

Vibe Deployment

Micro Focus® Vibe® improves workplace collaboration by bringing people, projects and processes together to increase your organization's productivity. The easiest and quickest way to deploy Vibe is with help from Micro Focus Consulting and its partners. Start realizing the benefits of our next-generation collaboration tools by engaging our highly skilled professionals today.

Micro Focus Consulting at a Glance

■ Assessment:

Experts assess your business goals and technical requirements for implementing the solution

■ Construction and Transition:

After assessment, experts install, configure, test, and deploy the solution

Micro Focus and its partners can craft a Vibe deployment approach that's tailored to your specific situation—providing help when you need it, where you need it.

Vibe

Vibe is the next-generation collaboration tool that will help customers connect people to performance and business possibilities. In addition, it will improve productivity, lower business costs, ensure security and integrate with your mixed environment.

What Is a Vibe Deployment Engagement?

Whether you are just starting out or attempting to migrate your existing solution to Vibe, Micro Focus Consulting and its partners can assist you. If you are new to Vibe, deployment is critical to your success, especially with demanding end users. If you are migrating from an existing solution or legacy product, vendors may not provide tools to easily move your data.

Planning and expert advice can help you mitigate risk and avoid pitfalls in either of these scenarios. A Vibe Deployment consulting engagement allows you to quickly realize the benefits of the product, such as team workspaces, blogs and wikis and document sharing.

Stages of a Vibe Deployment Engagement

Vibe Deployment consulting engagements vary from simple to complex. This depends on the size of your implementation, whether you're migrating data from another collaborative platform, the degree of customization and/or integration required and other factors. All deployments follow the same successful process, and are outlined in the following stages.

Requirements Assessment

Subject matter experts will identify your current use cases, business requirements and needed functionality. Experts will meet with key individuals to identify business goals and technical requirements, and the following steps will be used to plan the deployment:

- Work with your project manager to identify and interview staff who will support the Vibe deployment
- Discuss IT considerations, such as compliance with corporate security policies, and server sizing and scaling

Contact your representative or partner, or your Services Executive, to learn more about how Vibe deployment services can benefit your organization. Together, we can craft a Vibe deployment approach that is tailored to your specific situation—providing help when you need it, where you need it.

- Leverage Vibe functionality to facilitate use case(s), such as:
 - Workflows and custom forms tailored to your business processes
 - Workspaces and folders configured to meet specific business functions
 - Review needed customizations or integrations, such as:
 - A tailored user interface, or skin, to match your corporate look and feel
 - Integration or data exchange with third-party systems
 - Custom Vibe applications that leverage the robust API and development environment
 - Develop a deployment review report, including a project schedule
- Summarizes the results of our interviews and questionnaires
 - Identifies issues that may impact the success of your deployment
 - Includes a high-level architecture diagram
- A healthy Vibe environment preconfigured for desired use case(s)
 - Vibe customizations and/or integrations if any were identified in the requirements assessment phase

Micro Focus Consulting and Partners

Vibe deployments are conducted by a combination of our partners and consultants, and can include:

- Senior technical consultants, architects, project leaders and support resources
- Micro Focus engineering resources

We know how to complete your Vibe deployment on time and on budget. Your complex collaboration solutions require skills and expertise, and no one has more experience deploying our products than Micro Focus Consulting and our partners.

About Micro Focus

Since 1976, Micro Focus has helped more than 20,000 customers unlock the value of their business logic by creating enabling solutions that bridge the gap from well-established technologies to modern functionality. The two portfolios work to a single, clear vision—to deliver innovative products supported by exceptional customer service. www.microfocus.com

Construction and Transition

After an agreement is reached on the deployment scope and schedule, Micro Focus Consulting or partners will perform the deployment. This stage includes the following steps:

- Vibe software installation and configuration
- Develop, test and execute required data migration tools
- Configure, test and deploy Vibe use case(s)
- Develop, test and deploy Vibe customization and/or integrations
- Hold a post-deployment review meeting

Deliverables

Vibe deployments typically yield the following deliverables:

- A deployment review report that:
