

Re-Use, Re-Host, Refresh. The Trusted Choice for Application Re-Hosting

Every major IT decision you make must align with business strategy, firmly positioning the company for future growth and competitive differentiation. So, when it comes to enterprise application modernization, there's only one organization with the technology, skills and experience to deliver. Micro Focus offers a robust and proven way for you to redeploy your COBOL applications to a new, modern platform. With over 1,000 completed projects, we have the capability and credibility to help you get ready for the demands of digital business.

“After moving to Visual COBOL, we saw faster transaction processing speeds, with improvements as high as two to three times their original levels. These performance advancements in our application portfolio have revolutionized the way in which we work and service our customers, reducing our overnight batch processing window and its associated costs.”

ALEJANDRO WYSS

CIO

Caja de Valores S.A.

Unleash Your COBOL Applications

Your valuable, established COBOL applications power the core system operations that support your business. Those applications are a valuable asset and can be easily reused to support business innovation—but the power of your COBOL business-critical applications is restrained by infrastructure built on rigid, outdated proprietary hardware. That proprietary hardware isn't designed to support today's rapid pace of business change, let alone the next wave of cloud, mobile, and next-generation architectures.

Unleash the COBOL applications that give you a competitive advantage from outdated infrastructure hardware—move them up to modern architecture by re-hosting them. Micro Focus® application re-hosting is a simple, easy, and cost-effective way to achieve this goal.

Micro Focus offers an incremental strategy for modernizing core business systems—we can tailor that strategy for your specific situation. With this incremental strategy, you can reduce application TCO and dependency on proprietary hardware. Our approach reduces business risk by preserving your hard-earned

investments in your COBOL application logic and data.

Customer Results

Micro Focus is the industry leader in application re-hosting. Our track record in delivering fast, easy, and cost-effective application modernization, supported by high-quality, proven technology, is unrivaled. Micro Focus can help you with every aspect of your rehost journey so you can experience results like this:
