and compliance states of your data center servers, you'll reduce manual, error-prone processes as well as handoffs between different teams and silos, you can achieve continuous compliance management so you'll always be audit ready, and you can integrate with existing software and tools—including your existing Server Automation installation—to achieve ROI more quickly.

**Why Data Center Automation?**

As hybrid enterprises evolve, the role that the operations team plays within an organization

is becoming increasingly more challenging. Faced with increasingly complex compliance standards, never ending security vulnerabilities, and agile development methodologies that require infrastructure provisioning on demand, operations teams need to streamline and automate their infrastructure and service governance processes to ensure business continuity. Data Center Automation enables operations teams to take a proactive approach to these challenges by including key functionality such as its actionable risk and compliance dashboards, its service level objective (SLO) based patching and compliance actions, an advanced process orchestration engine, enhanced reporting, and a broad range of integrations with the Micro Focus ITOM solutions as well as third-party tools. And the best part

DCA Features & Capabilities	DCA Premium
<b>Security Patching</b>	
Patch scan, discovery and remediation	Yes
Vulnerability scoring and Risk Dashboard	Yes
Smarter SLO-based Patching to prevent breaches	Yes
<b>IT Compliance</b>	
Compliance scan, discovery, and remediation	Yes
Compliance Dashboard	Yes
SLO-based Compliance to help meet SLAs	Yes
Provisioning, Configuration Drift, Global Shell	Yes
<b>Other Features</b>	
Streamline Infrastructure Operations through Orchestration	Infrastructure Orchestration
Real-time & Historical Reporting (COSO based)	Yes
Host connectivity via Agent	Yes
Agentless management option	Yes

**Figure 1.** DCA Premium features and capabilities. Items shown in blue are value-added capabilities not available in Server Automation.

is, you don't have to stop using existing Server Automation installation. DCA integrates with Server Automation seamlessly, giving you added value while minimizing the impact to your existing processes.

### Data Center Automation Delivers the Following Key Capabilities as Compared to Server Automation

#### Actionable, Drill-Down Risk and Compliance Dashboards Provide Real-Time Visibility into Your Datacenter

DCA includes both risk and compliance dashboards that provide real-time insight into the state of your datacenter resources, allowing you to quickly assess and prioritize vulnerabilities within your datacenter. DCA brings in Critical Vulnerabilities and Exposure (CVE) data from National Vulnerability Database and combines that with scan results in the risk dashboard. From the risk dashboard you can quickly view risks by severity, type, age, the number of resources affected as well as see weekly trends within your datacenter. Drilling down into the different sections allows you to view more detailed information to help you assess and prioritize your remediation efforts and greatly reduce your risk exposure.

#### Continuous Compliance Management to Always Meet Your SLAs

DCA comes out of the box with market leading compliance content for standards such as PCI DSS, FISMA, SOX, HIPAA, CIS, and more. Scan your data center servers against these benchmarks, or create your own custom benchmarks to suit your needs. After scanning, any compliance variances that are found can be mapped back to the specific section within the applicable benchmark, making it easier for you to troubleshoot and prioritize. Using DCA's SLO-based scheduling and advanced orchestration engine you can set up

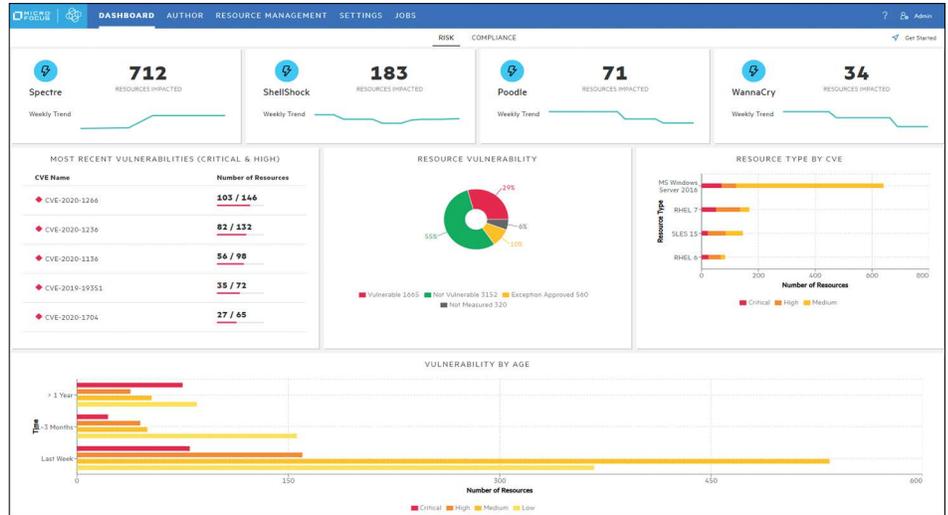

Figure 2. DCA's actionable risk dashboard gives you real-time visibility into the risk state of your datacenter.

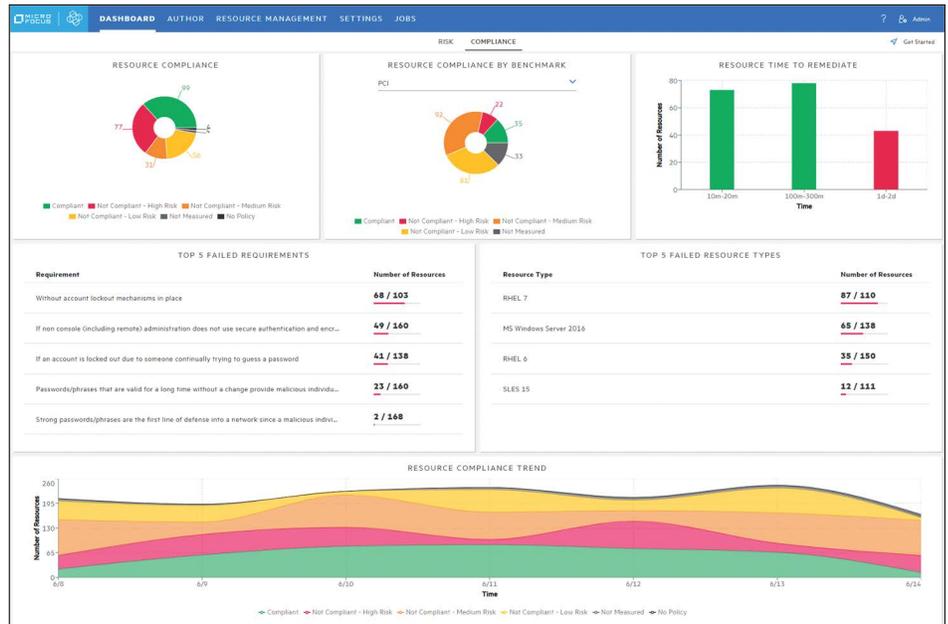

Figure 3. DCA's compliance dashboard provides a single view to assess the compliance state across data center resources.
